Wisenet PNM-9000VQ Multi-Direction Camera from Hanwha Techwin America

The Wisenet PNM-9000VQ (4-head) from Hanwha Techwin America combines powerful performance at an affordable price. For maximum adaptability, configurable fixed-focus lens/CMOS sensor modules are available in multiple fields of view which can be easily installed onsite.

With high frame-rates (60fps for 2MP, 30fps for 5MP), true WDR (Wide Dynamic Range) and a powerful suite of analytics built in, the camera brings a new level of quality and value to the multi-directional camera market. Utilizing a single IP address over one cat5 cable requires only one VMS license – further reducing the cost to install, service and support.

A perfect solution for hospitals, schools and retail, the PNM-9000VQ allows for individual on-screen displays and a full suite of video analytics including loitering, directional detection, fog detection, tampering, motion detection, and objects entering or exiting an area. Hallway view aspect ratios are also supported for monitoring of vertical-shaped areas.

ASSA ABLOY Locking Solutions with Mobile Access® Capability

ASSA ABLOY offers HID Mobile Access® support across a broad range of access control locks from brands Corbin Russwin and SARGENT. This enables the ability to use phones and other mobile devices enabled with Bluetooth® Smart and NFC credentials with the IN120 WiFi lock, Access 700® and Passport 1000 PoE and WiFi locks, and the SE LP10 Integrated Wiegand lock.

HID Mobile Access® powered by Seos® provides an easy, intuitive solution for issuing, delivering and revoking digital credentials on iOS and Android mobile phones and tablets with Bluetooth® Smart and/or NFC technology. Offering comprehensive security, it protects identity data and keeps over-the-air communications between mobile devices and locks private.

According to Peter Boriskin, Director of Product Management, Electronic Access Control, ASSA ABLOY Americas: "Mobile-enabled locks allow customers to extend the convenience and security of mobile access to a wider variety of applications, while maintaining interoperability with their existing credential base."

Mobile-enabled locks from ASSA ABLOY Group brands are fully compatible with HID Global iCLASS SE® and Seos® cards as well as multiCLASS SE® readers configured for HID Mobile Access®.

Altronix Expands Trove Access and Power Integration Series

The new **Trove1M1WP outdoor enclosure** with backplane allows for easy integration with Altronix power and Mercury/Lenel access controllers. The durable enclosure with stainless steel continuous hinge and lockable latches is NEMA 4/4X IP66-Rated for use in harsh outdoor environments. It accommodates up to two 12VDC/7AH batteries for back-up operation, and can be pole mounted using the optional PMK2 Pole Mount Kit.

The new **Trove Rackmount Series** provides integrators with the versatility to incorporate power in the same rack mount unit with the access controllers, or consolidate power for their system in a single enclosure, saving valuable rack space. The solution accommodates a host of access controllers including Mercury/Lenel, HID/VertX, Software House and more. Additionally, an Altronix-only backplane allows for the versatility to design a custom rack mount access control power supply. All rack-mount units include a tamper switch, cam lock and Z bracket for ease of installation and wiring.

These additions simplify board layout and wire management, while reducing installation time and labor costs. It is an ideal solution for vehicle/pedestrian gate access control.

Altronix also offers a free Trove System Design Tool (https://www.altronix.com/system_design_tools/trove) to further simplify product selection and design.

Everbridge Critical Event Management Platform

Enterprise CSOs and COOs understand that their organization is constantly under attack, but they can never predict when or if an attack will deal a business-disrupting blow to their defenses. At the same time, executives never know if or when a physical emergency will put information resources, employees, and other key stakeholders in harm's way. As enterprises face the prospect of dealing with a growing range of threats, they should formalize and consolidate their operational response to a wider variety of threats.

Everbridge enables customers to integrate and consolidate disparate tools to deliver the right information at the right time to the right individuals, so the incident response team can make the best possible decisions to manage a crisis. It is designed to help visualize threats, coordinate the appropriate resources, and manage the crisis management process for any size or type of event.

It enables incident response teams to operate and communicate more effectively to reduce the impact duration of a critical event, limit business disruption, and ultimately protect employee safety and company brand reputation. Having a single tool with a consolidated view and a streamlined interface can reduce errors and potentially save lives. At the same time, being able to audit response rates enables greater fine tuning of the system to improve event handling in the future.

You'll Build a **Total Solution** with DKS

Whether your location is urban or remote, residential or commercial, maximum security or public access, DKS delivers a complete, full range of safe and secure Access Control, Telephone Entry, Gate Operator, and Traffic Control products to suit your needs.

Even better, DKS engineers each product line for seamless integration, providing you with the level of perimeter security, access control, and flexibility your property demands.

Traffic Control

Continually re-engineered for improved safety, durabilty, and functionality, the next evolution of the 1601 comes in a fully sealed box for a sleeker look and improved weather resistance. When paired with the 1620 Barrier System, breaches can be a thing of the past.

Maximum Security

Slide Gate Operators for where it really counts; DKS Heavy Duty Gate Operators can move the heaviest gates at top speeds, delivering the tightest level of protection for the most secure locations.

Telephone Entry

With daily use by millions of customers, DKS is constantly upgrading the line of residential and commercial Telephone Entry Systems. This year delivered an updated 1837, with built-in card readers, roomier interior for all the accessories, and one box that fits all mounting options.

Gate Operators

Built to stand tough at the entrance of any home or business, DKS Gate Operators withstand thousands of cycles 24/7. From the smallest homes to the biggest gates, DKS offers Swing and Slide Operators that run on AC, DC, or solar, keeping everyone up and running.

