Mullion Mount IP Video Door Station Helps to Reduce Germs at Entrances

Under seven inches tall, and a slim width under two inches, the new IX Series IX-DVM Mullion Mount IP Video Door Station has a small footprint with a BIG IMPACT.

Being UL Listed and TAA Compliant, this feature rich station opens doors to more job opportunities with its compact form and its various built-in benefits:

- WDR camera avoids sun glare and silhouettes regardless of the mounting angle.
- LED indicator lights meet ADA regulations with clear visual cues.
- Touchless call sensor reduces the spread of germs.
- Card slot for microSD™ simplifies on-board recording.
- Aluminum die cast withstands everyday use at busy entrances.
- Low-light LED provides illumination when conditions are too dark.

Whether installing new IX Series systems, or upgrading existing ones, theDVM will impress customers with its timeless style, expanded capabilities, and its amazing flexibility to be mounted in more compact locations.

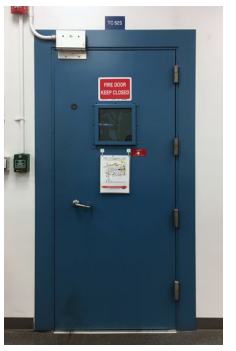
Special Purpose Doors for Military and Government Buildings



Krieger's special purpose doors are custom-manufactured to protect personnel and property while meeting specialized hybrid performance requirements in U.S. military and government buildings.

Blast and Pressure Resistance Doors – Krieger's blast-resistant doors meet UFC 4-010-01: DoD Minimum Anti-terrorism Standards for Buildings, Anti-Terrorism Force Protection (ATFP), and industrial PIP standards to protect personnel and property from explosions and explosion-borne projectiles.

Doors with UL 752 Bullet Resistance – Krieger's bullet-resistant doors protect personnel and property from small arms fire by meeting UL 752 Levels 1-10 and N.I.J. Levels I, IIA, II, IIIA, III, and IV. Ballistic standards comply with MIL-SAMIT Parts 1 and 2. All Krieger door assemblies are available in manual or power-operated as needed.

New! Radio Frequency/Acoustical Hybrid Door – Krieger now offers a unique hybrid door with 40 dB radio frequency (RF) protection and an STC 51 acoustical rating—all in a standard 1¾" thick door panel. The thinner design makes it an ideal choice for any new or existing construction where RF and acoustical ratings are required. Krieger has a long history of providing SCIF and RF door combinations for military and government installations, including the Pentagon. SCIF door assemblies are rated up to STC 55 and RF shielding meets TEMPEST and IEEE 299 standards.

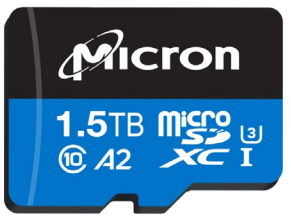
Micron i400 microSD Card



Technology innovations like 5G, artificial intelligence (AI) and the Internet of Things (IoT) are driving growth in AI-enabled cameras in video security applications and data storage at the edge.

Micron's microSD card is specifically designed for handling continuous high-quality video recording and multiple AI capture events concurrently.

Adopting edge storage through the microSD card can enhance video security system performance by enabling flexibility and scalability, and by reducing network bandwidth requirements and lowering the total cost of ownership.

Unlike most memory cards on the market that are consumer-grade and have limited write capability, Micron's i400 microSD cards are designed for AI-enhanced video applications with features such as:

- High Endurance (32GB to 1.5TB): Supports up to 5 years of high-quality, continuous, 24/7 video recording and up to 4 months of storage (assumes a bit rate of 1 megabit per second) with the highest-capacity microSD card in the world.
- Outstanding Recording Performance: The optimized design delivers sustained performance for concurrent 4K video recording and up to 8 AI capture events every second.
- Industrial Quality: Reliable high quality provides a 2 million hour mean time to failure (MTTF) rating, plus 5-proof protection encompassing water, shock, x-ray, magnet and impact.
- Smart Management: Health monitoring tracks usage and card health, and the field firmware update provides a secure way for the card to be updated remotely when needed.

Schlage Electronic Locks with HID Credential Support

At Schlage, we understand that customers value solutions that are open, interoperable and flexible. We offer three series of electronic locks that allow for expansion of access control deeper into the building while utilizing existing HID® credentials. The Si option on Schlage AD Series, NDE and LE electronic locks provide full support for the secure application area of HID iCLASS®, iCLASS SE®, Seos® and NFC mobile credentials as well as Schlage MIFARE® smart and mobile credentials. This interoperability gives our customers the freedom of choice when it comes to credential technologies.

Locks available with the Si option:

- NDEBSi mobile enabled wireless locks for cylindrical applications
- LEBSi mobile enabled wireless locks for mortise applications
- AD Series with Si or SiK reader for cylindrical, mortise or exit device applications

Electronic locks can be customized with a variety of lever designs, finishes and function to meet the needs of the opening. Schlage electronic locks have been integrated into leading physical access control systems through our PACS alliance program; features and capabilities will vary by provider.

RIM PANIC ELECTRIC STRIKES THAT DO MORE...

THE ENHANCED 4850

PoE Friendly™

REPLACES
9400 & 9600
IN ONE BOX

THE SUPERIOR 4800F

3 HOUR FIRE RATED

REPLACES
9500 & 9600
IN ONE BOX

The 4850 1/2” strike is an incredibly flexible rim panic strike. It comes with 3 spacers and an open latch cavity to accept up to a 1“ throw and installation situations. Being PoE friendly means it uses less amps and is easier to use without additional power supplies.

The 4800F 3/4” strike is a heavy-duty rim panic with a simple 1 piece locking mechanism that will outlast the competition. It’s 3 hour fire rated with no upcharge (like a 9500) and can be used in everyday installations whether it’s needed or not. Always be prepared!

INTERNET OR CELLULAR SYSTEMS

DKS Telephone Access Systems can be connected with an internet or cellular connection. Both include the DKS Cloud that allows administrators to program the system from any internet connected device; laptop, tablet or smartphone! Team this with DKS' 900 MHz wireless access expansion to control access for up to 24 entry points.

PROXPLUS™ SECURE CARD READERS

For those applications that require a higher level of security than standard Proximity Card Readers and cards can offer. ProxPlus cards are programmed with a unique identifier, making them extremely secure and difficult to duplicate. And, since the DoorKing Card Reader outputs the card code in a 26-bit Wiegand format, they are compatible with almost any Access Control System on the market.

DKS DOORKING®

TRAFFIC CONTROL

DKS' latest innovations increases safety and lessens risks of damage. Developing its Pedestrian Protection System, and lighted barrier arms for better visibility – DKS has also released a Break-away arm system to help avoid damage to vehicles and the operator / arm. Available as new systems, and also to retrofit existing 1601 DKS Barrier Gate systems.

DC OPERATORS

When it comes to securing a high traffic gate in any location, or with unreliable power, DKS manufactures a full-size DC Gate Operator. With the ability to switch from AC to DC seamlessly and pull a full-size gate for hundreds of cycles from backup batteries, DC also means the operator can be completely off the grid with a solar power supply.

