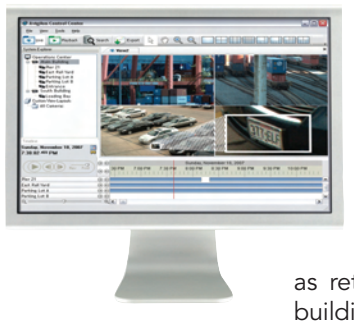
THE SECURITY INDUSTRY'S PRODUCT GUIDE

Avigilon Control Center Core



Avigilon is addressing the security needs of small businesses with the newest edition of its Avigilon Control Center Core software. This entry-level version of the already award-winning network video management software delivers advanced high-definition surveillance capabilities, ease of use and superior image quality to small businesses. Many small businesses — such as retailers, convenience stores and small office buildings — face security concerns similar to those of larger companies, but they are constrained by smaller budgets and a lack of dedicated security staff. As a result, small businesses are increasingly looking for affordable, easy-to-use HD surveillance systems. Leveraging Avigilon's High-Definition Stream Management (HDSM) technology to achieve the best possible image quality while using less bandwidth and less powerful workstations for lower costs, Avigilon Control Center Core delivers the following features and benefits:

- A complete system for reviewing live and recorded HD images;
- Accommodates conventional and PTZ analog cameras, as well as a broad range of third-party IP cameras and encoders, enabling a budget-conscious migration to HD;
- Simple and intuitive user interface for full control over surveillance video playback to quickly retrieve evidence; and
- Robust searching enables quick and accurate navigation of large amounts of recorded HD video with camera-specific event logs.

Now, small businesses can customize an effective security solution that works for them.

NAPCO Combo Burglar/Fire Systems

Napco Security Technologies Inc., recently introduced its Napco Commercial Platform™, a full line of Commercial Fire or Combo Intrusion/ Fire Systems configurable for wireless, hardwire, analog, addressable or conventional technology devices.

Meticulously engineered to plain do more, the NAPCO Commercial Platform includes built-in labor savings, incredible power, and feature-rich value that's easy to plan-out and standardize on for 255, 128 or 32 points of commercial wireless, analog addressable and/or 12V conventional installations; and it is fully compliant with the most rigorous industry standards, including UL864 9th Ed., NFPA72, SIA CP01 and more.

Knowing what a real-world installation requires, the system features more value-adds built in, all on-board: 7 Amps of power, 4 NACs (expandable), built-in, dual line DACT and strobe/horn synch module.

More handy features include easiest AHJ calcs: up to 32AH standby separate for burg and fire; and remote /onsite uploadable analog smoke sensitivity reporting. The line includes a full complement of peripherals and wireless, analog, addressable and conventional devices listed for use with it, plus NAC extenders and 24V & 12V Regulated Power Supplies backward compatible for all Gemini Control Panels. Ask for the NAPCO Commercial Platform at your Napco distributor. Free training certification classes and overviews are given both as webinars & in the field and earn security professionals up to 8 ceu credits. Go to napcosecurity.com/training for more details.

SARGENT Profile Series

The SARGENT Profile Series v.S1 (PoE) and v.S2 (WiFi) IP-Enabled Locks take advantage of existing network infrastructure to provide advanced security and easier, more cost-effective installations. Available in exit device, mortise and cylindrical lock configurations, they offer reliable communication, advanced management capabilities, and real-time alarm notification.

The Profile Series v.S1 and v.S2 locks feature ANSI/BHMA Grade 1 hardware and are available with HID® 125 kHz proximity or 13.56 MHz iCLASS® technology, and optional keypad.

The SARGENT Profile Series v.S1 brings the power of the network to door hardware. It uses IEEE 802.3af Power over Ethernet (PoE)-enabled network infrastructure for both power and data and provides the same real-time communication as traditional access control. Non-proprietary cable, PoE switches, and midspans facilitate cost-effective installations.

The Profile Series v.S2 intelligent WiFi locks offer the ability to extend the reach of your access control systems using a building's existing 802.11b/g WiFi infrastructure. The v.S2 offers complete access control functionality and is ideal for locations where it would be difficult or cost-prohibitive to install a wired lock.

Trine Electric Strikes

Trine introduces the new 4850-PoE and 4850-LCD. The low current draw, no cutting to install, and flexible design combines to make this a versatile option for PoE and access control systems of any type.

Trine Access Technology designed the 4850-PoE and 4850-LCD to work within PoE environments, automatic door installations, or various access control systems (such as Com, card readers/proximity, and keypads). These electric strikes help to eliminate the need for an additional power supply for the strike or to reduce its size for every day installations.

The 4850-PoE requires .260 mA (3.12 Watts) at 12DC, and the 4850-LCD require .135 mA (3.24 Watts) at 24DC, which meets the requirements for .300 mA systems or provides additional flexibility for .500mA and higher systems. The low current draw allows the use of smaller and less expensive power supplies when installing any access control system.