Access Control

Sometimes simplicity is best, and Access Control has never been more streamlined. With the DKS Virtual Card app your mobile device can be used as a secure Access Card for DKS Card Readers.

DynaLock Series 3101C-G2 Delayed Egress Lock

The redesigned, second-generation DynaLock Series 3101C-G2 Delayed Egress Lock incorporates a new, enlarged LED lock status indicator arrangement.

Rather than a single, T-1 ¾ bi-color LED mounted to the stamped aluminum housing cover of the original 3101C, the 3101-G2 utilizes a hi-brightness SMT LED status indicator array, which projects through a wide translucent lens in the face of a new injection-molded polymer housing cover.

This new flame-proof polymer cover comes in a standard matte black finish identical to our armature housing and features a recessed US28 satin aluminum finish faceplate. This faceplate may also be finished to match any of our optional special architectural finishes when a lock is ordered as such.

The 3101C-G2 also adds an optional new, redundant delay egress alarm relay output (AAO – Auxiliary Alarm Output Option). It provides an isolated set of SPDT, Form C output contacts, which duplicate the function of the standard Delay Egress Monitor output. All other mechanical, electronic and templating attributes remain unchanged from the original 3101C. Models configured for single and double out-swinging, double egress and single in-swinging doors are offered and backed by our DynaLife® *PLUS* lifetime warranty.

DynaLock™ For Life®

Versatile Solutions for Narrow Stile Aluminum Openings from Adams Rite

Adams Rite offers practical and quality solutions for retrofitting and upgrading aluminum and glass storefronts from mechanical to electrified openings, adding access control to improve safety and security.

Adams Rite has recently launched a variety of new and innovative electrified access control products for aluminum and glass doors including:

EX Series Exit Devices including: The **EX88 Interlocking Rim Exit Device**, with a robust and unique bolt design that interlocks the door to frame for enhanced strength and durability; the **EX89 Pullman Rim Exit Device**, which is compatible with Adams Rite preload capable 74R1 Electric Strike; the **EX76 CVR Exit Device** with concealed adjustable rods and latching assemblies designed for easy installation; and the **EX80 Dummy Push Bar**, whose flexible design comes standard with two monitoring switches and is field selectable for active or inactive configuration. **The 7800 Electric Strike** is designed to work exclusively with the Adams Rite Starwheel and Interlocking Rim Exit Devices, including the 8800 & 8700 Series Rim Exit Devices and EX88 Interlocking Rim Exit Device.

With new products that perform beyond expectations and feature flexible, robust, easy to install designs, it is clear that Adams Rite is still a pioneering voice in the industry.

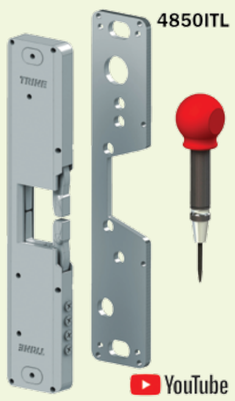
Trine's 4850ITL Electric Strike Installation Tool



Trine Access Technology has developed the ultimate tool for installing electric strikes used with rim panic devices.

As with all Axion strikes from Trine, this tool was designed to install the entire 4800 series line of strikes quickly and accurately the first time, making the best installation available today.

The 4850ITL is not just a template, it is made from actual production parts giving the installer the ability to adjust for common door issues such as sagging and misalignment. By placing the ITL on the frame, it allows the installer to "feel" the strike working with the door and panic device allowing for fine adjustments before holes are drilled.

The flexibility and therefore accuracy of the 4850-ITL is derived from our patent pending magnetic holding system built into the body of the tool.

Combine this with a custom center punch that is included with every 4850-ITL used to make perfectly centered marks on the frame, this tool is a must for every installer of electric strikes.

See the video by searching "4850ITL" on Youtube!

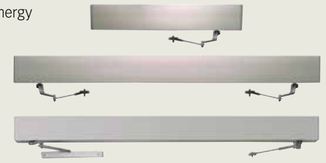
TRINE ACCESS TECHNOLOGY

Detex AO19 Series of Low Energy Automatic Operators



The Detex AO19 Series of Low Energy Automatic Operators are economical, easy to install, heavy-duty products for high use and high abuse applications.

They meet requirements for ANSI/BHMA A156.9 (American National Standard for Power Assist and Low Energy Power Operated Doors) and provide standard features that meet the requirements of the American Disabilities Act.

Operators are available for three different door applications: Single Doors (AO19-1); Double Doors (AO19-2); and Double Egress Doors (AO19-3).

The reliable AO19 offers all the features you expect in an automatic door operator at no extra cost. All operators feature Power Close, adjustable Delayed Activation for sequenced vestibule doors, Reverse On Obstruction, adjustable Closing Speed, Push & Go, 3-way On/Off/Hold switch for ease of service and setup, and Electric Lock Relay including 300ma AC/DC.

The AO19 can be integrated into any existing system, including access control, fire, request to exit, computer signal devices and delayed egress.

Detex is also proud to offer the AO19 in an EasyKit. The Automatically Operated Doors (AOD) EasyKit provides a system that includes the Advantex Latch Retraction exit device and the AO19 Low Energy Automatic Operator with a built-in power supply. The Automatic Operator is pre-wired with the latch retraction power supply, making installation fast and easy. All hardware items, plus riser and wiring diagrams, are provided with one easy-to-order, easy-to-specify part number.

DoorKing 1830 Series Telephone Entry Systems

DoorKing, an industry leader in access control and vehicular gate operating systems, is introducing a new housing for its popular 1830 Series of Telephone Entry Systems. The new housing style simplifies installation and allows installers to meet any installation requirement: wall mount, flush mount or post mount.

