5G LTE-M Fire Communicator Line from Telguard

Telguard has unveiled an all-5G LTE-M Fire Communicator line, with all models available now at distributors. Whether sole path, dual path, primary or backup, there is fire communicator that will fit the needs of virtually any application and will be approved by AHJs. Perfect for POTS replacements, upgrades or new installs, the communicators use LTE-M bands for 4G and 5G compatibility, better in-building penetration, and long product life. They interface with the panel over a single DACT connection for universal compatibility.

Hanwha Techwin's Wisenet WAVE 5.0 VMS

At GSX, Hanwha Techwin unveiled the Wisenet WAVE Video Management

Software (VMS) Version 5.0, which expands the platform's focus on cybersecurity, system usability, convenience and interactivity. Operators can search for objects identified by analytics and stored in video archives by specific attributes (object type, color, gender, age, clothing), viewable in a new pop-out window. Other new features include: Metadata-driven archive backup, web page proxy via servers, two-factor authentication (2FA), grouping of resources (cameras, streams, encoders, web pages) in the desktop client, audio mapping, automatic updates encrypted archives, video preview thumbnails and more.

CellComEX from DMP

DMP's CellComEX Universal Communicator will help DMP dealers with takeovers as the 3G sunset rapidly approaches. When system upgrades call for a cell-only solution, the unit offers the same feature-rich benefits as DMP's CellCom module. When four zones of expansion are not needed, it makes upgrading legacy panels faster and more affordable. "EX" stands for Express, and with one zone, one

output and one tip and ring terminal, it can be deployed quickly with minimal programming or setup steps. Its compact enclosure is ideal for tight installations.

Camden Door Controls Surface Mount RIM Strike with Latch monitoring

At GSX, Camden Door Controls introduced a surface mount RIM strike with preload. The CX-EPD1289L grade 1 surface mount RIM strike with latch monitoring also offers a 'Universal' strike design that delivers application flexibility, with both UL security and fire listings. The patented design of the strikes enables them to operate with up to 15 pounds of preload pressure. This eliminates the need for future service calls for doors that go out of alignment after the strike is installed. With one universal RIM strike that includes both security and fire ratings, field-configured latch monitoring, selectable fail safe/fail secure operation, and dual voltage, there is no need for integrators to stock a range of RIM strike models.

Genetec Security Center 5.11

Unveiled at GSX, version 5.11 of Genetec's Security Center gives customers access to every module, including Omnicast (video monitoring), Synergis (access control), AutoVu (automatic license plate recognition), Sipelia (intercom) and intrusion monitoring, out of the box. Beyond simplifying the path to unification, the integrated security management system includes variety of features, including KiwiVision analytics (privacy protector, people counting, security video analytics and camera integrity), visitor management, advanced mapping functions, threat level management and more. The new version also features the new Genetec Web App.

Alarm.com Smart Thermostat HD

Alarm.com's Smart Thermostat HD is fully integrated into its smart home security system and is Energy Star-Certified. The connected thermostat offers end users next-level comfort and control, plus the ability to monitor the health of the heating and cooling systems to optimize performance and avoid costly repairs. Featuring a sleek form factor and color touchscreen display, it is easy to install thanks to an on-display installation wizard, and homebuilders can take advantage of immediate energy savings prior to account setup. Other features include in-app diagnostic alerts, monthly HVAC health reports, motion sensor that wakes display on approach, and humidity and vent control.

HySecurity StrongSlide Crash-Rated Slide Gate

Hysecurity unveiled its crash-rated StrongSlide M30 Hostile Vehicle Mitigation (HVM) Gate at GSX, the company's first crash-rated slide gate solution. The gate achieved an M30 P1 rating and has a 24-foot clear opening. Other features include an all-in-one steel frame, bottom-track cantilever crash-rated gate plus operator and barrier solution with superior gate mechanics, streamlined installation and accessible servicing. The lightweight arrestor design keeps weight off the gate to reduce wear and improve reliability and service life.

Traka Touch Pro Key Cabinets

Traka's new Touch Pro series of intelligent key cabinets, available for purchase January 2023, will come in four sizes to suit customer demand and builds on the strong foundations of its predecessor, Traka Touch. New mechanical design elements enhance the security, durability and life of the product. More storage capacity ensures larger key sets can be accommodated across all systems, and its sleek, modern and modular design blends with most environments, which makes it easier to install, service and decommission, thus minimizing disruption and maximizing time in service.

Irisity IRIS+ AI-powered Video Analytics Solution

At GSX, Iristy introduced IRIS+, an AI-powered video

analytics solution that combines the capabilities of Agent Vi's innoVi and Irisity's Iris into one platform. A flexible and scalable analytics solution incorporating advanced versions of commonly used analytics, the platform offers a streamlined user experience, statistics functionality, and a new deployment planning tool. Analytics include broad object classification with high accuracy levels in the most challenging environments.

The Latest From Security Product Manufacturers

Aiphone One-Piece Aluminum Towers

At GSX, Aiphone announced the launch of its TW-SE and TW-SA aluminum one-piece towers that are easier and more cost-effective to ship and install due to their lightweight material. The TW-SE tower is marked with large “EMERGENCY” lettering and the TW-SA aluminum tower is marked with large “ASSISTANCE” lettering. Both are used for housing IX Series emergency stations and offer emergency call applications. The towers are powder-coated blue, they include a blue beacon that strobes during emergency calls, and they have reflective lettering on three sides. The towers feature a scalable system with unlimited emergency capability and integrate with key platforms including access control, VMS, NVR, paging and network cameras.

Fence Climb Detection Sensor from Magnasphere

Magnasphere’s MACS-S3H fence climb detection sensor for rigid, semi-rigid

and chain-link fences is housed in a polymer case with fiberglass featuring a compact and stylish design that blends in aesthetically. Its special design enables quick installation with a single central screw and fixing plate on various types of fences. The system is compatible with two sensor buses each, for a maximum of 120 sensors. Each sensor can be calibrated individually so a noisy fence panel (next to gates, train tracks, etc.) doesn’t require reducing the sensitivity on the entire fence line.

Ava Flex Camera from Motorola Solutions

Debuted at GSX, Motorola Solutions’ new Ava Flex camera is ideal for businesses with either single locations or multiple distributed sites that are looking for a lower barrier to entry for cloud-based, AI cameras. Simple to install and operate, it provides advanced functionality and sensory capabilities typically not available in an entry-range camera. When used with the Ava Aware cloud video management system, it provides AI-based video and audio analytics, as well as features including proactive alerts, similarity search, occupancy counting, anomaly detection and more.

Camio Flex Video Surveillance AI Search

Camio announced at GSX a way to run sophisticated Computer Vision and AI workloads at the edge as Kubernetes clusters, reducing the costs of deploying security and business intelligence AI applications by 73%. Camio Flex, the new Cloud Native Kubernetes Video Management System alternative, runs AI anywhere along its video processing pipeline – from edge to cloud – to reduce hardware and automate critical storage, scale, and lifecycle management functions. General-purpose computing tasks – once reserved for sophisticated data centers – can be orchestrated at the edge, even across IP cameras on a 5G/CBRS network.
