THE SECURITY INDUSTRY'S PRODUCT GUIDE • WINTER 2017

Everbridge Critical Event Management Platform

Enterprise CSOs and COOs understand that their organization is constantly under attack, but they can never predict when or if an attack will deal a business-disrupting blow to their defenses. At the same time, executives never know if or when a physical emergency will put information resources, employees, and other key stakeholders in harm's way. As enterprises face the prospect of dealing with a growing range of threats, they should formalize and consolidate their operational response to a wider variety of threats.

Everbridge enables customers to integrate and consolidate disparate tools to deliver the right information at the right time to the right individuals, so the incident response team can make the best possible decisions to manage a crisis. It is designed to help visualize threats, coordinate the appropriate resources, and manage the crisis management process for any size or type of event.

It enables incident response teams to operate and communicate more effectively to reduce the impact duration of a critical event, limit business disruption, and ultimately protect employee safety and company brand reputation. Having a single tool with a consolidated view and a streamlined interface can reduce errors and potentially save lives. At the same time, being able to audit response rates enables greater fine tuning of the system to improve event handling in the future.

Platinum Tools' EZ-RJ45 Crimp Tool

The new **EXO Crimp Frame**® RJ45 tool from Platinum Tools terminates multiple cable and conductor sizes. The patented EXO Crimp Frame® with EXO-EX Die™ also provides the ability to terminate larger Cat6/6A cables with ezEX-RJ45 connectors. Two interchangeable dies work with genuine **EZ-RJ45**® (Cat5e/6) and **ezEX-RJ45** (Cat6/6A) connectors.

- Single cycle crimp and flush trim
- Reversible Dies for ambidextrous operation
- Connectors lock into tool for correct positioning during crimp
- Improves the trim & crimping of genuine EZ-RJ45® connectors
- Push button storage lock and ergonomic comfort grip handles
- Terminates larger cables and conductors Cat6/6A
- EZ-RJ45 Die for crimping Genuine EZ-RJ45 Connectors
- Wire sequence for T568A/B
- EXO Crimp Frame with EZ-RJ45® Die P/N 100062C (MSRP \$98.00).

Wisenet P Series Multi-Directional Cameras from Hanwha Techwin

Hanwha Techwin's new Wisenet P Series is the next generation of multi-sensor/multi-direction camera technology and is ready for immediate shipment. Available in 8 and 20 megapixel, these cameras offer unmatched performance. They are ideal for applications such as parking lots, shopping mall entrances, lobbies, station concourses and airports.

The Series includes the PNM-9080VQ with four individual 2 megapixel sensors for a total of 8 megapixel resolution capable of 150dB WDR and 60fps (per sensor). The Series also includes the PNM-9081VQ with four individual 5 megapixel sensors that deliver 20 megapixel resolution capable of 120dB WDR and 30 fps (per sensor).

Additional key features of the Wisenet P cameras include:

- Four (4) SD card slots (one per channel)
- PoE+ (8 megapixel) or HPoE (20 megapixel) and 12VDC
- Triple codec H.265/H.264/MJPEG
- Clear images in extreme low light
- Motorized varifocal lens for the widest range available in a multi-sensor camera
- License-free analytics
- Independent configuration for every sensor
- IP66/K10 rated housing

ASSA ABLOY Locking Solutions with Mobile Access® Capability

ASSA ABLOY offers HID Mobile Access® support across a broad range of access control locks from brands Corbin Russwin and SARGENT. This enables the ability to use phones and other mobile devices enabled with Bluetooth® Smart and NFC credentials with the IN120 WiFi lock, Access 700® and Passport 1000 PoE and WiFi locks, and the SE LP10 Integrated Wiegand lock.

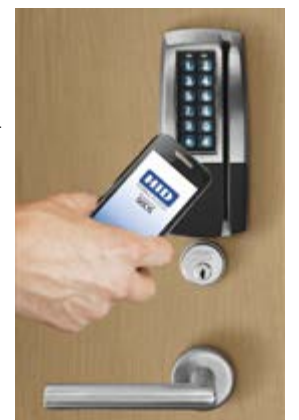

HID Mobile Access® powered by Seos® provides an easy, intuitive solution for issuing, delivering and revoking digital credentials on iOS and Android mobile phones and tablets with Bluetooth® Smart and/or NFC technology. Offering comprehensive security, it protects identity data and keeps over-the-air communications between mobile devices and locks private.

According to Peter Boriskin, Director of Product Management, Electronic Access Control, ASSA ABLOY Americas: "Mobile-enabled locks allow customers to extend the convenience and security of mobile access to a wider variety of applications, while maintaining interoperability with their existing credential base."

Mobile-enabled locks from ASSA ABLOY Group brands are fully compatible with HID Global iCLASS SE® and Seos® cards as well as multiCLASS SE® readers configured for HID Mobile Access®.

Dahua Technology's Proprietary Enhanced Power Over Ethernet (ePoE)

Dahua's proprietary Enhanced Power Over Ethernet (ePoE) technology is designed to combat the limited transmission distances inherent to standard network devices.

The ePoE lineup includes cameras, switches and recorders ideal for applications with long-distance transmission requirements. These network devices allow for data transmission up to 2625ft (800m) without repeaters, providing a lower total cost of ownership to users who require long transmission distances without interruption. Additionally, the new ePoE devices promote seamless analog to IP migration, using coaxial cable to integrate Dahua's ePoE IP cameras with Dahua's Ethernet over Coax (EoC) passive converter for a pure IP solution.