The new housing offers a streamlined look, has enhanced locking and weather sealing, and provides easy internal installation of optional components such as a card reader, LCD heater and TCP/IP adapters.

The 1830 Series Telephone Entry Systems provide control of up to three doors or gates and can be expanded to control up to 48 doors or gates.

Connection to the system can be by cellular, internet or by a plain old telephone service (POTS) line – but we do not recommend POTS line connections because of phone line maintenance and modem issues.

The new housing was designed for mounting directly to a wall or gooseneck post. An optional protective hood can easily be added for additional protection against sunlight and vandalism. If flush mount is desired, adding the flush mount kit is all that is needed.

CL3100 Series Lock from Corbin Russwin

Corbin Russwin's CL3100 Series is the ideal solution for the toughest environments within education and healthcare facilities. With unique, patented T-Zone lock construction where the lockbody and latch tube interlock in the critical twist area, the CL3100 will last the lifetime of a facility.

Tested to over 15 million cycles and over 3,000 inch lbs. of torque, the vandal resistant lock provides strength and durability that easily exceeds ANSI/BHMA Grade 1 requirements for torque and cycle testing. And, because few components are required when changing the lock function, the design simplifies facility maintenance and lowers the cost of ownership.

Available in 18 functions with 12 hardware finishes including an anti-microbial coating to supplement cleaning protocols for healthier environments, the CL3100 Series integrates into most existing facility's key systems and retrofits most standard 161 cylindrical lock door preps.

In addition, the CL3100 Series contributes to your sustainability effort with less lock replacements due to its long life and high post-consumer recycled content. Flexible, strong, and durable – this lock can take whatever you give it.

Request more information:

SARGENT's 11 Line Bored Lock

The Patented 11 Line lock from SARGENT sets a higher standard for Grade 1 bored locks.

Its unique, T-Zone construction provides unequalled strength, durability and security by interlocking the stainless steel lockbody and latch.

Ideal for the most demanding environments within schools, hospitals, and government and military facilities to keep occupants and property safe and secure, the 11 Line has gone through rigorous testing that has been independently verified.

It easily exceeds ANSI/BHMA Grade 1 requirements for torque (2 times the standard) and cycle testing (15 times the standard).

The 11 Line integrates into most existing facility's key systems and retrofits any standard cylindrical lock door prep.

The 11 Line contributes to sustainability efforts with less lock replacements due to the long life and high post-consumer recycled content (68 percent). The design also simplifies facility maintenance and lowers the cost of ownership by utilizing a single lock body for all functions, requiring fewer inventoried parts. Flexible, durable, reliable – this lock can take whatever you give it.

SPECTRE Vehicle Identification System from STid

STid introduces SPECTRE, the first of a new generation of long-range ultra-high-frequency (UHF) readers enabling fast vehicle identification at the gate with the highest security levels.

The most important reasons to embrace Automatic Vehicle Identification (AVI) solutions are the convenience, traffic fluidity and the security they bring. Vehicle access control based on traditional proximity, remote control or barcode often results in people leaning uncomfortably out of their windows towards the reader to show their access credentials.

Combining high security levels based on the latest industry standards and modularity making it adaptable to any field scenario, SPECTRE is the solution for all AVI applications. Based on EPC1 Gen 2 standard and UHF passive technologies, SPECTRE rewrites traditional security rules, making them more instinctive. The long-range reader offers reading distances up to 43ft / 13m with reliability for smooth vehicle access. Its outstanding performance makes SPECTRE the fastest reader on the AVI market.

Fully scalable and modular, SPECTRE enables users to cover security issues and configurations, even in highly challenging environments. The reader is built to manage up to four driveways handling access of a mixed fleet of vehicles (light, heavy and motorcycles), identification on wide lanes, or even distinct access control for four vehicle lanes.

Sustainable Access Control: EcoFlex and EcoPower from ASSA ABLOY

EcoFlex electrified mortise locks, available from ASSA ABLOY Group brands Corbin Russwin and SARGENT, offer a remarkable 96-percent reduction in energy usage compared to standard electrified mortise locks. The lock is ideal for electronic access control applications – whether it is used as a basic electrified lock in conjunction with a wall reader or in an integrated hard-wired lock.

EcoPower, from ASSA ABLOY Group brand Securitron, is a highly efficient power supply designed to work with low-power electrified locks. The small, 4-inch cube access control power supply reduces standby power consumption to only 8.5mW (0.0085W), a 99-percent decrease compared to current linear and switching power supplies.

When used together, the EcoFlex and EcoPower solution is GreenCircle® Certified to reduce power consumption up to 99 percent in both fail-safe and fail-secure applications, from up to 20W to 0.3W. This energy-efficient solution offers a cost-effective alternative to traditional solutions.

Recently recognized with a Top Product of the Year Award from the Environmental Leader Product & Project Awards, the EcoFlex and EcoPower solution showcases ASSA ABLOY's commitment to bringing more sustainable security solutions to the market.

SARGENT ASSA ABLOY | Corbin Russwin ASSA ABLOY

Next Generation IN100 Aperio Wireless Lock from ASSA ABLOY

Available from ASSA ABLOY Group brands Corbin Russwin and SARGENT, the next generation IN100 offers the convenience and flexibility of ASSA ABLOY's Aperio wireless technology with the real-time communication of online access control, enabling remote lock or unlock in less than 10 seconds. Ideal for facilities such as schools or corporate office buildings, the IN100 is designed with ANSI/BHMA Grade 1 hardware and is available in cylindrical lock, mortise lock and exit device configurations. The IN100 uses Aperio wireless technology to allow facilities to leverage existing security infrastructure to easily expand access control coverage more quickly and affordably.