Just like Trine's standard 4850 electric strike, the 4850-PoE provides four-strike thicknesses (1/2", 5/8", 3/4" and 7/8") by supplying two spacer plates. The patented 6-pin anchoring system provides the highest level of strength and stability for any surface mounted strike — making this the strike for rim panic devices.

Save money on your power supply on every day installations — Try a 4850-PoE or 4850-LCD today.

ACCESS CONTROL & DOOR HARDWARE

Standalone & Wireless Networked Access Control Solutions

Alarm Lock Systems is known to hospitals, schools, government, airports, firms and more as the leading provider of reliable, cost-saving standalone or wireless networked access control solutions for every application, door and opening.

Scalable, interoperable, dependable. Both physical security- and IT-Department-friendly. Free Window-based software. Lowest maintenance costs.

Choose Trilogy® standalone locks or Networx™ networked wireless models, all promise to be a robust access control alternative at a fraction of the cost of hardwired access, installed in about an hour.

The broadest line of advanced electronic locks, Alarm Lock has coded or HID® ID access locks in Grade 1 cylindrical or mortise styles, and special application models, such as: Dual-sided, narrow stile glass door, buttonless vandal-proof, privacy & global lockdown locks, exit trim models, audit-trail keypads and a wireless keypad solution for use with strikes and mags.

Field-proven dependable, Alarm Lock is the right choice, especially when budgets and time are scarce and access needs are great. Contact your Alarm Lock Sales rep, call 1-800-ALA-LOCK or visit www.alarmlock.com

Quantum Secure SAFE Suite

Traditional ways of managing physical access directly within physical access control systems (PACS) present considerable challenges. These include multiple PACS which are disparate and also not integrated with logical security systems, creating significant manual efforts regarding the management of identities and their related physical access. This complication increases because the enforcement of security policies is also manual, making it an inconsistent and error-prone process. Some of the resulting implications include the existence of duplicate identities, unauthorized access to identities, limited or no validation of prerequisites for access provisioning, no audit trail into access assignment, delay in or no removal of physical access for identities terminated in HR and other related challenges.

Quantum Secure is the leading provider of enterprise software to manage and streamline security identities, compliance and events across disparate physical security systems. Our SAFE suite of software enables security practitioners to integrate disparate physical security systems, automate key processes and simplify control of employees, vendors and other third-party identities across a global organization. As a software solution, SAFE works with your existing security infrastructure — with no need to replace your existing hardware. By connecting physical security operations closely to their IT infrastructure, corporations can quickly lower operational costs, improve their compliance standing and lower their overall level of risk.

SARGENT® Profile Series with Aperio™ Wireless Lock Technology

SARGENT® Profile Series locks with Aperio™ wireless technology allow facilities to expand their access control footprint and enhance overall security by protecting medium-security doors. Aperio utilizes local wireless communication between the lock and a communications hub to connect to an online electronic access control system, significantly reducing the cost and inconvenience of traditional access control.

Aperio is a global wireless platform from ASSA ABLOY that allows you to expand your access control footprint — quickly, easily, and affordably — using existing platforms you trust. Available across a range of locking hardware from ASSA ABLOY Group brands, Aperio provides the flexibility to address a variety of applications throughout your facility.

The Profile Series combines integrated access control components with ANSI/BHMA Grade 1 hardware and is available in mortise lock, cylindrical lock and exit device configurations. It supports HID® 125 kHz proximity or 13.56 MHz iCLASS® contactless credentials, with full authentication in all formats. The Aperio-enabled lock requires minimal field configuration and ensures quick, easy wireless deployments. Wireless communication (IEEE 802.15.4) between the lock and Aperio hub uses AES 128 encryption to ensure the highest level of security.

ACCESS CONTROL & DOOR HARDWARE

Corbin Russwin® Access 800® WI1 Intelligent WiFi Access Control

The Access 800 WI1 is ideal for bringing access control to areas of a building that are cost-prohibitive or challenging to wire. It is a complete solution, integrating all components — including ANSI/BHMA Grade 1 Corbin Russwin hardware, card reader and door monitoring — into a single device. The Access 800 WI1's open architecture design simplifies integration with any access control system, and because there are no wires to run, it significantly reduces installation and labor costs.

Using an existing IEEE 802.11 b/g WiFi network and HID® 125 kHz proximity or 13.56 iCLASS® credentials, the Access 800 WI1 offers complete access control features. Capabilities include real-time alarms and local decision-making to ensure operation regardless of network status. It also features advanced data security with standard encryption techniques to ensure the highest level of protection and is available with keypad for two-factor authentication.

The Access 800 WI1 is offered in ANSI/BHMA Grade 1 cylindrical locks, mortise locks and exit devices with a variety of finishes and lever styles — standard, Muséo® and Vineyard™ — for a consistent design aesthetic throughout a facility. It uses standard AA batteries for easy, cost-effective deployment and maintenance.