Dahua is first-to-market with this analog-to-IP integrated solution for video surveillance with long-range transmission. Because ePoE has the ability to convert coaxial cabling to a full network solution via Power over Coax (PoC), it eliminates the need for a separate power supply cable when utilizing coaxial infrastructure.

This is a simple and effective solution that delivers seamless plug and play installation, significantly reducing the cost of upgrading from analog to IP. Learn more at the links below.

UNV Super Starlight Dome Camera – Model IPC3232ER3-DUVZ-C

UNV Super Starlight is a mature extreme low light technology which redefines starlight technology with outstanding image at super low illumination. The Super Starlight camera series reaches a new level of image quality and redefines the commonly used starlight technology. It is able to produce crystal clear images at up to 0.0005 lux low illumination, during the night for both static and moving scene. It is incredibly easy to set Starlight mode with only one click. Most importantly, the Super Starlight Bullet has a more affordable price.

UNV 2MP Super Starlight series includes motorized models, the IK10 dome, eye-ball camera and bullet cameras. The motorized lens is unique with 2.7 to 13.5mm focal length, and it is a 5x vari-focal lens. The iris of this lens is constant as F1.2 to ensure the starlight image.

About Uniview: Uniview is the leading supplier of video surveillance products and solutions. With more than 12 years experience in IP video surveillance, Uniview now is the seventh-largest manufacturer worldwide (IHS Markit).

Features of IPC3232ER3-DUVZ-C:

- F1.2 fixed lens, min. illumination 0.0005 lux
- 2MP 5X Motorized
- Focus: 2.7-13.5mm
- 120dB True WDR
- Support Ultra 265 deep compression mode, which can save up to 95% bandwidth and storage space
- IP67, IK10

Request more information: www.SecurityInfoWatch.com/12384992

<http://en.uniview.com>

UNV Ultra 265 KIT

Uniview recently launched the first Ultra 265 Kit in the industry. It combines four IP bullet cameras and one PoE NVR, which has one hard disk, installed into one kit.

Both cameras and NVR have plastic and metal options to choose from. The bullet cameras have many features, including IP67, three streams with full fps, 30 meters smart IR, and 2D/3D DNR. The NVR supports Ultra 265, cloud upgradeability, zero configuration and fan-less design.

UNV Ultra 265 shattered the boundary of how much video can be compressed. It combined H.265 and U-Code encoding technology, helping to reduce up to 95% bandwidth, compared with a common encoding algorithm, without any compromise on the details. Ultra 265 brings users more benefits than ever by saving up to a 95% storage cost.

About Uniview: Uniview is the leading supplier of video surveillance products and solutions. With more than 12 years experience in IP video surveillance, Uniview now is the seventh-largest manufacturer worldwide (IHS Markit).

Features of UNV Ultra 265 KIT:

- IP 67
- 2D/3D DNR
- Smart IR(30m)
- 3 Streams
- Ultra 265
- Fan-less
- 250m PoE
- Cloud upgrade
- Zero configuration

Bosch Video Management System 8.0

The new Video Management System 8.0 (BVMS 8.0) from Bosch offers stitching, GPU (Graphics Processor Unit) decoding and 64-bit function – all of which allows surveillance operators to respond faster to incidents by monitoring a greater number of video cameras concurrently. The BVMS 8.0 offers an additional cost-efficiency, and it supports the latest 'fusion' dual-sensor technology. It runs as a 64-bit application, up from 32-bit in its previous versions. This raises the maximum capacity of a single BVMS from 30 management servers with 100 cameras per server to 50 management servers with 200 cameras per server. The software also enables users to configure Bosch H.265-enabled cameras.

Request more information: www.SecurityInfoWatch.com/12381460

HD Analog Cameras from Vicon

Vicon Industries Inc.'s new line of HD analog cameras deliver 1080p full HD video over conventional coaxial cable. The cameras are as easy to install as traditional analog security cameras. No new cabling is required to upgrade to the HD analog technology. The cameras, available in dome, bullet and box form factors, are appropriate for a wide range of applications and deliver exceptional clarity in all lighting conditions. All cameras feature motion detection, privacy masking, true wide-dynamic-range, backlight compensation and automatic white balance. Bullet and dome models include a 2.8-12 mm varifocal lens.

Request more information: www.SecurityInfoWatch.com/12384201

Compact Four-Channel NVR from IDIS

IDIS has released its latest NVR, the DR-1204P, which supports up to 5MP high definition (HD) recording and one month's footage retention. It utilizes IDIS Intelligent Codec to deliver significant savings on bandwidth and storage (particularly when used with Motion Adaptive Transmission, or MAT, in areas where there is little to no motion or "out of/after hours" periods). It has a compact and sleek design and features super smooth and intuitive monitoring with a range of indoor and outdoor cameras, covering a range of applications. Customers can add more IDIS NVRs and cameras as their business grows, making the solution easily expandable for future surveillance upgrades.

C1M1 Dual-Path Alarm Communicators from ELK Products

ELK Products' C1M1 Communicators significantly reduce transmission time of emergency messages. Dial capture, data bus decoding and cloud servers are not required, eliminating delays in communications. C1M1 provides super-fast, full data reporting to Central Monitoring Stations over IP and cellular pathways and automatically directs transmissions over the best pathway. C1M1 provides remote access with

no port forwarding or extra fees. Installers can remotely program M1 controls over IP or cellular. Consumers can control the M1 remotely via the free ELKLink mobile app and web portal, as well as eKeypad and M1 Touch Pro apps. C1M1 provides email/text notifications for arm, disarm, and alarm events. It also supports ELK's IP based software and interface partners. ELK-C1M14GSM supports GSM networks and ELK-C1M1CDMA supports CDMA networks.

