

## VoIP SIP Paging Horn with Multicast from Viking Electronics

The versatile 300-IP SIP Paging Horn from Viking Electronics is designed for voice paging via SIP and multicast. It also allows for background music, mass notification tones, and messages via multicast. The unit registers as a third-party SIP endpoint device to a hosted or local VoIP SIP phone system. The PoE powered paging horn can automatically answer inbound calls and allow paging. The same horn can be assigned to as many as 10 multicast groups, which allows it to receive prioritized pages.

## Turing AI for Retail

Turing AI has launched Turing AI for Retail, which combines the company's retail-specific machine learning algorithms and intelligent workflow automation with a retailer's existing camera infrastructure to provide deep insights of the customer's end-to-end journey while measuring key demographic data and associated buying patterns, such as intelligent queue management, foot traffic analysis, merchandising effectiveness, loss prevention, and occupancy monitoring. The machine learning algorithm categorizes the information in an easily digestible format.

## Wearable Safety Devices from Blackline Safety

Blackline Safety's cloud-enabled G7

wearable safety devices help people work smarter and safer. The easily configurable wearables – small, wireless devices worn like a cellphone – accurately detect gas leaks, falls and other health events in all types of environments, from lone workers in the field to industrial workers. They can also be used for contact tracing purposes or to determine how often workers travel through high-risk areas. They operate on available cellular, with optional satellite connectivity.

## Iris and Face Identification Readers from Iris ID

Quickly and conveniently moving large numbers of people through airports, across borders or accessing many other locations will be easier with two new Iris ID IrisAccess products – the iCAM D2000 and the IrisBar (OU60B). Both compact and touchless readers accurately identify people through advanced multi-modal biometric technologies: fused iris and face identification systems. The self-serve iCAM D2000 is easy to use, with large capture volume and audio/visual prompts guiding users to a frictionless experience.

## Fence Alarm Processors from RBtec

RBtec Perimeter Security Systems has released two-zone (LPU-402) and four-zone (LPU-404) fence alarm processors, and their new accessories. The processing units work with the supplier's line of sensor cables to provide real-time perimeter intrusion detection. Based on modular design, the processors are built from two mainboards and three sub-boards mounted on sockets, allowing for easy future upgrades or replacement if needed. They support the connection of up to four zones of up to a conditional maximum of 500m/1640ft per sensor cable.

## Web-Based VMS Manager from Qognify

Qognify has launched the

Umbrella for Ocularis web-based central VMS management platform. Ocularis customers with large or distributed video surveillance installations can use the software to centrally monitor and remotely manage and configure every VMS installation across their deployment. Umbrella can be either hosted in the cloud (e.g., on Microsoft Azure and AWS) or on-premise, and it provides enterprise organizations with a comprehensive view, monitoring the status of every connected camera and server, highlighting those which require attention.

The Latest From Security Product Manufacturers

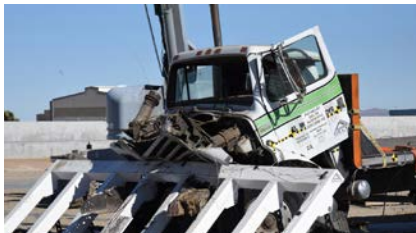

### Camera Mounting Systems from Vicon

Vicon has introduced new and versatile mounting options that expand the use cases for many of its cameras. The Wedge Angled

Base for V2000D Micro/V2360 Fisheye Cameras allows the camera to be surface mounted on a wall or ceiling to provide additional angles. The Recessed Kit for the 360 Multi-Sensor Camera allows for installation into a drop ceiling. In-Ceiling Mounting Kits for the V2100D provide mounting options for drop or hard ceiling indoor applications.

### 16-Foot Open Frame Vehicle Barrier from Delta Scientific

Delta Scientific has successfully tested a 16-foot version of its DSC550 shallow foundation open frame barrier to the new ASTM F2656-20 standard, which measures the penetration level from the leading edge of the barrier vs. the back-side of the barrier like the previous standard. The barrier features a shallow foundation of only 24 inches (61 cm), which alleviates the concerns of interference with buried pipes, power lines and fiber optic communication lines in urban applications.

### Fiber HDMI Cables from TechLogix Network

Enable real-world 8K HDMI installations with TechLogix MOFO HD21 Series fiber-based cables. Featuring a true fiber optic core for interference-free, uncompressed 8K HDMI signal transmission up to 30m without the need for in-line boosters or power supplies, simply run the cable and connect it to source and destination devices. The fiber core can be spliced and re-terminated with standard fiber optic tools and connectors. The cables support a 70-lb. pull-rating and 1.8 inch minimum bend-rating.

### FirstNet-Approved Universal Alarm Communicator from DMP

DMP's newest DualCom Universal Alarm Communicator is approved for use on FirstNet, the

only nationwide, high-speed broadband communications platform dedicated to and purpose-built specifically for America's first responders and the extended public safety community. The product makes it easy to upgrade old systems to LTE, and but as

phone lines drop out, it gives a way to connect to older panels with dialer communicators only.

### 360-Degree Cameras from Oncam

Powered by the Qualcomm Vision Intelligence Platform, Oncam's C-08 8MP 360-degree camera leverages state-of-the-art technologies, including StreamLite+ Compression, TrueDetail HDR, and Advanced Light Management to deliver leading image quality in challenging light conditions while lowering bandwidth and storage demands. It incorporates a clean, modular design and comes in a compact indoor form factor or robust Outdoor Plus. It can be ceiling- or wall-mounted and includes a range of complementary accessories to support a variety of installation needs.

### PoE Test Tools from Vigitron

Vigitron Inc.'s new network test tools have been specifically designed to test for the unique PoE and bandwidth requirements for networks designed for security applications. This especially applies to networks used for IP/PoE cameras where high bandwidth and PoE are required. The equipment provides the ability to test existing network capacity and alert potential upgrade requirements. They can confirm operating installation status and provide full commission reports and record keeping.