The lock also features HID® multiCLASS SE® technology to provide simultaneous support for multiple credential types and HID Mobile Access® powered by Seos®. A patent-pending credential cache is also available to ensure access when the lock is offline from the electronic access control system.

Designed for easy integration into existing access control systems, the IN100 communicates wirelessly to an Aperio hub, which connects to the access control system using Ethernet, RS-485 or Wiegand wiring.

The IN100 is available with a black or white reader and is offered in a range of finishes and levers. It also suites with the IN Series of access control locks, allowing facilities to have a consistent aesthetic throughout the building regardless of technology.

Corbin Russwin ASSA ABLOY | SARGENT ASSA ABLOY

IN220 Power over Ethernet Locks from ASSA ABLOY

Available from ASSA ABLOY Group brands Corbin Russwin and SARGENT, the IN220 Power-over-Ethernet (PoE) lock combines superior aesthetics with the energy efficiency and streamlined architecture of PoE access control solutions for a cost-effective, sustainable solution that leverages existing network infrastructure for enhanced security and easier installations.

The IN220 uses standard IEEE 802.3af PoE-enabled network infrastructure for both power and data, streamlining the installation process, eliminating proprietary equipment, and enabling real-time communication. The lock also significantly reduces standby power consumption compared to traditional access control solutions and reduces materials by combining several separate components into a single lock.

Featuring HID® multiCLASS SE® technology, the IN220 supports a wide range of credential types and HID Mobile Access® powered by Seos® for use with mobile devices with Bluetooth® Smart and/or NFC technology. A privacy button enables local lockdown and shelter in place as well as privacy functionality for applications such as restrooms. Built with integrated ANSI/BHMA Grade 1 hardware, all IN220 locks suite with the IN Series of locks and are available in cylindrical lock, mortise lock and exit device configurations as well as a wide range of finishes and decorative levers.

SARGENT ASSA ABLOY | Corbin Russwin ASSA ABLOY

ASSA ABLOY Locking Solutions with Mobile Access® Capability

ASSA ABLOY offers HID Mobile Access® support across a broad range of access control locks from brands Corbin Russwin and SARGENT. This enables the ability to use phones and other mobile devices enabled with Bluetooth® Smart and NFC credentials with the IN120 WiFi lock, Access 700® and Passport 1000 PoE and WiFi locks, and the SE LP10 Integrated Wiegand lock.

HID Mobile Access® powered by Seos® provides an easy, intuitive solution for issuing, delivering and revoking digital credentials on iOS and Android mobile phones and tablets with Bluetooth® Smart and/or NFC technology. Offering comprehensive security, it protects identity data and keeps over-the-air communications between mobile devices and locks private.

According to Peter Boriskin, Director of Product Management, Electronic Access Control, ASSA ABLOY Americas: "Mobile-enabled locks allow customers to extend the convenience and security of mobile access to a wider variety of applications, while maintaining interoperability with their existing credential base."

Mobile-enabled locks from ASSA ABLOY Group brands are fully compatible with HID Global iCLASS SE® and Seos® cards as well as multiCLASS SE® readers configured for HID Mobile Access®.

ASSA ABLOY Electronic Security Hardware

HES and Securitron have united as ASSA ABLOY Electronic Security Hardware, bringing together the best of both brands: the innovation, strength and service of HES with the durability, quality and no-fault warranty of Securitron.

Founded 40 years ago, HES and Securitron established global reputations by developing innovative electric strikes and electromagnetic locks. As industry leading suppliers of electric strikes, electronic locking systems and access control components, we continue to introduce new and innovative access control solutions including:

- **HES 9800 Electric Strike**, the only electric strike that works with the Adams Rite Starwheel and Interlocking rim exit devices; and
- **Securitron AQ Series Power Supplies**, designed to protect and enhance the performance of all access control devices and systems.

All ASSA ABLOY Electronic Security Hardware products are backed by the industry's most comprehensive no-fault, no questions asked warranty.

ED4000/ED5000 Series Exit Devices from Corbin Russwin

ED4000/ED5000 Series exit devices from Corbin Russwin have multiple security features ideal for environments that require durable and attractive security solutions that will last the life of a building and provide additional resistance against vandalism and unauthorized entry.

They are Independently-verified for cycle and strength testing that exceeds ANSI/BHMA Grade 1 standards for long life and made from 61-percent post-consumer recycled content as per LEED MR credit 4 contributing to your sustainability efforts.

The Motorized Electric Latch Retraction (MELR) option provides remote-controlled latch retraction that delivers quiet, smooth operation for convenient, hassle-free egress. The MELR is easily installed in new applications and available as retrofit assemblies for field updates. It features a maintenance-free design with few moving parts and uses 86 percent less power during retraction than solenoid devices. Plus, MELR is powered by a standard power supply, simplifying installation and increasing system design flexibility.

Sargent 80 Series Exit Device with Lock/Unlock Indicator

Ideal for use in educational facilities, the SARGENT 80 Series rim exit device offers an easy way to lock the outside trim from the inside without opening the door and putting people in harm's way, providing the best combination of durability, simplicity, strength, aesthetics and innovation.

The Lock/Unlock Indicator option (49-) provides a visual means of determining if a door has been secured by the cylinder on the inside of the room. Available on new or existing devices with a double cylinder function, the visual display eases concerns about knowing if doors are locked because the indicator reminds the occupants.

The indicator is located on the exit device chassis displaying a red icon when the device is locked and a white icon when the device is unsecure.