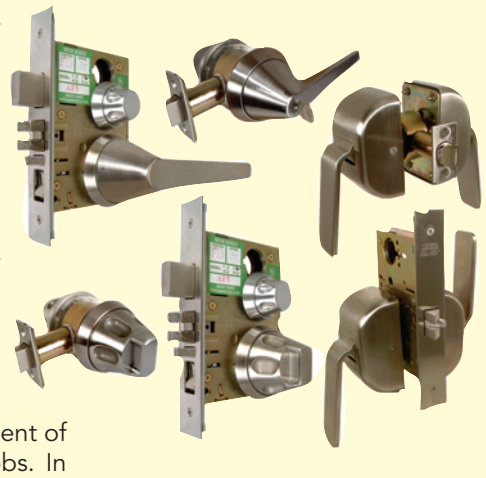
Ligature Resistant Hardware, Hospital Push/Pulls, Mortise/Cylindrical Locksets



Marks USA offers a complete line of Ligature Resistant Hardware, Hospital Push/Pulls, Mortise and Cylindrical locksets. Their Grade 1 Institutional Life Safety locksets are designed to address managed liability, accident prevention, life safety and security in behavioral health care institutions.

The shape and construction of the SS55 and SS19 Series Locksets are designed to restrict the attachment of lines, laces, etc., to doorknobs. In addition, with the knobs recessed into the rosettes, the chance of capturing a line between the knob and rosette is substantially eliminated. The SS55 and SS19 Locksets are currently in use at Coney Island, Bellevue and Jacobi Hospitals in New York, the Denver V.A. Hospital in Colorado and Santa Clara Valley Medical Center in California, to name a few.

Marks USA was established in 1977 as a mortise lock manufacturing company that would meet the needs of an expanding market. Since then, the company has grown and expanded its' product line to include residential, institutional and commercial locksets to meet and exceed the most stringent UL and ANSI specifications.

Maximum Security Multi-Point Lock

The Detex ECL-230X-TDB is a maximum security, multi-point lock so big and strong that it stands up to assault by the bad guys. Its heavy-duty, three-bolt construction takes panic hardware to a whole new level of toughness and eases your back-door security worries. The 230X-TDB is designed with a larger deadbolt that goes deeper into the frame than other locks in the category. Connecting rods are solid steel, rather than the less reliable hollow rod/cable construction. Its low profile meets International Building Code requirement allowing for 4" maximum projection off the face of the door. Life safety and code compliant, the Detex 230X-TDB serves as both panic hardware and a maximum-strength locking device.

Select eInquiry #516

Our bad boy is stronger than these bad boys.

A Detex exclusive, the 230X multi-point locking device raises the bar on back-door security.

When the bad guys try to muscle in, the super-tough 230X keeps them out. Designed with extreme-duty, three-bolt construction, this device is built with a larger side bolt that goes deeper into the frame, plus solid steel connecting rods rather than less-reliable hollow rod/cable construction.

How tough is it? The bottom bolt goes 5/8-inch deep into the floor, preventing peeling up the bottom of the door. The largest side deadbolt in the category resists crowbarring. And at the top corner, the solid steel deadbolt provides needed stability. Testing proves that a 230X secured door withstands 10,000 pounds of pull force.

Life safety and code compliant, the 230X is both panic hardware and a maximum-strength locking device. Ask us how this powerful new hardware can take the hit for your business, or go to detex.com/230X/.

SELECT Hinges™ Geared Continuous Hinges

Do your customers complain about a "problem door?" Chances are, the problem isn't the door. Or even the lock. Fix the real problem — worn out butt and pivot hinges — and deliver total door service with SELECT geared continuous hinges. A SELECT geared continuous hinge surpassed 25,000,000 open/close cycles in laboratory testing — equivalent to 50 years of high-traffic use and 10 times beyond BHMA Grade 1 cycle count. That's why we can offer the industry's only Continuous Warranty™, a warranty that never expires. SELECT hinges eliminate hinge repairs forever and are ideal for high-traffic doors in retail storefronts, schools, convention centers, sports facilities, airports and other public buildings.

Call 800-423-1174 or visit www.select-hinges.com.

Delayed Egress with Latch Retraction

Delayed Egress with Latch Retraction (EExER) is designed for applications where both delayed egress and remote unlocking, remote dogging, access control or an automatic door operator is desired. An optional EX Request to Exit Switch may be added for push pad monitoring or LX Switch for latch bolt monitoring. The 100 dB alarm, will sound when someone attempts to exit but the door will remain locked for 15 seconds, deterring unauthorized exits and providing time to respond to the alarm. Ideal for restricted areas, access controlled doors, and any door requiring authorized entry or exit, while preventing unauthorized entry or exit. Perfect for fire-rated, cross corridor, access controlled, delayed egress doors with automatic operators, all without using magnetic locks or electric strikes.