In July, SecurityInfoWatch.com unveiled the security industry's first-ever Readers' Choice Awards program that is 100% decided by the very people who use, install – and even compete against – these products every day. More than 100 security industry manufacturers and software developers submitted products introduced in the physical security industry over the 12-month span of June 2021 through June 2022 for voting.

Once the vendor submission period ended, voting was open through the full month of September to any SecurityInfoWatch reader (one vote per IP address) in 13 different product categories, where we received more than 1,650 unique votes. Simply put, the product garnering the most votes in a particular category was named the winner. Honorable mention products received the second- or third-most votes in the category (two honorable mentions were chosen in the larger categories).

"SecurityInfoWatch congratulates all of the award winners in the first-ever Reader's Choice Awards," said SecurityInfoWatch Editorial Director Steve Lasky. "These products represent the best of the best among new technologies that are helping to secure people and property. We were truly overwhelmed by the number of responses during year one and look forward to seeing even greater participation in the years to come."

Without further ado, here are your Readers' Choice Products for 2022:

CATEGORY: Locks and Door Hardware

2022 SECURITY INFOWATCH.COM® READERS' CHOICE AWARDS ★ TOP PRODUCT ★

Allegion's Schlage NDE and LE Locks with Si option

FEATURED PRODUCT

Schlage NDE and LE mobile-enabled wireless locks with Si option support the secure application area of HID smart and NFC mobile credentials. The interoperable locks are ideal for institutions already using HID iCLASS, iCLASS SE, or Seos credentials that want to extend access control further into their buildings using Schlage wireless locks. This option gives customers the flexibility to choose the solution that fits the needs of their facility and leverages existing credential investments.

SPECTRE nano Reader from STid

2022 SIW SECURITY INFOWATCH.COM READERS' CHOICE AWARDS HONORABLE MENTION

SPECTRE nano is the most compact UHF and Bluetooth® reader on the market for vehicle and driver identification. Nano uses contactless technologies to expedite entry and exit from parking garages, fleet lots, or corporate campuses.

It can recognize either the driver, the vehicle, or both by using UHF windshield tags, a badge, or even the driver's Bluetooth smartphone with integration of the STid Mobile ID® ecosystem. These capabilities allow organizations to differentiate access control for vehicles and drivers with multiple profiles (e.g., visitors, employees, tenants). In addition, SPECTRE nano is housed in a durable, anti-vandal shell that is resistant to shock, heavy precipitation, vibration, dust, and even sea water. Maintenance is minimal, and no batteries are required.

SPECTRE nano offers the highest levels of security, using encryption methods recommended by independent security organizations such as ANSSI and FIPS. In addition, OSDP™ and SSCP® protocols provide secure end-to-end, bi-directional communication. Key storage is certified EAL5+. Encrypted and signed credentials prevent cloning, and managers have the capability to quickly erase security keys.

SPECTRE nano is easy to install, easy to use, and can interface with most existing access controllers. The shell can be customized with any branding. Simplify your security management and keep traffic moving.

Schlage Electronic Locks with HID Credential Support

2022 SIW SECURITY INFOWATCH.COM READERS' CHOICE AWARDS ★ TOP PRODUCT ★

At Schlage, we understand that customers value solutions that are open, interoperable and flexible. We offer three series of electronic locks that allow for expansion of access control deeper into the building while utilizing existing HID® credentials. The Si option on Schlage AD Series, NDE and LE electronic locks provide full support for the secure application area of HID iCLASS®, iCLASS SE®, Seos® and NFC mobile credentials as well as Schlage MIFARE® smart and mobile credentials. This interoperability gives our customers the freedom of choice when it comes to credential technologies.

Locks available with the Si option:

- NDEBSi mobile enabled wireless locks for cylindrical applications
- LEBSi mobile enabled wireless locks for mortise applications
- AD Series with Si or SiK reader for cylindrical, mortise or exit device applications

Electronic locks can be customized with a variety of lever designs, finishes and function to meet the needs of the opening. Schlage electronic locks have been integrated into leading physical access control systems through our PACS alliance program; features and capabilities will vary by provider.

Introducing the SALTO XS4 Original+

The XS4 Original+ is a universally compatible advanced smart locking system delivering next-generation access control technology in a market proven solution.

Featuring a sleek design, the XS4 Original+ is based on the same proven housing and mechanical mechanisms of the XS4 Original. It can integrate all your physical security needs through wireless networked, easy to install, stand-alone locks giving you real-time access control for virtually all the doors in your building.

The XS4 Original+ solution is suitable for a wide range of customer applications. The broad range of different models and functions provide comprehensive electronic access control to virtually any door.

SALTO BLUEnet real-time functionality and SVN-Flex capability are pre-embedded, enabling SALTO stand-alone smart XS4 Original+ locks to update user credentials directly at the door.

It is compatible with the wide array of SALTO platform solutions, including SALTO Space data-on-card, SALTO KS Keys as a Service cloud-based access solution, and SALTO's JustIn Mobile technology for digital keys.
The XS4 Original+ also includes RFID Mifare DESFire, Bluetooth LE, and NFC technology functionality.

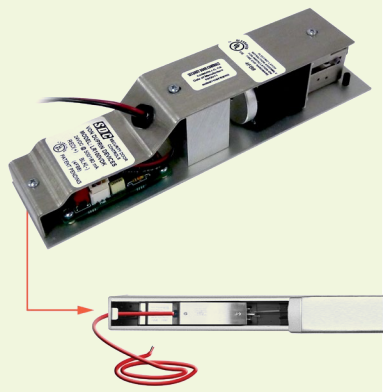
Retrofit Exit Devices from SDC



SDC's Quiet DUO™ LR 100 Electric Latch Retraction Kit enables electric access control and dogging of mechanical exit devices. When energized, the motor retracts the exit device latch and pulls the pushpad on most devices into the dogged (depressed) position, enabling momentary or sustained push and pull operation of the door.

It retrofits most major brands of mechanical exit devices, including: Adams Rite, Arrow, Best, Cal-Royal, Corbin Russwin, Design Hardware, Detex, Dorma, Dor-O-Matic, Falcon, Hager, IDC, K2, Jackson, Marks, Marshall Best, PDQ, PHI, Precision, Sargent, Schlage, SDC, Tell, Town Steel, Von Duprin and Yale. Retrofit exit devices with our proven concealed solution.

- Motorized Electric Latch Retraction & Dogging for Fire Rated & Non-Fire Rated Devices
- Retrofits select exit device brands without removing device from door
- Only Latch head cover and end cover plate removable required for most other brands
- Low 700mA Inrush, 200 mA Continuous @ 24VDC
- Quiet Mechanical and Electric Operation
- Eliminates need for costly replacement of existing exit device
- Significantly less labor and costs compared to competitive retrofit kits
- Eliminates need for costly power supplies with high inrush circuitry
- Compatible with UL Listed Access Control Power Supply
- Only 1 Amp SDC brand power supply required for up to 2 exit devices
- Low current enables longer wire runs with smaller gauge wire
- No door sequencers required for pairs of manual doors

For more information, call 1-800-413-8783 or visit the links below.