ANSI-ITL for the Best and Easiest Installation of Trine Electric Strikes

Trine's ANSI-ITL is the best way to install both 4-7/8" and 2-¾" Trine Electric Strikes. Lean and efficient - it utilizes only 2 pieces each (screwed together) for the 4-7/8" and 2-¾" cutouts which means less lost parts. The Installation tool can be used with the 4100, 4100DBDL, 4200, EN400, EN435, EN430 electric strikes as well as 478, 478X, 234, and 234X installations on the 3000 series.

Adjustments on the installation tool allow for installation even on the lower cutout of the Schlage L series – for use with the 4100 and 4100 DBDL. Additionally the tool includes a scribe pen for accurately marking the cut-out lines on the frame. Two mounting screws for the tool is also included.

Please note the ANSI-ITL replaces the older 478-ANSI-ITL model number. The ANSI-ITL is fast, easy, and accurate.

Ask your distributor how you can get yours today.

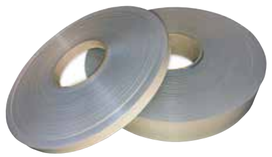
TRINE ACCESS TECHNOLOGY



SELECT Hinges Shim Stock

Doors stay square and gap-free for years. Use SELECT shim stock with geared continuous hinges to reduce the clearance between the door and frame – or with full and half surface hinges to provide additional inset. It will keep your doors from sticking or binding for years. Choose from two materials: Translucent UHMW shim stock blends in with door and frame, comes with adhesive backing for fast-and-easy installations and removal and is available in 100" rolls; or choose the 95" clear anodized aluminum strips without holes. To add shim stock or other SELECT installation problem-solvers to your toolbox, contact your SELECT distributor or visit the links below.

ASSA ABLOY IN120 WiFi Locks

The IN120 WiFi lock, avaiable from ASSA ABLOY Group brands Corbin Russwin and SARGENT, offers the ease and flexibility of WiFi in a streamlined design. By enabling more cost-effective installations, the IN120 allows facilities to expand access control coverage to more doors. Ideal for use in hard-to-wire locations, it uses standard IEEE 802.11b/g/n Wi-Fi connectivity to connect to the access control system, significantly reducing installation costs and eliminating the need for proprietary equipment. The IN120 utilizes HID® multiCLASS SE® technology to support a wide range of credential types and HID Mobile Access® powered by Seos®. Featuring integrated ANSI/BHMA Grade 1 hardware, the IN120 is available in cylindrical and mortise lock configurations, with black or white reader and a broad range of finishes and levers.

SARGENT's BHW Trim for Mortise Locks

Designed for mortise locks, SARGENT's BHW trim integrates the lever and escutcheon, creating a superior design that is safe, easy to use and aesthetically pleasing combined with a durable and reliable construction.

Its streamlined look and feel brings an elegant style to the most demanding environments and fits perfectly in modern behavioral health areas or in school environments.

SARGENT's innovative ANSI/BHMA Grade 1 BHW trim features a low profile which eliminates catch points, typical on traditional lever trim.

Accepted by NYS Office of Mental Health (OMH) and recommended by the National Association of Psychiatric Health Systems (NAPHS) for use in high risk areas, the BHW trim minimizes risk and contributes to patient safety. Its stainless steel escutcheon withstands severe impact and abusive environments.

Available in 37 different functions, the BHW trim can be used in many school applications, including locker rooms, storage rooms and back entryways or in behavioral health-specific environments.

ML2000 Series Mortise Locksets from Corbin Russwin

The ML2000 Series is an ANSI/BHMA Grade 1 mortise lock designed to withstand the most abusive environments. Available in 51 mechanical and electrified functions – including vandal resistant and behavioral health options – the ML2000 Series is constructed of heavy-gauge steel with unique, patented features and an optimized torsion spring design that has fewer moving parts to give the lock an extremely smooth and consistent operation. All this adds to its versatility and reliability to complement any application.

Designed to meet the rigors of high-traffic commercial, institutional, industrial and government applications, the lockbody is constructed of heavy-gauge steel, our patented Quick Reversible latchbolt, and a 1-inch stainless steel deadbolt. It has been tested to easily surpass all BHMA standards, providing all the strength and security required in a Grade 1 mortise lock.

Furthermore, a wide variety of trim designs and functions and a 10-year warranty lend to the ML2000's versatility and reliability. Utilizing the proven ML2000 Series mortise lockset, you can also combine simplicity with access control and use the electrically controlled mortise lock. The ML2000 Series provides self-contained, integral continuous-duty, solenoid-operated remote locking and unlocking.

The ML2000 Series is the ideal choice for use in offices, schools, hospitals, hotels and other high-use applications.

Yale nexTouch Sectional Mortise Keypad Lock

Expanding the Yale nexTouch™ product line for even more applications, the nexTouch Sectional Mortise Keypad Lock provides robust security for a variety of commercial applications and multi-family buildings. Just like the original cylindrical nexTouch, the mortise lock platform is ANSI/BHMA Grade 1 certified with keypads offered in capacitive touchscreen or ADA-compliant pushbutton versions. Other features include privacy mode, optional security deadbolt, 9V battery backup, support of up to 500 unique user codes and more. Yale nexTouch can be used as a standalone keypad lock or easily be upgraded to more advanced technologies, such as data-on-card or wireless. The ability to install a single lock that enables multiple technologies allows facilities to minimize their investment costs while providing an easy migration path to more connected systems.

TownSteel Smart Interconnect Lock

The TownSteel e-Genius Smart Interconnect Lock offers a double-locking feature with ANSI/BHMA Grade 2 Security. Designed for use in residential and multi-family housing, the product's design provides the ability to lock or unlock from both the inside and outside with single motion egress. It is programmable with up to 99 PIN codes and 800 MIFARE RFID cards/stickers capacity per lock. The lock also has a mechanical key override and offers a secure multi-functional app that enables a wide array of programming via an encrypted WiFi link. The unit is powered by four AA batteries and no hard wiring is required.