TXF-125E Wireless Quad Photoelectric Beam from Takex

The new TXF-125E battery operated wireless quad photoelectric beam from TAKEX offers a selectable range up to 330 feet.

Fully compatible with virtually any brand of universal wireless transmitter available today, it allows the alarm company to integrate the sensor into older or new wireless security system applications.

The use of 3.6 volt lithium battery design means you can expect many years of sensor operation. The IP65 housing allows for use in wet and dusty environments while protecting the internal components from the elements. A drip-resistant cover and anti-bird spikes help to keep the front cover free of unwanted obstructions.

High visibility colors on both the photo beam transmitter and receiver allow for easy optical alignment due to dual ring optical sight.

The use of the optional ER-02 wireless alignment meter provides the installer with a digital readout of alignment level strength at both the photo beam transmitter and receiver sides simultaneously.

Request more information: www.SecurityInfoWatch.com/12052892

M1 Control Systems from ELK Products

M1 provides the ideal combination of security, energy management, and integrated control solutions. M1 delivers rock solid security and life safety with comprehensive detection and state-of-the-art reporting capabilities. It features a fast microprocessor for enhanced speed, capability and security. Event notifications can be provide via phone call, email, or text message. ELK's Two-Way wireless sensors

feature multi-level security to prevent hacking. Using an integration friendly approach, M1 offers full-featured automation capability to enhance safety, comfort and convenience. M1 provides intelligent control of lights, thermostats, locks, gates, garage doors, water valves and more. Smart features help reduce energy costs without sacrificing comfort. M1 can be remotely controlled from smartphones, tablets, PCs, web browsers and more – with or without monthly fees.

Motion Detection Sensor from Protech

The Pyramid Connect dual technology motion detection sensor from Protech features digital doppler pulsed radar and range cut-off which, when combined with advance target speed analysis and random moving object rejection, further enhances false-alarm-free performance. Other enhancements include alarm centralization technology, allowing it to connect into Protech's Maxibus head-end

(Modbus platform). Stationary movement analysis gives the ability to rule out things like trees which are stationary but have branch movement in the wind. It can be field adjusted to detect only approaching targets, only receding targets or both approaching and receding targets.

Access Control Solutions

Parking Control

For enhanced safety, increased visibility, and reduced costs, DKS's complete line of products to control vehicular traffic includes our latest innovation; the 1601 surface mount Lane Barrier accessory system.

Gate Operators

DKS covers the full range of safe and secure gate operators for single family homes through to multiple large scale maximum security applications.

DKS gate operators, access control and telephone entry systems – offering seamless integration with each other, and providing you with the level of perimeter security and access control that your application demands.

Telephone Entry & Access Control

Connect your controller and devices wirelessly via DKS Cellular for voice and data (programming). Or use DKS internet service. Or DKS can allow you to continue with existing phone lines. Let DKS help you easily setup voice and data (or voice only) connections.

Parking Control Access Control Telephone Entry Gate Operators

DKS Lane Barrier Accessory System

The DKS Lane Barrier Accessory system is an easy add-on to DoorKing's popular 1601 barrier gate operator. The lane barrier is ideal in applications where a higher degree of vehicle traffic control is desired, but without the expense of bollards, wedges or crash beams, making it ideal for apartment communities, gated condominiums, car rental agencies, parking lots and toll booths.

The lane barrier is surface mounted, making installation quick and easy. A simple mechanical linkage to the 1601 barrier operator eliminates the need for separate motors or hydraulic vales and keeps the barrier arm and lane barrier in sync.

The integrated barrier arm and lane barrier are LED lighted for high visibility and operate at a fast 1.5 seconds. The system is available for lane widths of 9, 10, 12 and 14 feet and includes a red / green control signal.

The DKS lane barrier system is a reliable, continuous duty, industrial grade electromechanical parking barrier arm with lane barrier. The DKS lane barrier system is not crash-rated, however, the system enhances theft protection and traffic control by adding a formidable barrier – but without the cost of a full crash-rated system.

Net2 Entry Touch Panel from Paxton Access

2017 marked the fifth anniversary of Paxton's video door entry system, Net2 Entry. To coincide with this milestone, Paxton has released a new video that highlights the evolution of the system over the last five years including the recent introduction of the Net2 Entry Touch panel.

The new touchscreen panel comes with a host of premium features, including a quality 7-inch color touch screen and personalization options, making it suitable for more sites than ever before. Ideal for a range of applications, including commercial buildings, leisure facilities and hotels, the advanced functionality and intuitive operation of Net2 Entry Touch means installers can now offer their customers a premium security option as part of the Net2 Entry range.

The product's stylish design plus excellent build quality has recently been awarded prestigious design awards, 2017 IF DESIGN AWARD in the Building Technology category and the Red Dot: Product Design Award 2017. These global award schemes recognize excellence in design across a variety of product categories. Net2 Entry Touch also won Access Control Product of the Year at the PSI Premier Awards 2017.

You can watch the video here: <http://youtu.be/vhKit0y4qzk> to see how simple and straightforward the plug-and-play solution is to install and use.

For further information about the Net2 Entry Touch panel, please visit the links below.

THEN

NOW

When we come together, great things happen.

HES and Securiton have united as **ASSA ABLOY Electronic Security Hardware**

assaabloyesh.com

ASSA ABLOY Electronic Security Hardware

HES and Securiton have united as ASSA ABLOY Electronic Security Hardware, bringing together the best of both brands: the innovation, strength and service of HES with the durability, quality and no-fault warranty of Securiton.