Mobile Monitoring Application

With its latest OnGuard Mobile Monitoring application, Lenel Systems International Inc. announces support for the Android, Windows 7, iPad, iPhone smartphones and other wireless devices. Previously available only on BlackBerry smartphones, the application meets today's growing business demands for additional choices in mobile equipment for monitoring corporate and government facilities. "When guards and security personnel cannot be present at a central monitoring station, mobile monitoring alerts security to real-time activities throughout the entire location," says Shaun Kelsey, Custom Solutions Manager for Lenel. While patrolling, guards can review and receive alarms, as well as run reports against user transactions logged by the mobile devices. Lenel is a business of UTC Fire & Security, a unit of United Technologies Corp.

Card Personalization Software

HID Global has released its Asure ID Software Development Kit (SDK) that enables more powerful card personalization software for FARGO and other major desktop card ID printers. Asure ID SDK is a set of modules and tools for third-party developers to incorporate the card personalization features into their own credential management systems. The SDK enables developers to streamline the entire card personalization process by fully integrating technology card programming and card design templates into credential management systems, allowing end-users to leverage one software interface to design, encode and print ID cards.

Two-Door PoE Access Starter Kit

Paxton Access has released its Two-Door PoE Access Starter Kit. Designed to provide an initial access control backbone for a site or facility, the kit is a simple way to quote, order and install basic elements of the first two doors of an access control system based on Power over Ethernet technology (PoE). Each kit includes the necessary electronics for two doors, 20 users, software administration and proximity access readers. Simply add the mid-span injector and door locking hardware (available through your distributor) for a simple, cost-effective and complete turnkey security solution. The starter kit includes a five-year warranty and immediate availability from distribution partners.

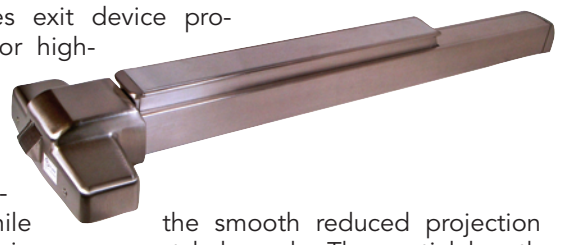
Marks USA M9900 Series Exit Device



Marks USA's M9900 series exit device provides extreme durability for high-impact applications such as schools, universities and other institutional or commercial buildings. The heavy-duty cast chassis provides superior durability, while the smooth reduced projection touchbar assembly minimizes catch hazards. The partial length touchpad permits options such as dogging. A full complement of free wheeling lever trim is available. Marks USA was established in 1977 as a mortise lock manufacturing company that would meet the needs of an expanding market. Since then, the company has grown and expanded its' product line to include residential, institutional and commercial locksets to meet and exceed the most stringent UL and ANSI specifications.

SARGENT® Harmony Series Online Integrated Wiegand Access Control Solution

The SARGENT Harmony Series offers big features in a small, well-styled lock that is in tune with the aesthetic needs of the architect, and provides high security and ease of installation for the facility or security manager. Featuring ANSI/BHMA Grade 1 hardware, the Harmony Series consolidates all standard access control components into the lock. This dramatically reduces installation time and ensures a clean, streamlined appearance, maintaining the architectural integrity around the door. Available in cylindrical lock, mortise lock and exit device configurations, the Harmony Series supports HID® 125 kHz prox or 13.56 MHz iCLASS® credentials and offers full monitoring capabilities and an open architecture platform. Designed to blend into any environment flawlessly, the series is available with SARGENT Studio Collection decorative levers and 13 finishes.

PoE Single-Door Controller

Honeywell's Pro-Watch security management system features a new Power-over-Ethernet (PoE) single-door controller, with which organizations can add one door at a time to an existing Pro-Watch system. The single-door controllers simplify access control system scalability by allowing users to connect up to 16 PoE reader modules, one door at a time. Other Pro-Watch 3.81 software upgrades include: Software-based license keys; inclusion of the S-Net protocol to provide a smooth migration path from legacy Star I controllers to current technology; and virtualization support with VMware and Microsoft Hyper-V, which enables an organization's IT staff to host Pro-Watch as a virtual server.

Enterprise Access Control

C•CURE 9000 Enterprise (version 2.01) from Software House, part of Tyco Security Products, provides a distributed architecture for enterprise scalability ideal for global, multi-location organizations as well as entities with a handful of locally dispersed locations. The software gives central control over the entire system for centralized configuration and monitoring, while each local facility maintains independent control of its individual operation. System administrators at the main facility can configure and monitor all locations from that central site. Each local server may be positioned near its relevant field hardware, which limits traffic to the main server and optimizes performance.

Concealed Electric Strike for Mortise Locksets

The HES 8500 series is the first concealed electric strike solution for mortise locksets. This revolutionary electric strike works with 3/4" mortise locksets in either metal or wood frame installations. Designed for a fast, convenient, and beautiful installation, the 8500 maintains the standard ANSI prep with no cutting into the face of the frame. The HES 8500 is ANSI/BHMA Grade 1, UL 10C 3-hr fire rated, and UL 1034 burglary resistant listed. Optional features include: four faceplate options, three deadlatch platforms, Latchbolt Monitor (LBM), and Latchbolt Strike Monitor (LBSM).