MOTOR DRIVEN

Command Access LPM190 Motorized Latch Retraction Mortise Lock

The Command Access LPM190 series motorized latch retraction mortise lock utilizes a high-quality Grade 1 chassis built on the same footprint as the Schlage L9000 series and uses standard 'type 86' door prep. This remarkable modification opens the door to new possibilities on what can be achieved with a mortise lock, previously only possible with exit devices. It uses a CAT-designed custom motor assembly to maximize the pulling force and low surge, allowing long wire runs and a centralized power supply. It is the perfect solution for push-pull conditions, as well as handicap access where panic devices are unnecessary. Another industry first was our ability to add independent lever control for specialty applications like single-occupancy restrooms.

Cyberlock Blue Padlock

The CyberLock Blue padlock is a keyless security solution designed specifically for water, power, telecom and data center industries. The modern padlock design facilitates access control through Bluetooth-enabled devices, fobs or CyberKey smart keys. Users are granted scheduled or temporary access to the padlock via the Cyber Access app, available for Apple iOS and Google Android. The stainless steel and brass padlock is IP68-rated, which gives it the durability to work effectively in remote locations that experience severe environmental conditions.

STid Architect Multi-Technology Readers

STid's flagship Architect® series is the most-awarded range of access control readers. Intuitive and dynamic, the Architect series is made up of three interchangeable modules, three facades, and one arc (for tight spaces) that easily connect to an intelligent RFID core (Bluetooth® optional).

It offers the perfect blend of high security and upgradeability. The OSDP-certified readers use the latest MIFARE® DESFire® EV2 & EV3 contactless chips and public encryption algorithms (3DES, AES, RSA, SHA, and more), which are recommended by official data security agencies. Architect security readers are compatible with all access control cards, including 125 kHz, 13.56 MHz, NFC, and Bluetooth®.

The modular nature of Architect allows you to manage the security of your access points autonomously, reduces the number of parts needed by 40%, and facilitates future technological extensions, upgrades, and migrations.

Architect provides best-in-market data protection due to the patented, anti-tearing motion-sensor system and the ability to delete authentication keys. Data is encrypted with an EAL5+ certified crypto processor.

Unlike competing solutions, the reliability of the accelerometer-based technology prevents it from being outsmarted. The vandal-proof readers are designed to withstand harsh environments and can be personalized with your brand identity.

Kreiger Special Purpose Doors for Military and Government Buildings

Krieger's special purpose doors are custom-manufactured to protect personnel and property while meeting specialized hybrid performance requirements in U.S. military and government buildings.

Blast and Pressure Resistance Doors – Krieger's blast-resistant doors meet UFC 4-010-01: DoD Minimum Antiterrorism Standards for Buildings, Anti-Terrorism Force Protection (ATFP), and industrial PIP standards to protect personnel and property from explosions and explosion-borne projectiles.

Doors with UL 752 Bullet Resistance – Krieger's bullet-resistant doors protect personnel and property from small arms fire by meeting UL 752 Levels 1-10 and N.I.J. Levels I, IIA, II, IIIA, III, and IV. Ballistic standards comply with MIL-SAMIT Parts 1 and 2. All Krieger door assemblies are available in manual or power-operated as needed.

New! Radio Frequency/Acoustical Hybrid Door – Krieger now offers a unique hybrid door with 40 dB radio frequency (RF) protection and an STC 51 acoustical rating—all in a standard 1¾" thick door panel. The thinner design makes it an ideal choice for any new or existing construction where RF and acoustical ratings are required. Krieger has a long history of providing SCIF and RF door combinations for military and government installations, including the Pentagon. SCIF door assemblies are rated up to STC 55 and RF shielding meets TEMPEST and IEEE 299 standards.

MLR Z7600 Motorized Latch Retraction Mortise Locksets from SDC

SDC's MLR Z7600 Series Mortise Locksets are designed for the access control of openings in commercial, industrial and institutional facilities where code compliance, dependable operation and resistance to physical abuse is required. Ideal for automatic door operator applications, they replace most major brand mechanical locks in new or retrofit applications. MLR Mortise Locksets ensure the door stays latched even when unlocked, perfect for use on fire rated doors to maintain code compliance.

FEATURES

- Motorized low current operation 620mA inrush, 160 mA holding force @ 24VDC
- SDC Fully Featured Lockset with Complete Application Flexibility for New Construction or Retrofit of Major Brand Mechanical Locks
- New or Retrofit Application, Replaces Most Mechanical Locks
- Field Selectable Handing
- Order with SDC Trim or Less Trim. Compatible with Schlage Trim Provided by Others
- Key Cylinder Latch Retraction
- Full Monitoring Capability (Optional)
- Request-to-Exit, SPDT
- MC-4 Door Contact
- Latchbolt Status, SPDT

YD30S Pedestrian Door Lock from BQT Solutions

The YD30S from BQT Solutions, also known as the Cobalt Single, is an advanced low-voltage, motor-driven door lock for pedestrian doors. Designed to secure single-acting doors, it resolves the two biggest issues in door locking: the ability to align a misaligned door and the ability to release when requested, even with pre-load load on the door.
The unit seamlessly integrates into access control systems and can be mortice- or surface-mounted, making it ideal for use on glass doors. Made to exacting standards with full monitoring.

School Security Solutions from NAPCO Security Technologies

Napco Security Technologies has been creating proven school security and access control technology solutions for decades, helping protect some of the country's largest K-12 school systems, and the best-known, most prestigious higher-education institutions.

As a security-dedicated manufacturer, we offer a full range of solutions for every application and budget, used alone or integrated campus-wide: From easy-retrofit classroom locks that lock-down with a key from safely inside a room, to advanced PIN/ID electronic access locks that lock-down using remote staff keyfobs or across campus in seconds using a wireless network activated from any one lock, mobile phone or the main server.

NAPCO also offers cloud-/cell-/web-browser-based access systems, or full security management and enterprise solutions, integrating locks, video, alarms, mobile/BT credentials, cell/IP communications, access control, threat-level and visitor management, scalable from a few doors to thousands, spanning multiple buildings or sites.

Napco is an ISO9001:2000 certified manufacturer of quality products engineered to exceed industry standards; to be long lived and feature the lowest total cost of ownership and the industry's longest warranties.

As part of its campus security initiative, Napco is a PASS Partner (Partner Alliance for Safer Schools), offering comprehensive school security guideline trainings, and creator of SAVI™ (School Access-Control Vulnerability Index™) an objective self-audit tool to assess current security and identify vulnerabilities for phased improvement. Motorized Latch Retraction Kits (MLRK1) from Command Access

Instead of going for the one-size-fits-all approach, Command Access worked on designing its Motorized Latch Retraction Kits (MLRK1) to work specifically with a particular manufacturer's exit device to maximize pull force and longevity.

It enables true electronic dogging, meaning the push pad is retracted along with the latch/latches. They are rated for continuous duty and are backed by our no-hassle warranty.

Our motor modules (MMs) are standardized across the line, from the specs to the troubleshooting, making it much easier for installers who work with multiple manufacturers' products. They are equipped with built-in audible diagnostics and push-to-set technology for easy post-installation adjustment of the latch/latches without disassembling the exit device.

Lower in-rush and long wire runs enable the installer to place the locking hardware power supply in a centralized location. Along with electronic dogging, an anti-tampering function notifies if the push pad is pulled from the dogged position.