Founded forty years ago, HES and Securiton established global reputations by developing innovative electric strikes and electromagnetic locks. While all the products you know and love remain available, the product portfolio will expand with increased offerings in cabinet locks, power supplies and low power locking solutions.

HES and Securiton are advancing security, innovation and convenience together as ASSA ABLOY Electronic Security Hardware.

ECL-230X-TDB Multi-Point Lock from Detex

Exclusive to Detex, the ECL-230X-TDB is a heavy-duty, easy to install three-bolt multipoint lock whose construction takes panic hardware to a whole new level of toughness and eases your back-door security worries.

- Larger deadbolt that goes deeper into the frame than other locks in the category
- Connecting rods are solid steel, rather than the less reliable hollow rod/cable construction
- Code Compliant – does not project off the door more than 4" per current Building Code requirements for panic hardware
- Serves as both panic hardware and a maximum-strength locking device
- Photo-luminescent sign available in more than 10 color/language combinations
- 100 decibel alarm
- 3 locking points

Add suffix DX3 (ECL-230X-TDB-DX3) for six locking points for even stronger security. Even if the exterior door hinges are compromised, the DX bolts keep the door locked and secure. These passive deadbolts are easy to install and offer another layer of attack resistance.

How tough is the ECL-230X-TDB? Independent laboratory testing proves a door secured by the ECL-230X-TDB, and when combined with three DX Bolts can withstand 16,000 lbs. of pull force.

For more information on the ECL-230X, visit the links below.

Sustainable Access Control: EcoFlex and EcoPower from ASSA ABLOY

EcoFlex electrified mortise locks, available from ASSA ABLOY Group brands Corbin Russwin and SARGENT, offer a remarkable 96-percent reduction in energy usage compared to standard electrified mortise locks. The lock is ideal for electronic access control applications – whether it is used as a basic electrified lock in conjunction with a wall reader or in an integrated hard-wired lock.

EcoPower, from ASSA ABLOY Group brand Securtron, is a highly efficient power supply designed to work with low-power electrified locks. The small, 4-inch cube access control power supply reduces standby power consumption to only 8.5mW (0.0085W), a 99-percent decrease compared to current linear and switching power supplies.

When used together, the EcoFlex and EcoPower solution is GreenCircle® Certified to reduce power consumption up to 99 percent in both fail-safe and fail-secure applications, from up to 20W to 0.3W. This energy-efficient solution offers a cost-effective alternative to traditional solutions.

Recently recognized with a Top Product of the Year Award from the Environmental Leader Product & Project Awards, the EcoFlex and EcoPower solution showcases ASSA ABLOY's commitment to bringing more sustainable security solutions to the market.

Next Generation IN100 Aperio Wireless Lock from ASSA ABLOY

Available from ASSA ABLOY Group brands Corbin Russwin and SARGENT, the next generation IN100 offers the convenience and flexibility of ASSA ABLOY's Aperio wireless technology with the real-time communication of online access control, enabling remote lock or unlock in less than 10

seconds. Ideal for facilities such as schools or corporate office buildings, the IN100 is designed with ANSI/BHMA Grade 1 hardware and is available in cylindrical lock, mortise lock and exit device configurations. The IN100 uses Aperio wireless technology to allow facilities to leverage existing security infrastructure to easily expand access control coverage more quickly and affordably.

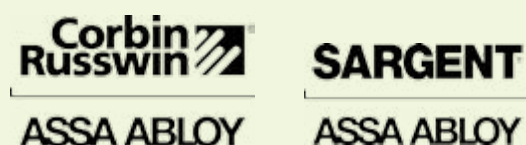

The lock also features HID® multiCLASS SE® technology to provide simultaneous support for multiple credential types and HID Mobile Access® powered by Seos®. A patent-pending credential cache is also available to ensure access when the lock is offline from the electronic access control system.

Designed for easy integration into existing access control systems, the IN100 communicates wirelessly to an Aperio hub, which connects to the access control system using Ethernet, RS-485 or Wiegand wiring.

The IN100 is available with a black or white reader and is offered in a range of finishes and levers. It also suites with the IN Series of access control locks, allowing facilities to have a consistent aesthetic throughout the building regardless of technology.

IN220 Power over Ethernet Locks from ASSA ABLOY

Available from ASSA ABLOY Group brands Corbin Russwin and SARGENT, the IN220 Power-over-Ethernet (PoE) lock combines superior aesthetics with the energy efficiency and streamlined architecture of PoE access control solutions for a cost-effective, sustainable solution that leverages existing network infrastructure for enhanced security and easier installations.

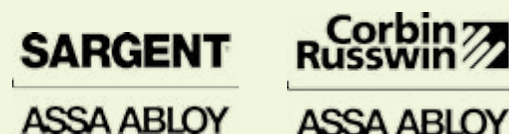

The IN220 uses standard IEEE 802.3af PoE-enabled network infrastructure for both power and data, streamlining the installation process, eliminating proprietary equipment, and enabling real-time communication. The lock also significantly reduces

standby power consumption compared to traditional access control solutions and reduces materials by combining several separate components into a single lock.

Featuring HID® multiCLASS SE® technology, the IN220 supports a wide range of credential types and HID Mobile Access® powered by Seos® for use with mobile devices with Bluetooth® Smart and/or NFC technology. A privacy button enables local lockdown and shelter in place as well as privacy functionality for applications such as restrooms. Built with integrated ANSI/BHMA Grade 1 hardware, all IN220 locks suite with the IN Series of locks and are available in cylindrical lock, mortise lock and exit device configurations as well as a wide range of finishes and decorative levers.

