

Central Station Automation Software

Bold Technologies' Manitou-NEO was designed to meet the changing needs of a central station. A customizable dashboard streamlines central station activity by displaying essential system conditions such as the alarm queue, recent alarm customers, and signal status counts; and the information can be displayed on a large screen in the monitoring center or viewed on a mobile device.

Video Walls

NEC Display Solutions of America and Hiperwall Inc., have partnered to provide large-display video wall solutions for control rooms and

other venues. The combination of NEC's displays – including direct-view LEDs, projection, and single-screen large format and desktop displays – and Hiperwall software enables users to view and organize large amounts of information at a glance.

LCD Video Wall Panels

The FHD553-XU from Christie is a professional-grade LCD panel ideal for video walls. Designed for control rooms and visualization markets, the unit features 3.5mm ultra-narrow bezels to offer an industry-standard video wall solution plus high-resolution image quality, built-in video processing and 24/7 operation, combined with support for Christie's Phoenix EP, a content management system for video walls and distributed displays.

Software Interface for Alarm Monitoring

DICE Corporation's Matrix Monitoring

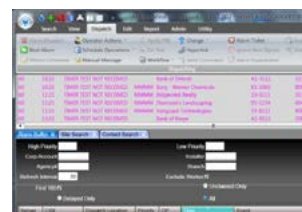

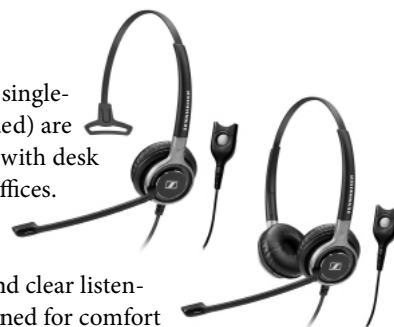

V17 is an easy-to-use interface that displays the important information alarm handlers in a call center need to see on one screen. The software features interactive scripting, which guides operators with step-by-step scripts detailing the information that should be collected during an event. The system can be deployed anywhere with a smart device, tablet, or laptop and browser-based software.

Audio Headsets

Sennheiser's Century SC 630 (single-sided) and SC 660 (double-sided) are wired headsets for all-day use with desk phones in contact centers or offices. They feature voice clarity and an ultra noise-canceling microphone for an accurate and clear listening experience. They are designed for comfort with long-hours use throughout a work day and feature Easy Disconnect plugs – ideal for contact centers where users frequently change shifts or switch between workstations.

Monitoring Center Software

MAStErMind 6.40 monitoring center software from MAS, part of UTC Climate, Controls & Security, is an enterprise-level software application that

provides consolidation and integration capabilities for multiple security-related systems, including intrusion, digital video, fire detection, and access control for security and monitoring personnel. The software includes interfaces and support for common alarm industry receivers and signal format protocols.

Monitoring Station Consoles

Winsted's Spectrum-2 consoles offer flexible equipment mounting options, ergonomic viewing angles and easy expansion for multi-operator control rooms or single-bay workstations. Each rack-mount turret on the console conforms to 19" W EIA standards. Options include: multiple work surfaces; base and turret units; cable routing; Versa-Trak mounting system; adjustable monitor mounts and leg levelers; and more.