We have built an extensive library of installation videos that walk you through each kit's installation, capped off with a celebratory dance move. All our kits are blessed by UL as an add-on accessory, meaning any device it is installed into will maintain all their listings. Next time you encounter an exit device that needs an upgrade, think Command Access MLRK1.

Weatherized Latch Retraction Exit Device from Detex

The Detex Advantex Latch Retraction Exit device (ER EX) is now available in a weatherized option. The weatherized latch retraction (ER EX W) exit device is a great option for outdoor access control application where a panic exit device is required.

Perfect for outdoor gates in amusement parks, garden centers, lumber yards, courtyards, and other exterior applications as well as interior applications that get wet, the Advantex Latch Retraction can be configured for single and pairs of doors. Detex also offers gate plates with adjustable strike locators, allowing exit devices to be custom fit to just about any gate application. Detex's Advantex weatherized latch retraction exit device is just the newest addition to the proven list of Detex weatherized door alarms, weatherized exit control locks, weatherized exit devices, weatherized delayed egress and weatherized guard tour products.

For more than a century, Detex has earned the trust of architects and owners who rely on Detex products for the life safety and security of people and property. A USA company, Detex designs, manufactures, markets and ships products from New Braunfels, Texas. Detex Corporation is known internationally for life safety and security door hardware, loss prevention and architectural hardware, integrated door security systems, and guard tour verification.

SDC Auto EntryControl Low Energy Swing Door Operator

SDC's Auto EntryControl™ Low Energy Swing Door Operator features a powerful, 1-Amp+, 24VDC internal power supply for true plug-and-play integration with popular access and egress control system components. It provides hands-free, low-power point of entry door control to help meet all U.S. and Canadian ADA requirements for door installations in retail storefronts, office buildings, campuses and healthcare facilities.

The state-of-the-art microprocessor-based unit is self-tuning and self-learning while offering non-handed operation, full mechanical stops and a variety of interface options for sensors, push-plates, fire alarms and electrified locks.

Now you can integrate a Low Energy Swing Door operator with electric latch retraction exit devices, electric strikes and other electric locking systems without adding an extra power supply.

- Meets ANSI standard for ADA Compliance
- 1-Amp+ Accessory/Lock Power Supply
- Knowing act to activate
- 120v, low energy, Quiet!
- Specify push or pull arm
- Spindle included
- Slotted back-plate for easy mounting
- One button programming
- Auto-senses degree of door swing
- Hard stops adjustable (if needed)
- On-board 24v output & sequencer for mags/strikes
- Auto IR, presence sensor (not activation)
- Easy add power for wireless controls
- Order with SDC brand ADA switches & bollards

Single Door Access Controller from Gallagher

Gallagher's C7000 Single Door Controllers support a distributed access control architecture and combine the localized assurance of a door access decision with the ability to scale in numbers to support the largest enterprise systems. The door controller can use existing structured cabling and network Power over Ethernet (PoE)+ powering and UPS backup, lowering cost on security system installation. The device removes the need for power supplies, batteries, cabinets, and long expensive cable runs. It is designed to simply plug into the ethernet and sit discretely on the wall above the door or in the ceiling space.

DoorKing Model 1620 Lane Barrier System

The DoorKing Model 1620 Lane Barrier System is ideal in applications where a higher degree of vehicle traffic control is desired, but without the expense of deep excavation that is typically required for the installation of bollards, wedges or crash beams.

The 1620 can be surface mounted, making in an ideal choice for installation in multi-level parking garages, apartment communities, gated condominiums, parking lots and toll booths. The lane barrier uses a simple counter-balanced mechanical linkage to the companion 1603-580 operator. This counter-balanced system eliminates the need for hydraulics making the system environmentally friendly.

The system is fast acting, raising the steel barrier in approximately 2.5 seconds. LEDs and a signal light remain red until the steel barrier is in the full down position and the signal arm is in the full up position, at which time the LEDs turn to green for safe passage.

The barrier system consist of heavy-duty steel anchorages mounted on each side of the traffic lane and a steel barrier with a nylon strap rated at 22,000 lbs. holding force imbedded within it.
This Lane Barrier System is not crash rated. It is intended to provide a formidable barrier to help prevent passenger vehicles and light-duty trucks from driving through a controlled traffic lane at speeds up to 20 mph.

FLIR FH-Series ID Multi-Spectral Camera

2022 SIW SECURITY INFOWATCH.COM READERS' CHOICE AWARDS HONORABLE MENTION

The FLIR FH-Series ID combines a full resolution thermal sensor with <30 mK sensitivity and a 4K optical imager into a single camera, enabling critical infrastructure users to get an assessment of threats at the same time as detection. Bringing both sensors under one housing simplifies installation and reduces infrastructure and project expenses, as only one IP address and cable connection are needed, making the FH-Series ID an attractive option for system integrators.

A key pain point for customers deploying perimeter security cameras is false alarms. Unlike motion-based alarms, which are more susceptible to nuisance alerts, the FH-Series ID addresses this challenge by incorporating FLIR Virtual Barrier video analytics that are based on convolutional neural networks (CNN analytics).

AI-driven with built-in Virtual Barrier Analytics, the FH-Series ID accurately detects and classifies human and vehicle threats moving at high or low speeds, minimizing false alarms and daily operations costs. Custom scheduling enables security operators to set intrusion analytics to run on visible streams during the day and thermal streams throughout the night, optimizing coverage for any lighting.

These analytics have been shown to reduce false alarms by 60% in a sample of 100 unique scenarios, including noise motion from shaking trees, animals that trigger as humans or vehicles, rapid changes in the cameras AGC, flat field correction events, as well as a shaking camera.

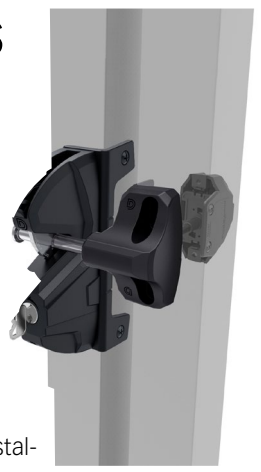
LokkLatch DELUXE Series 3 Gate Latch from D&D



The new LokkLatch® DELUXE Series 3 is a premium privacy and security gate latch with external access that operates and locks from both sides of the gate. The innovative, patent-pending mounting bracket acts as a drill template for simple and quick installation. A revolutionary, snap-fit connector rod provides a quick and secure connection to the external access button for an easy installation. Constructed of industrial-strength polymer and stainless steel components it is durable and will not rust or corrode. Vertically and horizontally adjustable during and after installation for gate movement. Manufactured by D&D Technologies, the world's most trusted gate hardware.

HySecurity StrongSlide Crash-Rated Slide Gate

The StrongSlide M30 Hostile Vehicle Mitigation (HVM) Gate is an all-in-one steel frame, bottom-track cantilever crash-rated gate plus operator and barrier solution that includes streamlined installation and accessible servicing. The lightweight arrestor design keeps weight off the gate to reduce wear and improve reliability and service life. A unified mounting template locates and aligns gate rollers, support posts and arrestor catch bollards for more efficient installation. The gate achieved an M30 P1 rating and has a 24-foot clear opening.