ASSA ABLOY Locking Solutions with Mobile Access® Capability

ASSA ABLOY offers HID Mobile Access® support across a broad range of access control locks from brands Corbin Russwin and SARGENT. This enables the ability to use phones and other mobile devices enabled with Bluetooth® Smart and NFC credentials with the IN120 WiFi lock, Access 700® and Passport 1000 PoE and WiFi locks, and the SE LP10 Integrated Wiegand lock.

HID Mobile Access® powered by Seos® provides an easy, intuitive solution for issuing, delivering and revoking digital credentials on iOS and Android mobile phones and tablets with Bluetooth® Smart and/or NFC technology. Offering comprehensive security, it protects identity data and keeps over-the-air communications between mobile devices and locks private.

According to Peter Boriskin, Director of Product Management, Electronic Access Control, ASSA ABLOY Americas: "Mobile-enabled locks allow customers to extend the convenience and security of mobile access to a wider variety of applications, while maintaining interoperability with their existing credential base."

Mobile-enabled locks from ASSA ABLOY Group brands are fully compatible with HID Global iCLASS SE® and Seos® cards as well as multiCLASS SE® readers configured for HID Mobile Access®.

The global leader in door opening solutions

STid Mobile ID® Mobile Access Control Solution

Use your smartphone as your access control credential!

The secure and instinctive STid Mobile ID® identification solution brings the access badge onto Android™ and iOS® smartphones. It can work alongside, extend or replace traditional RFID access cards.

The virtual credential contributes to the security policy acceptance and adhesion in businesses, industries and governments. STid Mobile ID® is so ergonomic that identification becomes instinctive for users. Imagine opening the door with your smartphone still in the pocket by a simple slide of your hand on the reader!

It is the best and most user-friendly solution to implement access control, even when your mobile phone is in standby mode or during a phone call.

The offline and online architectures enable organizations to remain autonomous and independent with access rights management. The STid Mobile ID® online platform provides remote and dynamic management of your virtual access cards and reader configuration cards. STid is the only manufacturer that gives you the choice between hosting data on STid server, or within your own infrastructure.

Net2 Networked Access Control System from Paxton

Net2 is a user-friendly and flexible networked access control system from Paxton.

The solution is IP-ready, sits directly on a building's network and is managed via a central PC. It allows users to manage security from one central platform making administration straightforward.

Comprised of smart, simple door hardware and advanced, easy to use software; Net2 moves beyond the basics of securing access to doors to provide features like energy saving, system integration, building management and security lockdown.

Key features include:

- Centralized administration and control of sites from 1 to 1,000 doors, and up to 50,000 users;
- Tailor access rights to groups or individuals by creating one-off time periods and temporary access;
- Improved door control with the ability to hold doors open/closed for a specified period;
- Site graphics – upload a graphic of your building to Net2 for an aerial view of access events happening in real time;
- Energy saving triggers and actions – set the system to switch off utilities automatically when the building is empty and save money on energy bills; and
- Compatible with a variety of token technology options – including Paxton, MIFARE® and HID™.

ED4000/ED5000 Series Exit Devices from Corbin Russwin

ED4000/ED5000 Series exit devices from Corbin Russwin have multiple security features ideal for environments that require durable and attractive security solutions that will last the life of a building and provide additional resistance against vandalism and unauthorized entry.

They are independently-verified for cycle and strength testing that exceeds ANSI/BHMA Grade 1 standards for long life and made from 61-percent post-consumer recycled content as per LEED MR credit 4 contributing to your sustainability efforts.

The Motorized Electric Latch Retraction (MELR) option provides remote-controlled latch retraction that delivers quiet, smooth operation for convenient, hassle-free egress. The MELR is easily installed in new applications and available as retrofit assemblies for field updates. It features a maintenance-free design with few moving parts and uses 86 percent less power during retraction than solenoid devices. Plus, MELR is powered by a standard power supply, simplifying installation and increasing system design flexibility.

Yale nexTouch Keypad Access Lock

Meet Yale nexTouch™, the next generation of keypad access control. Featuring an advanced voice-guided system to simplify user programming and maintenance, Yale nexTouch is available with a capacitive touchscreen that is intuitive and easy to use, as well as an ADA-compliant push button keypad option for more tactile environments.

The lock also features privacy mode, which prevents access from the outside when desired. The nexTouch cylindrical lock fits easily into standard door preps for effortless installation.

A truly scalable solution, nexTouch can be used as a stand-alone keypad lock that uses a PIN code to manage access; can be easily upgraded to utilize Data-on-Card technology as part of the Multi-Family Solution with Yale Accentra™ software; or can be upgraded for easy expansion of Zigbee or Z-Wave capable alarm systems in small business environments. Due to its modular design, facilities are able to minimize their investment costs while providing an easy migration path to more connected systems.

This innovative product by Yale offers a variety of benefits for building owners and developers, including reduced maintenance, easy management of access rights, and increased security. The hardware is easy to deploy and provides scalability to adapt to changing requirements.

ASSA ABLOY, the global leader in door opening solutions

CL3100 Series Lock from Corbin Russwin

Corbin Russwin's CL3100 Series is the ideal solution for the toughest environments within education and healthcare facilities. With unique, patented T-Zone lock construction where the lockbody and latch tube interlock in the critical twist area, the CL3100 will last the lifetime of a facility.

Tested to over 15 million cycles and over 3,000 inch lbs. of torque, the vandal resistant lock provides strength and durability that easily exceeds ANSI/BHMA Grade 1 requirements for torque and cycle testing. And, because few components are required when changing the lock function, the design simplifies facility maintenance and lowers the cost of ownership.