Your problem door isn't a door problem.

Your sticking door probably isn't the door's fault. Butt and pivot hinges wear out quickly on high-traffic entrances. Stress focused on only two or three hinge points eventually deforms the hinges, making your door hard to close and compromising security.

A SELECT geared continuous hinge fixes your "problem door" for good.

A SELECT geared continuous hinge distributes stress along the door length, giving it durability proven by more than 25 million open/close cycles in independent testing. That's why we can offer the industry's only Continuous Warranty™ covering any failure of our aluminum geared continuous hinges — with no expiration date.

Tested to last 50+ years
CONTINUOUS WARRANTY™

Wireless Gate Kit

Ingersoll Rand Security Technologies' Schlage AD-Series GCK400 Wireless Gate Kit leverages existing access control systems to gate entrances while saving thousands of dollars per gate in trenching costs. Because of the expenses in digging trenches and laying cable to their perimeter gates, many companies are not able to use their access cards for parking lots or are forced to use a standalone system at the gates, inhibiting real-time access control throughout the facility and grounds. The kit works in tandem with any access control system to provide up to 4,000 feet of clear line-of-site access control, eliminating the problems and costs of digging trenches to lay cable.

Logic Electronic Cylinder Platform

Medeco Security Locks has introduced M³ Logic, a Logic electronic cylinder platform that enables users to use just one key to control electronic cylinders within the same system as mechanical cylinders. The system allows for uncomplicated, rapid system changes. Features of the electronic cylinder include audit trails, scheduling, and the ability to efficiently add or delete users. The units require no wiring, door or frame modifications, or additional hardware since they are simply cylinder replacements. Ideal for both internal and external installation, the cylinders can be retrofitted into existing hardware in less than five minutes, nearly eliminating installation expense. The compact M³ Logic key is patent-protected against duplication, holds up to 1,000 audit events, features multiple time schedules, and incorporates both visible and audible status feedback. Variations of the M³ Logic platform include Biaxial Logic and Original Logic, which are compatible with older Medeco mechanical technology.

ONVIF PSIA

A member of ONVIF and PSIA, Lenel proudly supports open-architecture design and open standards.

OPEN™
OpenAccess ALLIANCE PROGRAM

More than 100 manufacturers are members of the Lenel OpenAccess Alliance Program (OAAP), and have developed interfaces to Lenel's industry-leading OnGuard security platform. None of our competitors have partner programs of that scale. OAAP keeps your product selection decisions open, allowing you to select hardware and software solutions that best fit your needs.

A lot of suppliers in the security business talk a good game about how their hardware or software is "open" but few can pass the litmus test for being truly open.

Lenel first introduced an open systems architecture to a proprietary security industry in 1995. Since then, Lenel has become the gold standard for leading-edge technology and flexible open systems design.

The world is changing and security needs to evolve. Lenel's non-proprietary, open standard approach provides you with hardware and system independence so you can select the best-fit security solution for your current and future needs.

At Lenel, we provide you with the power of choice.

- ☑ **92 of the Fortune 100 are Lenel customers**
- ☑ **20,000+ installations worldwide**
- ☑ **90+ countries**
- ☑ **100+ OpenAccess Alliance Program partners**

ALARMS, INTRUSION DETECTION & CENTRAL

NAPCO Commerical Addressable Fire or Gemini Combo Burg/Fire Systems

Napco Security Technologies Inc., recently introduced its Napco Commercial Platform™, a full line of Commercial Fire or Combo Intrusion/ Fire Systems configurable for wireless, hardwire, analog, addressable or conventional technology devices.

Meticulously engineered to plain do more, the NAPCO Commercial Platform includes built-in labor savings, incredible power, and feature-rich value that's easy to plan-out and standardize on for 255, 128 or 32 points of commercial wireless, analog addressable and/or 12V conventional installations; and it is fully compliant with the most rigorous industry standards, including UL864 9th Ed., NFPA72, SIA CP01 and more.

Knowing what a real-world installation requires, the system features more value-adds built in, all onboard: 7 Amps of power, 4 NACs (expandable), built-in, dual line DACT and strobe/horn synch module.

More handy features include easiest AHJ calcs: up to 32AH standby separate for burg and fire; and remote/onsite uploadable analog smoke sensitivity reporting. The line includes a full complement of peripherals and wireless, analog, addressable and conventional devices listed for use with it, plus NAC extenders and 24V & 12V Regulated Power Supplies backward compatible for all Gemini Control Panels. Ask for the NAPCO Commercial Platform at your Napco distributor. Free training certification classes and overviews are given both as webinars & in the field and earn security professionals up to 8 ceu credits. Go to napcosecurity.com/training for more details.