Boon Edam Turnlock Full-Height Turnstiles

BE Secure is an overhead detection system that prevents piggybacking when using Boon Edam Turnlock Full Height Turnstiles. Using Time-of-Flight measurement principles (TOF) combined with artificial intelligence (AI) algorithms, BE Secure enhances the safety and security of any facility that is using full height turnstiles. BE Secure is available in several finishes to complement your new or existing equipment and is available as a factory supplied option or a field retrofit kit for the Turnlock 100 and the Turnlock 150, or as a factory "special request" on new Turnlock 200 models.

Magnasphere MACS-S3H Fence Climb Detection Sensor

Magnasphere's MACS-S3H fence climb detection sensor for rigid, semi-rigid and chain-link fences is housed in a polymer case with fiberglass, creating a compact and stylish design that blends in aesthetically. Its special design enables quick installation with a single central screw and fixing plate on various types of fences. The sensors are pre-wired and completely potted in the factory, guaranteeing IP68 protection and minimal installation times. The special internal design of the sensor casing offers optimal resistance to cable strain, while affording strength and reliability of the system itself. The system is compatible with two sensor buses each, for a maximum of 120 sensors.

MAKE ROOM!

NOW... MORE CHANNELS OF POWER DISTRIBUTION – by ALTRONIX

Introducing **ACMS12(CB)** 12-Output Access Power Controllers with Fire Alarm Interface, and **PDS16(CB)** 16-Output Power Distribution Modules.

These new stackable sub-assemblies further increase access control capacity when integrated with Altronix Trove Series or virtually any wall/rack mount application - reducing overall equipment and installation costs.

Both feature dual inputs providing selectable 12 or 24VDC from any output with bi-color voltage LEDs for visual identification.

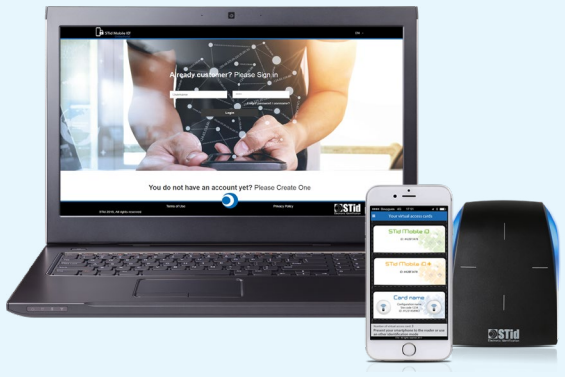
STid Mobile ID Mobile Access Control Solution

STid Mobile ID® enables the issuance of virtual access cards onto users' mobile devices. Secure by design, Mobile ID is built for organizations with the highest of security needs. STid uses public RGS-compliant algorithms to encrypt and authenticate data in the application with unique user keys that are not stored in the application.



STid Mobile ID significantly reduces costs by enabling companies to create, deliver, and revoke virtual cards with just one click. Virtual cards can be customized with any brand identity. The solution can run on a business's private network and integrates with existing systems via API. All protocols are supported, including SSCP®, OSDPTM, TTL Data Clock and Wiegand. Configuring STid Mobile ID is fast and does not require on-site software. No additional programming is required.

One reader can be configured to three different security levels:

- What I have – a badge on a locked smartphone
- What I know – a badge on a smartphone unlocked with a PIN or other code
- Who I am – a badge on a smartphone unlocked with biometrics

Virtual cards can be issued in combination with conventional cards since the majority of card technologies are supported, including MIFARE® Classic, DESFire®, and most proximity cards (125 kHz). The STid Mobile ID app is available in the Apple Store and Google Play Store free of charge and can operate on Apple Watch.

Crescendo C2300 Cards from HID Global

Crescendo C2300 from HID Global provides organizations with seamless and secure employee authentication, ensuring that only authorized people can access sensitive information. Enabling organizations to implement Zero Trust security architecture, it can be used as a corporate badge that protects access to facilities as well as a means to protect access to digital enterprise resources. It is designed to be easy and fast to deploy while adapting to continuously evolving security needs thanks to proven standards such as FIDO2 and PKI, data encryption allows only authorized users to access sensitive information.

Retransfer Card Printer from IDP Americas

The IDP SMART-81 is a new generation Retransfer Card Printer that features innovative retransfer heating technology: Rapid Retransfer Printing (RRP), providing the fastest "Ready to Print" metric. No more waiting for several minutes for a retransfer printer to heat up. RRP technology offers "Power On" and "Ready to Print" in only seconds. The printer produces high-quality, sharp-looking images and meets the requirements of high-security applications such as instant bank card issuance. The input card hopper holds 200 cards, and a physical security locking features allow the user to easily secure the printer, supplies, and ejected cards.

WattBox Power Supplies from Snap One

WattBox is designed to revolutionize the way you think about power solutions. WattBox delivers every form factor you can imagine, featuring a robust lineup of IP and traditional power conditioners, surge protection devices, uninterruptible power supplies, and a suite of accessories to help you complete the job. WattBox is built on a hardware platform of professional-grade surge protection and the OvrC remote management platform. Using OvrC, WattBox allows integrators to remotely reboot devices, modify configurations, and update firmware without rolling a truck. It even notifies you if a WattBox goes offline or its voltage falls outside a safe range. Every job needs power, so every install needs WattBox.

PowerPipe Distribution Cables from Remee Wire

Suitable for indoor and outdoor digital electricity applications such as PoE, LED lighting systems and security cameras, Remee Wire & Cable's new Activate line of PowerPipe copper multipair and hybrid copper/fiber Distribution Cables provide a Class 4 fault-managed power solution for distributed electronics requiring long distance runs. The cables were designed to meet the new NEC Class 4 classification standard for fault-managed power systems. They combine the convenience and safety of low-voltage cables with the power and distance capabilities of traditional AC distribution. It delivers nearly 20 times the power of PoE over hundreds of meters, while using low-voltage pathways and wiring practices.

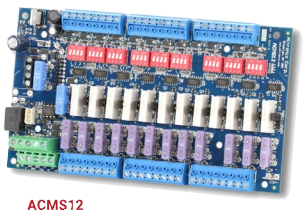
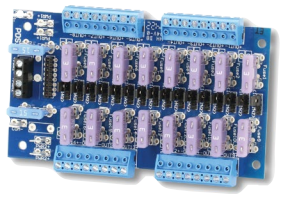
Access Control and Power Distribution Sub-Assemblies from Altronix



ACMS12



PDS16

Altronix ACMS12 Access Power Controllers and PDS16 Power Distribution Modules accommodate exponentially larger systems incorporating more doors and devices with a more compact footprint. The ACMS12 features dual inputs allowing power to be steered from two independent 5 to 24VDC power sources distributed over 12 independently selectable Fail-safe/Fail-secure power outputs. Fire alarm disconnect is selectable by output. The PDS16 also features dual inputs and is designed to steer AC or DC over 16 power outputs. Both models feature bi-color LEDs which indicate the voltage each output is providing and can be ordered with fused or PTC protected outputs. Altronix products are NDAA and TAA compliant and carry a lifetime warranty.