Available in 18 functions with 12 hardware finishes including an

anti-microbial coating to supplement cleaning protocols for healthier environments, the CL3100 Series integrates into most existing facility's key systems and retrofits most standard 161 cylindrical lock door preps.

In addition, the CL3100 Series contributes to your sustainability effort with less lock replacements due to its long life and high post-consumer recycled content.

Flexible, strong, and durable – this lock can take whatever you give it.

Alarm Controls AES-300 Electric Strike

Coming soon in 2018, the flexible Alarm Controls AES-300 Electric Strike offers real value and innovation in one compact product.

With 1,000 lbs static strength and 50 ft-lbs of dynamic strength, this small but strong strike body design eliminates the need to cut out the dust box during installation, making retrofitting a breeze.

Each AES-300 complete kit includes the strike body and three faceplates to accommodate cylindrical locksets with up to 5/8" throw.

With up to 1/4" horizontal adjustability, the AES-300 is ideal for cylindrical locksets with up to 5/8" throw in medium duty applications.

And with nearly unlimited customization options, look to the Alarm Controls Custom Solutions team to help build exactly what's needed to satisfy your access control needs. Learn more about this and the full line of Alarm Controls electric strikes and additional products at the links below.

ASSA ABLOY

SARGENT's 11 Line Bored Lock

The Patented 11 Line lock from SARGENT sets a higher standard for Grade 1 bored locks.

Its unique, T-Zone construction provides unequalled strength, durability and security by interlocking the stainless steel lockbody and latch.

Ideal for the most demanding environments within schools, hospitals, and government and military facilities to keep occupants and property safe and secure, the 11 Line has gone through rigorous testing that has been independently verified.

It easily exceeds ANSI/BHMA Grade 1 requirements for torque (2 times the standard) and cycle testing (15 times the standard).

The 11 Line integrates into most existing facility's key systems and retrofits any standard cylindrical lock door prep.

The 11 Line contributes to sustainability efforts with less lock replacements due to the long life and high post-consumer recycled content (68 percent). The design also simplifies facility maintenance and lowers the cost of ownership by utilizing a single lock body for all functions, requiring fewer inventoried parts. Flexible, durable, reliable – this lock can take whatever you give it.

ASSA ABLOY

Sargent 80 Series Exit Device with Lock/Unlock Indicator

Ideal for use in educational facilities, the SARGENT 80 Series rim exit device offers an easy way to lock the outside trim from the inside without opening the door and putting people in harm's way, providing the best combination of durability, simplicity, strength, aesthetics and innovation.

The Lock/Unlock Indicator option (49-) provides a visual means of determining if a door has been secured by the cylinder on the inside of the room. Available

on new or existing devices with a double cylinder function, the visual display eases concerns about knowing if doors are locked because the indicator reminds the occupants.

The indicator is located on the exit device chassis displaying a red icon when the device is locked and a white icon when the device is unsecured.

ML2000 Series Mortise Locksets from Corbin Russwin

The ML2000 Series is an ANSI/BHMA Grade 1 mortise lock designed to withstand the most abusive environments. Available in 51 mechanical and electrified functions – including vandal resistant and behavioral health options – the ML2000 Series is constructed of heavy-gauge steel with unique, patented features and an optimized torsion spring design that has fewer moving parts to give the lock an extremely smooth and consistent operation. All this adds to its versatility and reliability to complement any application.

Designed to meet the rigors of high-traffic commercial, institutional, industrial and government applications, the lockbody is constructed of heavy-gauge steel, our patented Quick Reversible latchbolt, and a 1-inch stainless steel deadbolt. It has been tested to easily surpass all BHMA standards, providing all the strength and security required in a Grade 1 mortise lock.

Furthermore, a wide variety of trim designs and functions and a 10-year warranty lend to the ML2000's versatility and reliability. Utilizing the proven ML2000 Series mortise lockset, you can also combine simplicity with access control and use the electrically controlled mortise lock. The ML2000 Series provides self-contained, integral continuous-duty, solenoid-operated remote locking and unlocking.

The ML2000 Series is the ideal choice for use in offices, schools, hospitals, hotels and other high-use applications.

Adams Rite EX Series Exit Devices

The newly designed EX Series Exit Devices by Adams Rite is complete with four models offering customers sleek, flexible, installation-friendly solutions.

The new EX Series includes the **EX88 Interlocking Rim Exit Device**, with a robust and unique bolt design that interlocks the door to frame for enhanced strength and durability; the **EX89 Pullman Rim Exit Device** which is compatible with the Adams Rite preload capable 74R1 Electric Strike; the **EX76 CVR Exit Device** with concealed adjustable rods and latching assemblies designed for easy installation; and the **EX80 Dummy Push Bar**, whose flexible design comes standard with two monitoring switches and is field selectable for active or inactive configuration.

The EX Series features modern, contoured design with matching metal end caps and no visible hardware from the back once installed. Complimentary trim is available to create a beautiful finish.

Unique features, including impact bumpers, return control and vertical guides provide smoother operation and sound dampening for a superior user experience. The adjustable mounting foot and mounting plate as well as provided adhesive templates assist with device mounting and reduce installation time.

The EX Series is suitable for high, mid and low traffic openings in aluminum, hollow metal and wood applications.