Wireless Alarm System

Visonic Ltd.'s PowerMaster-30 wireless alarm system is designed to meet the security needs of large residential premises and mid-size businesses. The system enables security professionals and central stations to provide a wireless alarm system with reliability closer than ever to that of a wired system. The system's PowerG network uses Two-Way Low-Power Frequency Hopping Spread Spectrum (FHSS) technology to ensure that each transmission arrives uninterrupted at its destination. It successfully overcomes intentional and unintentional interferences, jamming and collisions, resulting in increased reliability of the wireless network even in "noisy" environments with dense radio energy.

Microwave-Based Intrusion Detection

Senstar Corp.'s newest generation microwave, µltraWave, is an all-digital volumetric sensor that provides advanced warning to security forces of unwanted intrusions. Key benefits of the sensor include ease of use, powerful networking capabilities and long-term reliability. The unit's sophisticated detection algorithms look for specific responses that discriminate real intrusions from environmental effects. It comes with a Windows-based software configuration tool with intuitive screens. Calibration is streamlined with minimal settings and sensor response data can be viewed and recorded in real-time to evaluate sensor Probability of detection (Pd) and Nuisance Alarm Rates (NAR). Highly stable RF sources allow for 10 operating channels, allowing even the densest concentration of microwaves.

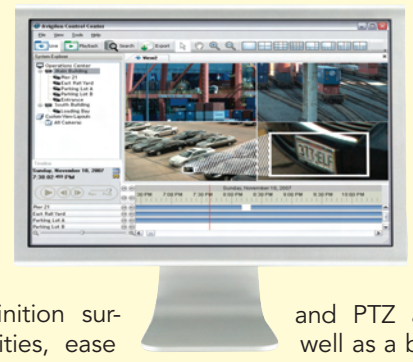
VIDEO SURVEILLANCE

Avigilon Control Center Core

Avigilon is addressing the security needs of small businesses with the newest edition of its Avigilon Control Center Core software. This entry-level version of the already award-winning network video management software delivers advanced high-definition surveillance capabilities, ease of use and superior image quality to small businesses. Many small businesses — such as retailers, convenience stores and small office buildings — face security concerns similar to those of larger companies, but they are constrained by smaller budgets and a lack of dedicated security staff. As a result, small businesses are increasingly looking for affordable, easy-to-use HD surveillance systems. Leveraging Avigilon's High-Definition Stream Management (HDSM) technology to achieve the best possible image quality while using less bandwidth and less powerful workstations for lower costs, Avigilon Control Center Core delivers the following features and benefits:



- A complete system for reviewing live and recorded HD images;
- Accommodates conventional and PTZ analog cameras, as well as a broad range of third-party IP cameras and encoders, enabling a budget-conscious migration to HD;
- Simple and intuitive user interface for full control over surveillance video playback to quickly retrieve evidence; and
- Robust searching enables quick and accurate navigation of large amounts of recorded HD video with camera-specific event logs.

Now, small businesses can customize an effective security solution that works for them.

EtherStretch

EtherStretch can quickly turn any ordinary telecommunications cable (coax or UTP) into a high-speed network communication and PoE path. When operating over coaxial cable (RG59), distances of up to 500 meters (1640 feet) can be achieved. The UTP version uses a four-pair UTP cable to communicate up to 600 meters. The EtherStretch system consists of a transmitter and a receiver set, which requires very little installation time and absolutely no set up or configuration. The transmitter and receiver are transparent to the network and have no IP or MAC addressing. Simply connect your network devices to the network ports of the transmitter and receiver along with existing cabling, and the system begins communicating.

VIDEO SURVEILLANCE

PTZ Camera Line

Bosch Security Systems Inc. has introduced the next generation of its AutoDome Pan-Tilt-Zoom Camera family. The new AutoDome 600 Series analog cameras and the AutoDome 700 Series IP cameras provide end-users with high resolution imaging in a range of scene conditions, including well-lit, harshly lit or low-light environments. The cameras feature 360-degree high-speed continuous rotation and 28x or 36x optical zoom to provide customers with an increased monitoring range. The 600 Series cameras offer built-in motion detection, advanced alarm control and the award-winning AutoTrack II. The 700 Series IP cameras come with embedded Intelligent Video Analysis (IVA) software already enabled. With this feature, the cameras process video signals and automatically alert operators to potential security risks. One AutoDome pan-tilt-zoom camera can analyze up to 10 different scenes for loitering, line crossing and other potential threats– providing customers with reliable detection, tracking, analysis and advanced search capabilities.

All-in-One Server/Storage Appliance

Intransa has introduced its all-in-one platform, the VA1020 Server/Storage Appliance, which leverages the power and cost effectiveness of IT hardware while optimizing for video surveillance, access control and analytic software choices. It is designed for organizations with small- to mid-sized camera installations and for both standalone and multiple site applications. Powered by the latest Intel CPUs, the unit provides the server power to support small- to medium-sized VMS projects. It includes choice of 10 or 20TB of raw video recording capacity with high-performance, high-density SATA-II storage, suitable for the majority of physical security needs.