SMARTER SECURITY ANSWERS

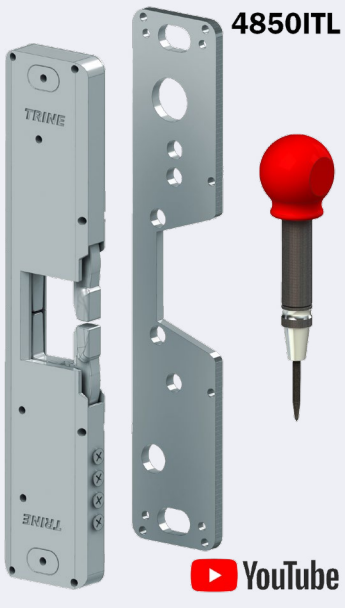
Trine's 4850ITL Electric Strike Installation Tool

Trine Access Technology has developed the ultimate tool for installing electric strikes used with rim panic devices. As with all Axion strikes from Trine, this tool was designed to install the entire 4800 series line of strikes quickly and accurately the first time making the best installation available today.

The 4850ITL is not just a template, it is made from actual production parts, giving the installer the ability to adjust for common door issues such as sagging and misalignment. By placing the ITL on the frame, it allows the installer to "feel" the strike working with the door and panic device allowing for fine adjustments before holes are drilled.

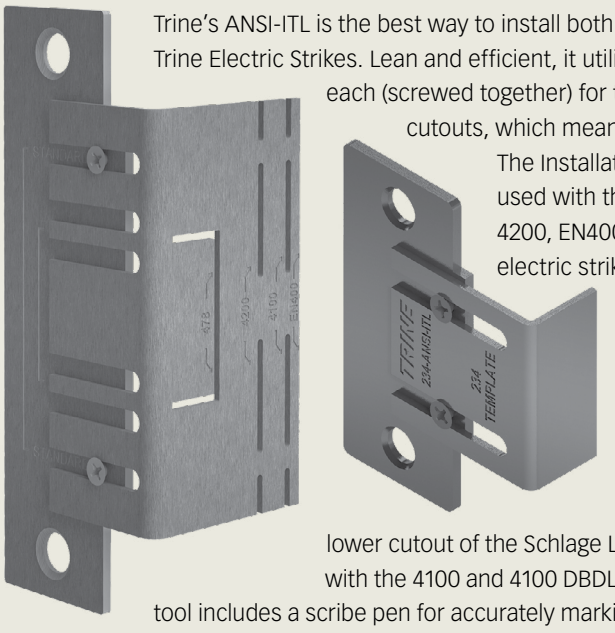
The flexibility and therefore accuracy of the 4850-ITL is derived from our patent pending magnetic holding system built into the body of the tool.

Combine this with a custom center punch that is included with every 4850-ITL used to make perfectly centered marks on the frame, this tool is a must for every installer of electric strikes. See the video by searching "4850ITL" on YouTube!



www.trineonline.com

ANSI-ITL for the Best and Easiest Installation of Trine Electric Strikes



Trine's ANSI-ITL is the best way to install both 4-7/8" and 2-¾" Trine Electric Strikes. Lean and efficient, it utilizes only two pieces each (screwed together) for the 4-7/8" and 2-¾" cutouts, which means fewer lost parts. The Installation tool can be used with the 4100, 4100DBDL, 4200, EN400, EN435, EN430 electric strikes as well as 478, 478X, 234, and 234X installations on the 3000 series.

Adjustments on the installation tool allow for installation even on the lower cutout of the Schlage L series – for use with the 4100 and 4100 DBDL. Additionally, the tool includes a scribe pen for accurately marking the cut-out lines on the frame. Two mounting screws for the tool is also included.

Please note the ANSI-ITL replaces the older 478-ANSI-ITL model number.

The ANSI-ITL is fast, easy, and accurate. Ask your distributor how you can get yours today.

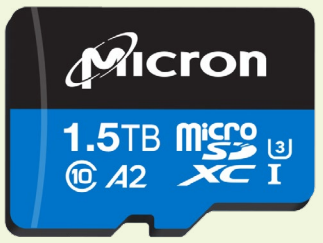
Micron i400 microSD Card

2022 SIW SECURITY INFOWATCH.COM READERS' CHOICE AWARDS ★ TOP PRODUCT ★



Technology innovations like 5G, artificial intelligence (AI) and the Internet of Things (IoT) are driving growth in AI-enabled cameras in video security applications and data storage at the edge.

Micron's microSD card is specifically designed for handling continuous high-quality video recording and multiple AI capture events concurrently.

Adopting edge storage through the microSD card can enhance video security system performance by enabling flexibility and scalability, and by reducing network bandwidth requirements and lowering the total cost of ownership.

Unlike most memory cards on the market that are consumer-grade and have limited write capability, Micron's i400 microSD cards are designed for AI-enhanced video applications with features such as:

- High Endurance (32GB to 1.5TB): Supports up to 5 years of high-quality, continuous, 24/7 video recording and up to 4 months of storage (assumes a bit rate of 1 megabit per second) with the highest-capacity microSD card in the world.
- Outstanding Recording Performance: The optimized design delivers sustained performance for concurrent 4K video recording and up to 8 AI capture events every second.
- Industrial Quality: Reliable high quality provides a 2 million hour mean time to failure (MTTF) rating, plus 5-proof protection encompassing water, shock, x-ray, magnet and impact.
- Smart Management: Health monitoring tracks usage and card health, and the field firmware update provides a secure way for the card to be updated remotely when needed.

Aiphone Mullion Mount IP Video Door Station Helps to Reduce Germs at Entrances

Less than seven inches tall, and at a slim width under two inches, the new IX Series IX-DVM Mullion Mount IP Video Door Station from Aiphone has a small footprint with a BIG IMPACT.

Being UL Listed and TAA Compliant, this feature-rich station opens doors to more job opportunities with its compact form and its various built-in benefits:

- WDR camera avoids sun glare and silhouettes regardless of the mounting angle.
- LED indicator lights meet ADA regulations with clear visual cues.
- Touchless call sensor reduces the spread of germs.
- Card slot for microSD™ simplifies on-board recording.
- Aluminum die cast withstands everyday use at busy entrances.
- Low-light LED provides illumination when conditions are too dark.

Whether installing new IX Series systems, or upgrading existing ones, the DVM will impress customers with its timeless style, expanded capabilities, and its amazing flexibility to be mounted in more compact locations.

IP Speaker Microphone from Louroe Electronics

The DigiFact 830 from Louroe Electronics is a two-way, ceiling-mounted 6.5-inch IP network speaker microphone. It harnesses the value of networked audio monitoring technologies which analyze and stream bi-directional audio. Integrating into the Louroe Microphone Application Platform (LMAP), the wide dynamic range audio device delivers broad frequency response and is sensitive enough to pick up low- and high-frequency audibles. Featuring a robust quad-core microprocessor selected to deliver "judicial" quality audio, the unit is capable of running an analytical application which detects and processes sounds of a threat.

FIRE & LIFE SAFETY

Commercial Fire Alarm Systems from NAPCO

NAPCO Security Technologies is manufacturer of an innovative, growing line of UL/NFPA code-compliant commercial fire alarm systems and devices for every region and AHJ, plus industry-leading fire alarm communications for fire system alarm monitoring and reporting.