SELECT Geared Continuous Hinge

Do your customers complain about a "problem door?" Chances are, the problem isn't the door, or even the lock. Fix the real problem – worn butt and pivot hinges – and deliver total door service with SELECT geared continuous hinges. A SELECT geared continuous hinge surpassed 25,000,000 open/close cycles in laboratory testing – equivalent to 60 years of high-traffic use and 10 times beyond BHMA Grade 1 cycle count. That's why we can offer the industry's only Continuous Warranty™, a warranty that never expires. SELECT hinges eliminate hinge repairs forever and are ideal for high-traffic doors in retail storefronts, schools, convention centers, sports facilities, airports and other public buildings. Call 800-423-1174 or visit the links below.

ASSA ABLOY IN120 WiFi Locks

The IN120 WiFi lock, available from ASSA ABLOY Group brands Corbin Russwin and SARGENT, offers the ease and flexibility of WiFi in a streamlined design. By enabling more cost-effective installations, the IN120 allows facilities to expand access control coverage to more doors. Ideal for use in hard-to-wire locations,

it uses standard IEEE 802.11b/g/n Wi-Fi connectivity to connect to the access control system, significantly reducing installation costs and eliminating the need for proprietary equipment. The IN120 utilizes HID® multiCLASS SE® technology to support a wide range of credential types and HID Mobile Access® powered by Seos®. Featuring integrated ANSI/BHMA Grade 1 hardware, the IN120 is available in cylindrical and mortise lock configurations, with black or white reader and a broad range of finishes and levers.

BEST Keystone Web: Digital Key Management Program

Keystone Web is the upgraded digital security program for BEST customers with facilities containing more than 100 openings.

Designed to simplify and coordinate storage of an organization's keys, keyholders and door and building access information, Keystone Web allows for easy management of multiple keys, doors and users from a single intuitive user interface.

Today's digital era demands a streamlined and simple way to track keys, assign access levels and document keyholder and door information while identifying phantom keys and creating or updating coremarks and keymarks.

Despite today's modernized schools, workplaces and government facilities, most still lack a primary digital control center for key management operations. With lost keys still accountable for many issues regarding safety of employees and security breaches, Keystone Web gives users the ability to store a comprehensive record of all doors, including numbers, buildings, door types and component history associated with each key. This provides security managers with the ability to limit security threats quickly and efficiently, identify areas affected by a lost key and implement necessary measures to protect the facility from unauthorized access.

BEST's innovative Keystone Web is designed to provide greater flexibility allowing the program to be accessed from anywhere the user is connected to the network.

Trine's 4850ITL Electric Strike Installation Tool

Trine Access Technology has developed the ultimate tool for installing electric strikes used with rim panic devices.

As with all Axion strikes from Trine, this tool was designed to install the entire 4800 series line of strikes quickly and accurately the first time, making the best installation available today.

The 4850ITL is not just a template, it is made from actual production parts giving the installer the ability to adjust for common door issues such as sagging and misalignment. By placing the ITL on the frame, it allows the installer to "feel" the strike working with the door and panic device allowing for fine adjustments before holes are drilled.

The flexibility and therefore accuracy of the 4850-ITL is derived from our patent pending magnetic holding system built into the body of the tool.

Combine this with a custom center punch that is included with every 4850-ITL used to make perfectly centered marks on the frame, this tool is a must for every installer of electric strikes.

See the video by searching "4850ITL" on Youtube!

22-in-1 Security Screwdriver Kit from Platinum Tools

The perfect set for security installers – reach into those deep crevices with ease and never be without the right screwdriver. It features a non-slip, comfort grip handle with a high impact plastic core and 11 double sided security shaft style bits.

The shaft style enables access into recessed screws up to five inches deep. The bit load includes multiple sizes of security Torx® hex and Robertson along with spanners and tri-wings so the list of applications is endless.

This kit can be used on standard hex and torx screws and includes a slotted and Phillips head bit for traditional screwdriver applications. Product number 19015.

For pricing, information and complete product line, call (800) 749-5783, email info@platinumtools.com or visit the links below. *We Make Connections EZ!*

ANSI-ITL for the Best and Easiest Installation of Trine Electric Strikes

Trine's ANSI-ITL is the best way to install both 4-7/8" and 2-3/4" Trine Electric Strikes. Lean and efficient - it utilizes only 2 pieces each (screwed together) for the 4-7/8" and 2-3/4" cutouts which means less lost parts. The Installation tool can be used with the 4100, 4100DBDL, 4200, EN400, EN435, EN430 electric strikes as well as 478, 478X, 234, and 234X installations on the 3000 series.

Adjustments on the installation tool allow for installation even on the lower cutout of the Schlage L series – for use with the 4100 and 4100 DBDL. Additionally the tool includes a scribe pen for accurately marking the cut-out lines on the frame. Two mounting screws for the tool is also included.

Please note the ANSI-ITL replaces the older 478-ANSI-ITL model number. The ANSI-ITL is fast, easy, and accurate.

Ask your distributor how you can get yours today.

Z-Wave Network Diagnostic Tool from Z-Wave Products

Z-Wave Products has release a troubleshooting tool for Z-Wave networks. The Z-Wave Toolbox allows Z-Wave network installers to quickly and easily troubleshoot common issues such as interference, range issues, weak links, and connected-device placement. It also allows stress testing of Z-Wave networks – both residential and commercial – and produces easy-to-decipher, colored Network Health Symbols (NHS) that indicate current performance. A flexible and inexpensive web-based device, the self-contained toolbox will work with any operating system in addition to smartphones and tablets. It contains three major applications: Network Health Tester, Z-Wave Packet Analyzer and Spectrum Analyzer.

Altronix NetWaySP8WPX Hardened PoE Switch

Altronix's NetWaySP8WPX Hardened PoE Switch with Dual SFP (Fiber) Ports is the latest addition to the company's recently introduced NetWay Spectrum Series.