High Definition Cameras

American Dynamics' new Illustra 600 Series HD IP cameras provide greater flexibility in a high-definition camera. Offering superior resolution and low-light performance to .02 lux and lower, the ONVIF-compliant cameras also excel at challenging camera views with a wide-angle Theia lens, and facial enhancement of bit rate analytics for clear facial images with low bandwidth usage and storage costs. The outdoor mini-dome features a built-in heater ring to prevent condensation and features an IP67 rating for extreme environmental conditions. The cameras include three built-in mounting mechanisms, auto-focus and zoom and a compact form factor reduce the time and cost of installation. Megapixel video is provided using the latest sensors and lenses and integrated H.264 compression.

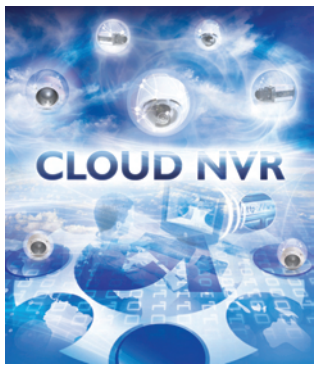
Cloud NVR



DM Network Video has introduced its "Cloud NVR" to provide differentiated IP video benefits to the end-user. The NVR provides a fail-safe, secure IP video camera architecture which is free of a single point of failure. The "Cloud" contains a hardened "Closed IPTV" management layer which protects the IP video system from intrusion, through the implementation of trusted end-points — essential in retail and banking applications or in fact any application where the corporate network is used as part of the security system. This fail-safe architecture is constructed around the CamVu ICR (Integrated Camera Recording) IP cameras which contain recording to both uSD storage and remote HDD storage simultaneously, combined with full enterprise server capability and analytics at the edge.

Network PTZ Dome Camera

Infinova's V1771N-M series 1.3 megapixel Network PTZ dome camera uses 1/3" high performance CCD, with the highest resolution reaching 1280x960. It provides MPEG-4 and M-JPEG dual video compression and triple stream encoding technology, which enables users to select proper code stream according to image quality and bandwidth requirements. With built-in 18X optical zoom and 12X digital zoom lens, it provides Day/Night modes and can work effectively in 24x7 surveillance environments. Powerful network management enables users to monitor the internal temperature, voltage and fan status at any time, which greatly enhances the stability of the dome. The built-in clock module helps to make scheduled settings such as calling presets at regular time and so on. It also features remote upgrade.

EMERGENCY COMMUNICATIONS

Talk-A-Phone's VOIP-500 Series Emergency Phone

Migrating emergency communications equipment to IP could've never been easier. Talk-A-Phone's VOIP–500 Series Emergency Phone can be connected directly into existing routers and LAN infrastructure to work on a standard IP PBX. The unit is a direct physical replacement of a Talk-A-Phone's ETP-400 Series Phone. Many custom faceplate sizes are available, allowing other manufacturer's phones to be easily upgraded to VOIP–500 Series. As an added benefit, VOIP–500 Series Emergency Phones can be paged at high volume with WEBS Contact® mass notification software, allowing emergency personnel to issue targeted alerts to any segment of a facility. The software automatically tests and verifies connectivity of VOIP–500 Series phones and sends email alerts on failure detection. Scan the QR code for more information or visit **www.talkaphone.com**.

Personal Emergency Response System

LifeSentry is the ultimate Personal Emergency Response System. As the world's smallest two-way voice communicator, one can push the button on the pendant from anywhere in and around their home and be talking to a central monitoring station operator in seconds. For years, such systems required one to shout across the house to speak to the central station operator. LifeSentry puts the speakerphone right in the pendant. Up to 600 feet of range. The Emergency Wall Communicator accessory is like PERS on steroids. Simply attach this device to the wall anywhere in your home — and you have full way voice communication to the central station of your choice. The water-proof unit can even be located right in the shower — where most accidents happen.

Detex EasyKit Systems

The Detex EasyKit catalog number specifies everything you need for virtually any application, with one price and no problems. Illustrated here is the AODx10ERx1S-1 Automatically Operated Door EasyKit, which integrates the Advantex latch retraction exit device with Detex's low energy, automatic operator with pre-wired, built-in latch retraction power supply. Also included are two wireless ADA activation buttons, a power transfer, code-compliant signage and an easy-to-follow wiring diagram, helping make installation easy and mistake-free. The Detex AODx10ERx1S-1 was designed by our customers for applications at assisted living homes, airports, healthcare, shopping centers and any application where access control and a low-energy, automatic operator is required. Choose a pre-wired EasyKit System, or work with Detex to create your custom EasyKit.