RFID Electronic Lock from dormakaba

With a streamlined design, dormakaba's E-Plex 7900 heavy duty electronic lockset functions in standalone or wireless modes for cylindrical mortise and exit trim applications. When used with Enterprise software, the locks offer the same trusted function and reliability of all E-Plex products. With variable models, each designed to function with a designated list of credential types such as Prox, MiFare and iCLASS, the product can be used in many access control environments. The wireless model integrates with dormakaba Enterprise software using a ZigBee wireless network, which creates a two-way communication from lock to Enterprise software.

Top Notch means
top people.

A commercial door hardware customer called in a panic on a large housing project. The systems integrator walked off the job, and they faced a $14,000 fine for every day that the job wasn't complete. Top Notch Sales Engineer Bryan Boggs, who specializes in Electronics and Access Control products, flew out to meet with our customer and the general contractor. He helped configure, program, and commission the system so it was operational. He even trained the lead technician on troubleshooting the system. This extra level of service got our customer out of a big bind.

Bryan has been with us for 3 years and he's always there for his customers. It's what he does and it's what we want him to do.

We are Top Notch – and so is Bryan.

Wisenet PNM-9000VQ Multi-Direction Camera from Hanwha Techwin America

The Wisenet PNM-9000VQ (4-head) from Hanwha Techwin America combines powerful performance at an affordable price. For maximum adaptability, configurable fixed-focus lens/CMOS sensor modules are available in multiple fields of view which can be easily installed onsite.

With high frame-rates (60fps for 2MP, 30fps for 5MP), true WDR (Wide Dynamic Range) and a powerful suite of analytics built in, the camera brings a new level of quality and value to the multi-directional camera market. Utilizing a single IP address over one cat5 cable requires only one VMS license further reducing the cost to install, service, and support.

A perfect solution for hospitals, schools, and retail, the PNM-9000VQ allows for individual on-screen displays and a full suite of video analytics including loitering, directional detection, fog detection, tampering, motion detection, and objects entering or exiting an area. Hallway view aspect ratios are also supported for monitoring of vertical shaped areas.

Seco-Larm's ENFORCER Analog Camera (EV-Y5105-N2SQ)

Hidden in plain sight. The *ENFORCER*® 4-in1 HD TVI, CVI, AHD, Analog, Wall-Plate Camera (EV-Y5105-N2SQ), is a versatile addition to your CCTV setup.

Its discreet, weatherproof (IP67) construction easily adapts too many environments, and its wide 120° viewing angle captures the scene without being detected.

The unit comes fully equipped with a $^{1}/_{2.8}$" 2MP Sony STARVIS CMOS, 2.9mm Wide angle lens, 2D Digital Noise Reduction (2DNR), Digital Wide Dynamic Range (D-WDR), and is powered with 12VDC Operating Voltage.

The adjustable mounting angles provide many different ways to install. The camera comes with both a single gang and slim line (mullion) mounting plates or you can just drill a 15/16" hole and mount the camera in a variety of materials.

Here at SECO-LARM® we also have a wide range of products available in access control, wireless, CCTV, audio/video and security.

FLIR TruWITNESS Mobile Sensor Platform

FLIR TruWITNESS is a wearable sensor platform designed for city-level security and public safety operations, combining video, audio, location data, Internet of Things (IoT) capabilities and cloud and management software in one solution. Designed for public safety organizations that require on-scene, real-time mobile surveillance, the unit is worn on an individual's body or mounted inside vehicles. It includes visible-video, audio, global navigation satellite system (GNSS), gyroscope, accelerometer and magnetometer sensors. These sensors combine to send alerts and stream data to a central command center in real-time while acting as an IoT device, triggering nearby fixed and PTZ security cameras, and other connected sensors during an alarm event.

Dahua Low-Light Color Cameras

Dahua Technology has added the DH-IPC-HFW4239TN-ASE 2MP Fixed Bullet and the DH-IPC-HDBW4239RN-ASE 2MP Fixed Dome to its eco-friendly enhanced Power over Ethernet (ePoE) product family. Both use a high-performance sensor and ISP and an achromatic, large aperture lens (F1.0) to produce crisp, clear color images in low-light environments. This technology allows the camera to remain in color mode and to capture more available light to reproduce color images with superior detail and contrast in applications with at least 1 lux of ambient or artificial light. The cameras also feature innovative enhanced Power over Ethernet technology, a plug-and-play solution that transmits power and data over long distances via Ethernet or coaxial cables.

C1M1 Dual-Path Alarm Communicators from ELK Products

ELK Products' C1M1 Communicators significantly reduce transmission time of emergency messages. Dial capture, data bus decoding and cloud servers are not required, eliminating delays in communications. C1M1 provides super-fast, full data reporting to Central Monitoring Stations over IP and cellular pathways and automatically directs transmissions over the best pathway. C1M1 provides remote access with no port forwarding or extra fees. Installers can remotely program M1 controls over IP or cellular. Consumers can control the M1 remotely via the free ElkLink mobile app and web portal, as well as eKeypad and M1 Touch Pro apps. C1M1 provides email/text notifications for arm, disarm, and alarm events. It also supports ELK's IP based software and interface partners. ELK-C1M14GSM supports GSM networks and ELK-C1M1CDMA supports CDMA networks.