Designed for long-distance applications, the NetWaySP8WPX is a highly cost-effective all-in-one solution that includes an 8-Port hardened PoE switch, 115W power supply/charger with an enclosure that accommodates batteries.

The unit features 2-SFP ports allowing you to connect multiple units and create a fiber ring. Each port is rated at 30W (PoE/PoE+), 2-ports are configurable for 60W (Hi-PoE) and embedded LINQ™ Network Communications Technology provides remote diagnostic monitoring, control and reporting. Proudly Made in the U.S.A. and backed by a lifetime warranty.

ELK-965 Low Battery Cutoff and Master Power Switch

An extended power outage can wreak havoc on an alarm system. As backup battery voltage drops, the alarm system may begin to operate erratically and a deep discharge can damage the backup battery. Eliminate these issues with the ELK-965 Low Battery Cutoff and Master Power Switch. This compact, easy to install device works with any 12 volt control panel or power supply. The ELK-965 automatically cuts off when battery voltage drops below 10 VDC to prevent a "run-away" system and battery deep discharge. Installers will also value the manual AC and battery on/off switch for simplifying system service and eliminating emergency service calls. The ELK-965 is backed by ELK's hassle-free LIFETIME warranty. Also available in a money saving 20 pack, the ELK-965B20. www.elkproducts.com

ELK Auto-Resetting AC Transformers

For more than 17 years, professionals have trusted ELK's AC transformers for reliable performance. Auto-resetting PTC overload protection prevents transformers from being blown by a short or overloaded circuit, saving installers time and the cost of a new transformer. Simply remove the short/overload to re-start. Built-in wire strain relief prevents intruders from pulling wires loose from the transformer terminals. A green LED indicator provides visual confirmation of power output. An electrical outlet mounting tab allows the transformer to be securely attached to the outlet. ELK transformers also feature a grounding prong and terminal. ELK's AC transformers are UL listed, RoHS compliant and have a hassle-free LIFETIME warranty. ELK-TRG1640 is rated at 16.5VAC, 45VA, while ELK-TRG2440 is rated at 24VAC, 40VA. www.elkproducts.com

Viking Electronics' K-1775-IP VoIP Entry Phone System

The vandal resistant K-1775-IP from Viking Electronics is an all-in-one VoIP entry phone system that combines a phone, relays, dialer, keyless entry, proximity reader and camera into one unit – making it easy to install, program and operate. The compact unit can dial up to 250 pre-programmed speed dial numbers or extensions – cell phones, receptionist desks, call groups, etc. The built-in proximity card reader is able to store up to 1,000 card numbers and internal memory can store 1,000 codes for keyless entry. Each card number and keyless entry code can be limited to work certain hours of the day and/or days of the week.

TANE ALARM PRODUCTS

Water Resistant Commercial Alarm Contacts

Tane Alarm Products (New Hyde Park, NY) has added four Water Resistant alarm contacts to its current line of commercial alarm contacts in track mount, overhead and surface mount styles. All feature very wide gaps and three of the four additionally offer armored cases and cables.

These new contacts are suitable for non-submerged installations in locations exposed to the weather, such as warehouse doors, boatsheds, swimming pool gates, job site tool boxes, storage containers, marine facilities and remote field production installations.

For pricing and ordering call 800-852-5050, fax 516-326-9125 or visit WWW.TANEALARM.COM

Everbridge Critical Event Management Platform

Enterprise CSOs and COOs understand that their organization is constantly under attack, but they can never predict when or if an attack will deal a business-disrupting blow to their defenses. At the same time, executives never know if or when a physical emergency will put information resources, employees, and other key stakeholders in harm's way. As enterprises face the prospect of dealing with a growing range of threats, they should formalize and consolidate their operational response to a wider variety of threats.

Everbridge enables customers to integrate and consolidate disparate tools to deliver the right information at the right time to the right individuals, so the incident response team can make the best possible decisions to manage a crisis. It is designed to help visualize threats, coordinate the appropriate resources, and manage the crisis management process for any size or type of event.

It enables incident response teams to operate and communicate more effectively to reduce the impact duration of a critical event, limit business disruption, and ultimately protect employee safety and company brand reputation. Having a single tool with a consolidated view and a streamlined interface can reduce errors and potentially save lives. At the same time, being able to audit response rates enables greater fine tuning of the system to improve event handling in the future.

exacqVision High-Capacity Video Servers

Johnson Controls' exacqVision Network Video Recorders, including the Z-Series, A-Series and M-Series, are now being built with high-capacity hard drives. The exacqVision S-Series server, which archives video, was also upgraded, allowing systems to store

or archive more video. The new exacqVision servers – including the A, M, S and Z Series – offer diverse storage options including RAID models that offer up to 216TB of available storage space. Thanks to this enhancement, system administrators can more effectively manage large amounts of video data and store that data for longer periods of time.

KNOW WHAT COMES AFTER GOOD AND BETTER?

BEST. As in BEST made the first small-format interchangeable core in 1921, setting the industry standard. As in BEST continues to deliver durability and performance that's far beyond good or better. It's BEST.

Quantum's StorNext 6 File System

Quantum Corp.'s StorNext 6 file system adds new advanced data management features to the tiered storage solutions portfolio, which includes flash, disk, tape and public and private cloud storage offerings. It addresses the needs of enterprises grappling with using their existing NAS solutions to store large, rapidly growing data sets and drive business value from that data. StorNext 6 not only overcomes these limitations but also provides more efficient and cost-effective ways to share and access files across geographically distributed teams, to manage and protect archived data, and to audit changes to data throughout its lifecycle.