Enterprise Security Management

OnSSI has added two new features to its Ocularis platform. VideoSynopsis, an optional embedded module, enables fast viewing of hours of video footage within the Ocularis Client view. OpenSight enables users to share information from video surveillance and other security systems outside their own system. The system puts information from large video surveillance and physical security systems at the operator's fingertips with an intuitive interface, touchscreen functionality and map-based navigation. The latest release of Ocularis is offered in four different feature sets, all scalable to virtually any number of cameras at multiple sites. This allows users to meet their specific system needs and requirements while offering alerting and video analysis features that were once limited to enterprise-scale solutions.

RKE Remotes

STRATTEC Security Corp. is adding RKE remotes to its traditional line of automotive lock and key products. The first round of remotes licensed for sale are from General Motors. This initial release has applications for later model GM vehicles from 2007-2012. Currently, eight remotes were released with more on the way. These remotes are factory originals and come in configurations anywhere from 3 to 6 buttons. All current GM part numbers can be found along with the applications at http://aftermarket.strattec.com. Want to be on our e-mail notification for new products? On the left-hand side of the home page, enter your e-mail address under "get e-mail updates" and hit OK. Follow the prompts and provide some basic info. We will let you when more new products become available.

Ford Side Mill Keys

Ford is moving the majority of vehicle platforms to a global key design over the next several years. The first vehicle to feature the side mill key design is the 2011 Fiesta. STRATTEC also has ignition and door repair kits available. The 2012 Focus comes equipped with a side mill 4 button IKT key. The button configuration and functionality are the same as the current IKT keys. The blade is the side mill technology. Look for the introduction of ignition and door repair kits in the near future. The newly designed 2012 Escape will have a side mill 3 button IKT key. Look for this new key from STRATTEC later this year.

VISITOR MANAGEMENT

Quantum Secure Visitor Identity Manager

Managing visitors, contractors and other temporary guests from check-in to the time they leave is critical to the security of your organization. For many organizations, the processes used to manage these visitors is manual in nature, resulting in errors and long visitor wait times — often creating corporate risk from unscrupulous visitors. Unfortunately, present-day solutions which try to address these problems lack the scalability of a global solution and do not possess the flexibility to respond quickly to changes in security policies. Additionally, these applications often exist in silos with limited integration with other security systems, thereby limiting the complete automation of the visitor processes.

SAFE Visitor Identity Manager from Quantum Secure manages all types of physical identities and automates the entire visitor identity management lifecycle. SAFE Visitor Identity Manager is a completely Web-based solution that includes capabilities for visitor pre-registration, registration, security checks and access authorization, check-in/check-out, badge printing and centralized reporting, and audit trail functions.

SAFE Visitor Identity Manager provides one place to manage both central and regional policies for visitors. These policies can be easily defined and subsequently managed using an optional, easy-to-use graphical interface. SAFE also includes embedded workflow capabilities involving approvals for visitors, notifications, delegated administration, escalations and reminders along with a full audit trail.

Driver's License Scanner

EasyLobby has partnered with AssureTec Technologies to offer AssureTec's ID authentication system as part of EasyLobby's suite of visitor solutions, allowing users to scan driver's licenses for authenticity and accurately capture the information and the photo. The AssureTec ID-150 is capable of reading both sides of a driver's license simultaneously and automatically comparing the data on the magnetic strip or 2D barcode on the back of the license and the information on the front. It extracts all available data fields, as well as the photo, and within seconds runs multiple forensic tests specific to that license. All current issue and most previous issue licenses are supported from all U.S. states, Canadian provinces and many licenses from around the world.

Barrier-Free Optical Turnstile

Smarter Security Systems' Mini-Optical optical turnstile is ideal not just for lobby security applications, but also to restrict access through corridors and hallways. The unit is a barrier-free turnstile that restricts access where security staff can respond by alarming unauthorized entry attempts. Microprocessor-based intelligence combines with infrared beams to discriminate between human traffic and inanimate object to minimize false alarms. The pedestals are only 4 inches wide by 8.4 inches long, allowing the units to be placed in hallways to secure passage ahead of sensitive areas such as SCIFs. An available floor protector simplifies hallway installation, and it can be mounted to the walls of a hallway for a more elegant installation. LED indicator lights at the top and bottom of each pedestal clearly communicate the lane status to users and to security staff to assist in detaining intruders.

PoE Fiber Optic Media Converter

ComNet has expanded its Ethernet product line by introducing a 1000FX fiber optic media converter with Power over Ethernet (PoE). The CNGE2M-CPOE provides a PoE function to compatible peripheral devices and supports the latest IEEE 802.3at PoE standard for use for as Power Sourcing Equipment (PSE), supplying up to 25 Watts of power. Designed for use in harsh environments, these products allow 10/100/1000TX Ethernet data to be transmitted optically over either multimode or single mode optical fiber, by application-specific, optional SFP modules. With many end-users' desire to exceed the existing 100 meter transmission distance limitation of CAT-5e cabling, this PoE solution can extend the transmission distance significantly with no loss of bandwidth.