Award-winning StarLink Fire Universal cell/IP communicators include new StarLink MAX Fire 5G LTE-M Communicators for maximum speed and next-level coverage on today's latest networks, plus the first models that support FirstNet® First Responders Network communications. StarLink communications technologies are proven to reliably work even where others cannot using patented dual switching antenna technology; and also, to save thousands on buildings' and facilities' budgets, they replace dual dedicated copper landlines that are increasingly scarce, costly and unreliably maintained.

Drawing on this expertise, Napco's award-winning, all-in-one FireLink FACPs feature built-in StarLink cellular and/or cell/IP communications, on-board LCD touchpad annunciator, plus new cloud programming from any smart device. A 32-Zone conventional model comes preloaded with a sprinkler supervisory program. The new FireLink XL 255, designed for larger addressable applications, supports 128 to 255 points and features 7A power supply and dual path cell/IP communications.

NAPCO is an ISO9001:2000 certified manufacturer of quality products engineered to exceed industry standards; to be long lived and feature the lowest total cost of ownership and the industry's longest warranties.

UL-Approved Fire Warning Signals from E2S

E2S Warning Signals has released UL464 and UL1638 approved warning signals for use in fire and gas detection systems suitable for hazardous areas, industrial, marine and harsh environments. The D1xS2H is housed in a Type 4/4X, IP66 marine grade, corrosion proof aluminum enclosure and features sound output levels up to 127 dB(A) and 64 alarm tones, each of the 4 stage/channels can be remotely activated. The AlertAlarm horn sounder range is globally approved for fire, marine and general signaling applications and features 64 alarm tone frequencies and 4 remotely activated stages/channels. It is approved to UL464 and EN54-3.

Wireless Siren with CO Annunciation from DMP

Integrators can provide added protection against the threat of carbon monoxide (CO) for a customer's wireless systems. With a new update, DMP's 1135 Wireless Siren can be programmed to annunciate CO alarms with a distinct Temporal 4 cadence to warn individuals on the premises of the potentially life-threatening situation. Fire alarms typically use Temporal 3 cadence, but in the event that a customer's carbon monoxide detector goes into alarm, the siren alerts occupants with a different annunciation pattern so they can more easily identify the emergency. This update brings the 1135 siren into compliance with changes to ANSI/UL 985 Household Fire Warning System.

RESIDENTIAL & SMART HOME

ClareOne Smart Home Panel from Snap One

Bridge the gap between security and smart home integration with ClareOne. ClareOne is an easy-to-use, all-in-one touchscreen panel that offers a unified experience for security, surveillance, and smart home capabilities. Whether your customers want to add a few smart devices to their system or build a fully connected home, ClareOne makes it simple. If you are interested in differentiating your services with a recurring monthly revenue model, ClareOne provides competitively priced self- or professional security monitoring and free smart home interactive services. For projects that require a hybrid smart home and security solution that won't break the bank, ClareOne will quickly become the most valuable asset in your portfolio.

Alarm.com Smart Thermostat HD

Alarm.com's Smart Thermostat HD is fully integrated into its smart home security system and is Energy Star-Certified. The connected thermostat offers end users next-level comfort and control, plus the ability to monitor the health of the heating and cooling systems to optimize performance and avoid costly repairs. Featuring a sleek form factor and color touchscreen display, it is easy it is to install thanks to an on-display installation wizard, and homebuilders can take advantage of immediate energy savings prior to account setup. Other features include in-app diagnostic alerts, monthly HVAC health reports, motion sensor that wakes display on approach, and humidity and vent control.

Johnson Controls IQ WiFi 6

IQ WiFi 6, a new mesh router solution for homes and businesses from Johnson Controls, is a Wi-Fi Alliance Certified router with Alarm.com management software built-in. When paired with an IQ Panel, it delivers a unified security and Wi-Fi network throughout a site that can be managed and maintained by end-users and service providers through the panel's 7-inch touchscreen, iOS and Android mobile apps, and the Alarm.com website and Partner Portal. It has four network partitions, including a guest network and a network dedicated to the end-user's Wi-Fi devices, both of which automatically switch between 2.4 and 5 GHz to optimize range, speed, and performance.

WiFi Water Leak Shutoff Valve from Resideo

Technology is making homes safer, smarter, and more connected. And that now includes home water leak management. New from Resideo, the Braukmann L5 WiFi Water Leak Shutoff Valve upgrades your customer's system to a smart water solution. The device automatically shuts off the water flow in the event of a leak, protecting them from potentially expensive damage and household disruption. The Resideo App can be set up as a water leak detection control panel with notifications, customized alerts, and preset shutoff locations. The wireless functionality means customers can control their home's water from anywhere.