M1 Control Systems from ELK Products

M1 provides the ideal combination of security, energy management, and integrated control solutions. M1 delivers rock solid security and life safety with comprehensive detection and state-of-the-art reporting capabilities. It features a fast microprocessor for enhanced speed, capability and security. Event notifications can be provided via phone call, email, or text message. ELK's Two-Way wireless sensors feature multi-level security to prevent hacking. Using an integration friendly approach, M1 offers full-featured automation capability to enhance safety, comfort and convenience. M1 provides intelligent control of lights, thermostats, locks, gates, garage doors, water valves and more. Smart features help reduce energy costs without sacrificing comfort. M1 can be remotely controlled from smartphones, tablets, PCs, web browsers and more – with or without monthly fees.

Long-Range LiDAR from Optex

Version 8.0 of the RLS-3060 series firmware and REDSCAN Manager from Optex feature a number of upgrades for the long-range, 190 degree 2D LiDAR series. Both models, the RLS-3060L and RLS 3060SH, offer more flexibility in managing dry contacts with the option to switch from normally open (N.O) to normally closed (N.C). The new version brings features to the standard model 30m radius RLS-3060L that were previously only available in the high-end model. Four detection areas can now be independently adjusted on an analog connection, and up to eight areas can be adjusted on an IP connection. The shape of the detection area can also be customized to the layout of the site.

2GIG Gun Motion Detector

Nortek Security & Control (NSC)'s 2GIG Gun Motion Detector is a sensor that incorporates a steel, three-digit combination trigger lock, and will provide a timely alert to a homeowner's 2GIG GC2 or GC3 touch panel if the weapon is moved. When used in conjunction with NSC's back-end partners Alarm.com and SecureNet, a push notification can be sent to the homeowner's smartphone, alerting them of the weapon's movement. The motion detector fits most handguns, rifles and shotguns. As with any trigger lock, the California Gun Safety (DOJ) Certified device should be used only on unloaded weapons. The unit is part of the new 2GIG Notification Sensors line.

POWER SUPPLIES

Altronix Expands Trove Access and Power Integration Series

The new **Trove1M1WP outdoor enclosure** with backplane allows for easy integration with Altronix power and Mercury/Lenel access controllers. The durable enclosure with stainless steel continuous hinge and lockable latches is NEMA 4/4X IP66-Rated for use in harsh outdoor environments. It accommodates up to two 12VDC/7AH batteries for back-up operation, and can be pole mounted using the optional PMK2 Pole Mount Kit.

The new **Trove Rackmount Series** provides integrators with the versatility to incorporate power in the same rack mount unit with the access controllers, or consolidate power for their system in a single enclosure, saving valuable rack space. The solution accommodates a host of access controllers including Mercury/Lenel, HID/VertX, Software House and more. Additionally, an Altronix-only backplane allows for the versatility to design a custom rack mount access control power supply. All rack-mount units include a tamper switch, cam lock and Z bracket for ease of installation and wiring.

These additions simplify board layout and wire management, while reducing installation time and labor costs. It is an ideal solution for vehicle/pedestrian gate access control.

Altronix also offers a free Trove System Design Tool (https://www.altronix.com/system_design_tools/trove) to further simplify product selection and design.

ELK-965 Low Battery Cutoff and Master Power Switch

An extended power outage can wreak havoc on an alarm system. As backup battery voltage drops, the alarm system may begin to operate erratically and a deep discharge can damage the backup battery. Eliminate these issues with the ELK-965 Low Battery Cutoff and Master Power Switch. This compact, easy to install device works with any 12 volt control panel or power supply. The ELK-965 automatically cuts off when battery voltage drops below 10 VDC to prevent a "run-away" system and battery deep discharge. Installers will also value the manual AC and battery on/off switch for simplifying system service and eliminating emergency service calls. The ELK-965 is backed by ELK's hassle-free LIFETIME warranty. Also available in a money saving 20 pack, the ELK-965B20. www.elkproducts.com

ELK Auto-Resetting AC Transformers

For more than 17 years, professionals have trusted ELK's AC transformers for reliable performance. Auto-resetting PTC overload protection prevents transformers from being blown by a short or overloaded circuit, saving installers time and the cost of a new transformer. Simply remove the short/overload to re-start. Built-in wire strain relief prevents intruders from pulling wires loose from the transformer terminals. A green LED indicator provides visual confirmation of power output. An electrical outlet mounting tab allows the transformer to be securely attached to the outlet. ELK transformers also feature a grounding prong and terminal. ELK's AC transformers are UL listed, RoHS compliant and have a hassle-free LIFETIME warranty. ELK-TRG1640 is rated at 16.5VAC, 45VA, while ELK-TRG2440 is rated at 24VAC, 40VA. www.elkproducts.com

COMMUNICATIONS & MASS NOTIFICATION

Everbridge Critical Event Management Platform

Enterprise CSOs and COOs understand that their organization is constantly under attack, but they can never predict when or if an attack will deal a business-disrupting blow to their defenses. At the same time, executives never know if or when a physical emergency will put information resources, employees, and other key stakeholders in harm's way. As enterprises face the prospect of dealing with a growing range of threats, they should formalize and consolidate their operational response to a wider variety of threats.

Everbridge enables customers to integrate and consolidate disparate tools to deliver the right information at the right time to the right individuals, so the incident response team can make the best possible decisions to manage a crisis. It is designed to help visualize threats, coordinate the appropriate resources, and manage the crisis management process for any size or type of event.

It enables incident response teams to operate and communicate more effectively to reduce the impact duration of a critical event, limit business disruption, and ultimately protect employee safety and company brand reputation. Having a single tool with a consolidated view and a streamlined interface can reduce errors and potentially save lives. At the same time, being able to audit response rates enables greater fine tuning of the system to improve event handling in the future.

Aiphone Emergency Towers

Aiphone has enhanced its emergency towers and wall boxes with built-in, UL-Listed electrical boxes to easily satisfy local electrical codes. Compatible with either Aiphone's network-based IX Series or hardwired IS Series emergency intercom systems, the modular tower designs also include an optional video surveillance camera arm module that enables a second camera to be mounted to the top of the towers, providing security personnel with a second line of sight to more accurately assess and respond to situations. Additional new tower features include: built-in mounting hardware for power supplies or accessories, and rear access panels to easily pull wire from top to bottom.

GAI-Tronics SP2 Fiber Optic Paging Stations

The SP2 serverless IP paging and intercom system from GAI-Tronics combines the simplicity of "press to page, release to party" operation with multi-cast Voice over Internet Protocol (VoIP) technology. Capable of providing virtually instant communication in the most demanding of environments, the server-less system uses multicast technology, bypassing the need for servers and improving speed, simplicity, reliability and ease of installation. Available in indoor and weatherproof wall-mount as well as in explosion-proof configurations, there is no keypad or extensions to memorize. Simply lift the handset, select a paging zone, squeeze the handset pressbar, and make an announcement over the system speakers. Release the pressbar to talk on one of the five available party lines.

2019 Chevy Cruze Flip Style Keys from Strattec

New for 2019 Chevy Cruze Flip Style keys. The keys are system-specific either using the XL7 that is 315 MHZ or the XL8 Update using 433 Mhz. This info can be found on a build sticker in the trunk called SPID. Identify the field RPO and it will say XL7 or XL8. There is a possibility the dealer could have updated the system in the vehicle and the sticker may not reflect the correct system. Try and obtain as much information as possible before selecting which key to program. To see all the applications for these keys, visit the links below.

ELK-6051 Two-Way Wireless Carbon Monoxide Detector

ELK has released the new ELK-6051 Two-Way Wireless Carbon Monoxide Detector. The ELK-6051 combines a proven, high reliability electro-chemical carbon monoxide sensor with ELK's Two-Way Wireless technology for reliable operation and extended battery life. The ELK-6051 Carbon Monoxide Sensor has a 10-year life and operates with two standard AAA batteries. Easy to understand LED indicators provide clear visual indication of alarms, faults, power and RF acknowledgment. A free diagnostic smartphone app simplifies field testing, displaying sensor status information and test data.

STI Universal Stopper for Fire Pulls

STI's Universal Stopper is an indoor/outdoor polycarbonate cover (model STI-13020FR) which offers protection against false fire alarms, physical damage (both accidental and intentional), dust and grime, as well as severe environments inside and out. The clear cover protects dual-action pull stations without restricting legitimate operation. When the cover is lifted to gain access to the actual alarm, a piercing warning horn sounds. Immediate attention is drawn to the area and the prankster will either run or be caught before a false alarm is pulled. The UL/cUL Listed cover is flush mounted. Many other mounting options, colors and labels are available.

Interlogix Photoelectric Smoke Detector

The Interlogix SDX-135Z photoelectric smoke detector with heat and freeze sensors uses wireless connectivity to ensure that when one unit senses smoke, all detectors on the network will go into alarm mode. The detectors can be used simultaneously as a smoke/heat detector and freeze sensor – which alerts users if surrounding area temperature drops below a certain point. They feature a 10-year sealed battery and continually monitored operational status, providing a visual notification of network or unit failure. The units are compatible with the Interlogix Simon, NetworX, Concord and UltraSync alarm panels.

Speed up installations with these new solutions.

Whether you're renovating high-traffic entryways or putting in new frames and doors, you want your job to go faster and easier. Now there are three ways to simplify installing SELECT geared continuous hinges:

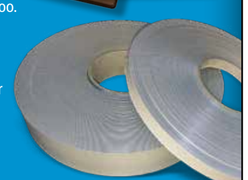
HB375 DRILL BIT

No center punch needed. SELECT's .375-inch drill bit is designed specifically to speed up installation of our geared continuous hinges.

PIVOT HINGE HOLE COVERS

Instant improvement. Mask the unsightly holes left by previous pivot hinge preps with SELECT's self-adhesive covers. Block out insects, dirt and water, too.

SHIM STOCK



Make invisible adjustments. Square up doors and frames without ruining their appearance. SELECT's shim stock comes in clear anodized aluminum strips or 100-foot rolls of translucent UHMW.

Honeywell VESDA-E Advanced Smoke Detection

Honeywell's Intelligent VESDA-E advanced smoke detection technology – capable of detecting and reporting smoke at its inception, before a fire develops – can now be integrated with NOTIFIER and Gamewell-FCI fire systems in commercial buildings without the need for additional hardware or wiring. The Intelligent VESDA-E detector resides on the Signaling Line Circuit (SLC) loop of a fire panel and directly communicates with the fire systems. Unlike traditional spot detectors, VESDA-E's patented technology actively draws in air from the environment and can notify building staff to potential fires before they develop. The technology is ideal when very early warning of a potential fire is needed and for highly secure environments where routine maintenance and servicing would disrupt daily operations.

Napco StarLink Fire LTE Communicators

StarLink Fire LTE Universal Commercial Fire Cellular Communicators from Napco replace two FACP POTs landlines and are now available with Verizon LTE for cellular reporting of any brand fire alarm system. Easy to install and afford, the unit eliminates power supplies. Additionally, dealers can keep fire accounts protected for the long run, as the new LTE (Long Term Evolution) promises the longest cellular lifespan. A low-cost, dependable solution for retaining and/or taking-over any brand fire alarm account old or new, the communicators still feature Napco's long-standing $100 trade-up offer on all models, for trading up from old radios, old networks or even on new installations.