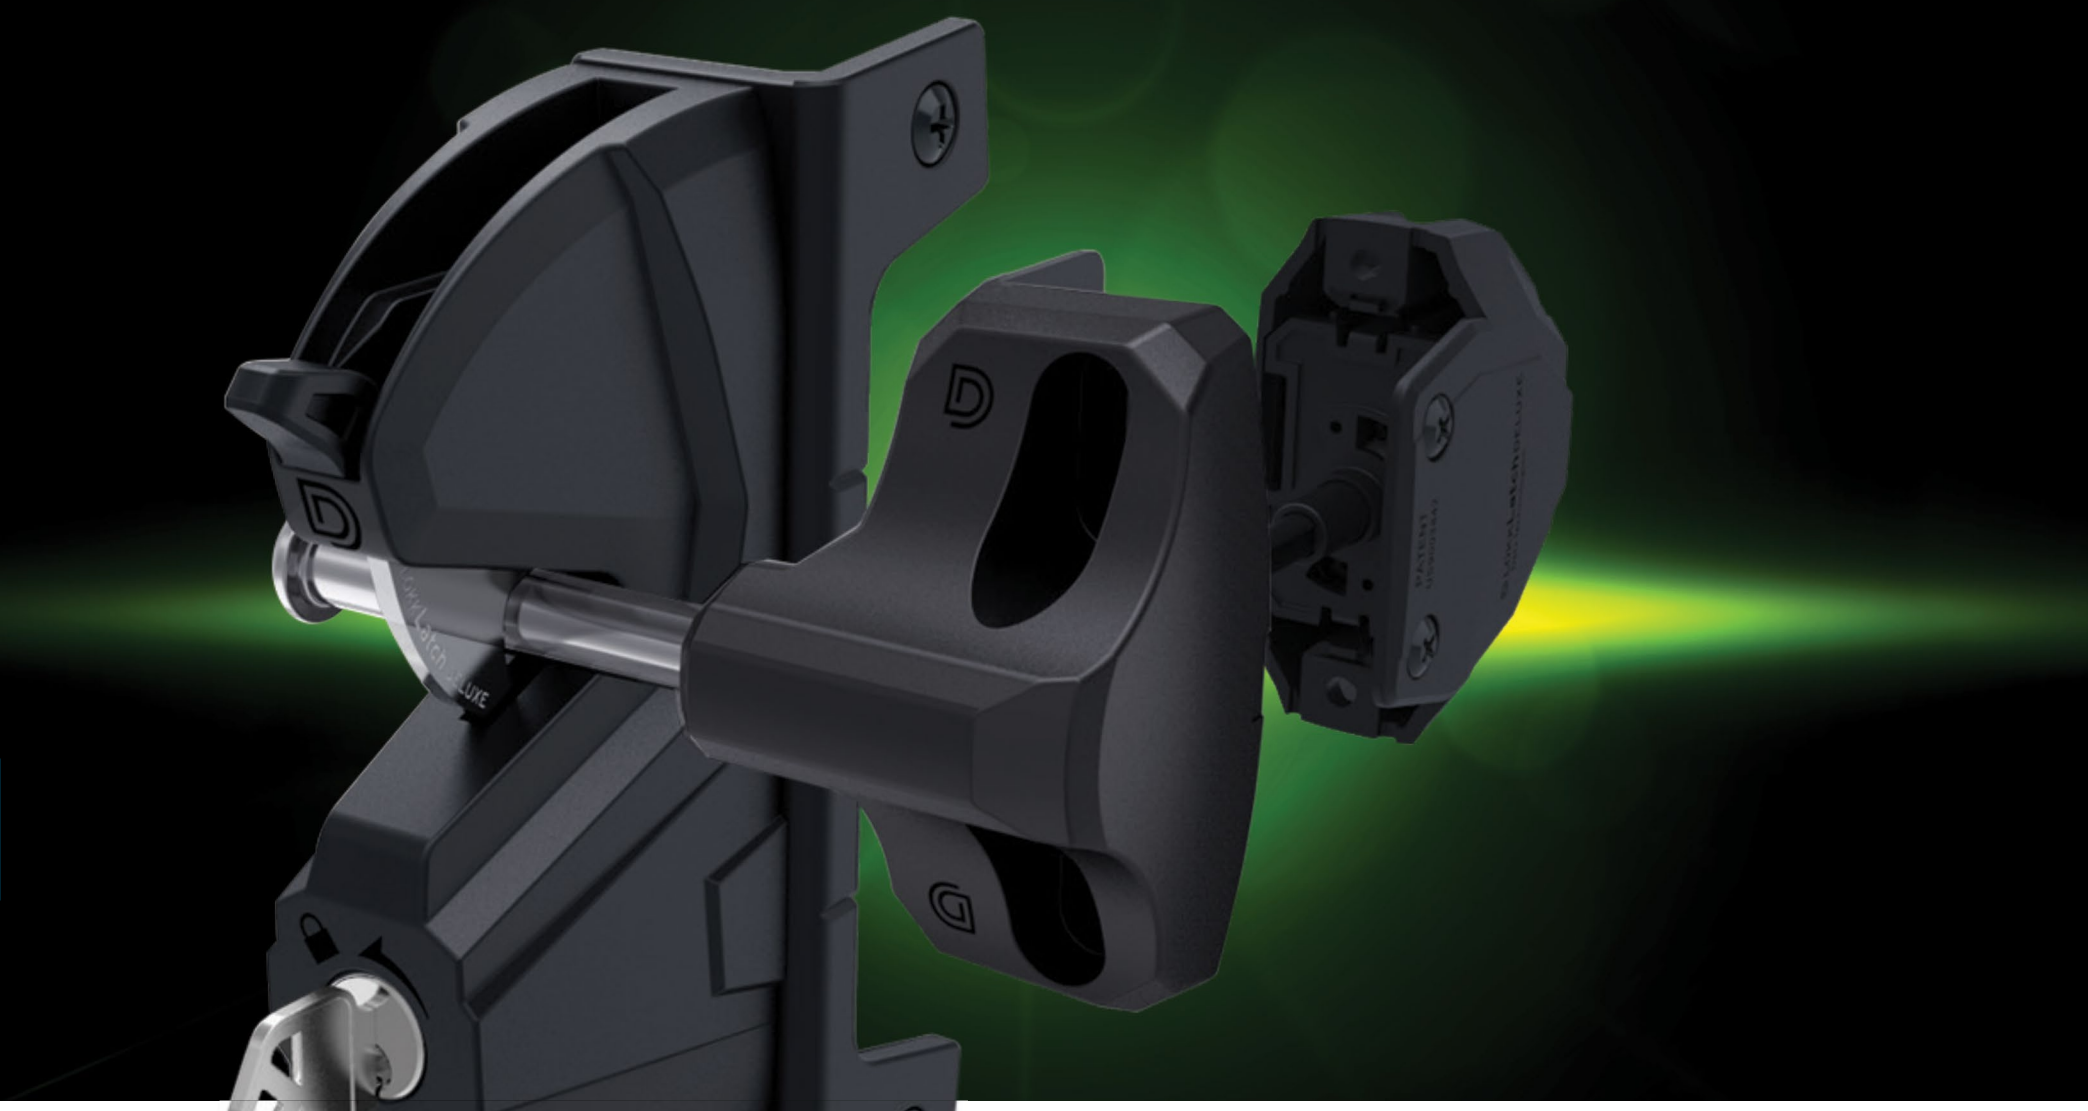
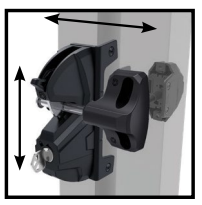
NEW SERIES 3 DESIGN!
Easier to Install
Stronger & More Durable
Stylish & Modern

LOKKLatch® DELUXE³

Premium Privacy and Security Gate Latch with External Access





Vertically & horizontally adjustable during & after installation for gate movement

Patent-pending mounting bracket acts as a drill template for simple & quick installation

Revolutionary, snap-fit connector rod provides a quick and secure connection to the external access button for a simplified installation

Now Available - the best keeps getting better!

Araknis IT Network Ecosystem from Snap One

The best technology integrators make Araknis their go-to network ecosystem choice. Seamless installation is an Araknis mantra, which is why every model and SKU we make is crafted with dealer-inspired features to make your life easier. All our access points, routers, and switches are designed to work together, making for a fast, reliable network that is easy to install and update. All Araknis products are rigorously tested to ensure strength, quality, and reliability. And since every device is cloud controlled, you can view them all in a single, easy-to-use dashboard. If you ever need to update or reconfigure a device, just use your mobile device – no need to roll a truck. From residential installs to high-rise offices, Araknis will make your net work.

Cynalytica SerialGuard ICS Cybersecurity Solution

Designed for Industrial Control Systems (ICS), SerialGuard is a fully passive serial packet sniffer that enables secure visibility within vulnerable legacy networks. Ideal for gas pipeline security operations, the fail-safe sensor monitors Level 0 and Level 1 serial communications between field devices and controllers. Combined with the Cynalytica AnalytICS Engine Platform, it can also reveal and help alert traffic anomalies that are indicative of a cyberattack, physical attack or system misconfiguration. Legacy serial communications make up 30 to 60 percent of all U.S. critical infrastructure. These typically insecure and unmonitored assets have been historically overlooked, leaving gas pipeline and other utility operators with a large monitoring blindspot.

Threat Management Appliances from WatchGuard Technologies

The Firebox M290, M390, M590, and M690 unified threat management appliances from WatchGuard Technologies are affordable yet highly capable firewall solutions for small and midsize businesses, with the processing power to handle encrypted and HTTPS traffic. In addition, new expandable ports and integration with WatchGuard Cloud enable the firewalls to offer the flexibility needed to accommodate changing networking and security needs. Service providers can share configurations across multiple appliances and clients via templates and deploy appliances remotely from the Cloud. A cohesive 30-day view of log data, fast log search and automated reporting greatly increases visibility.

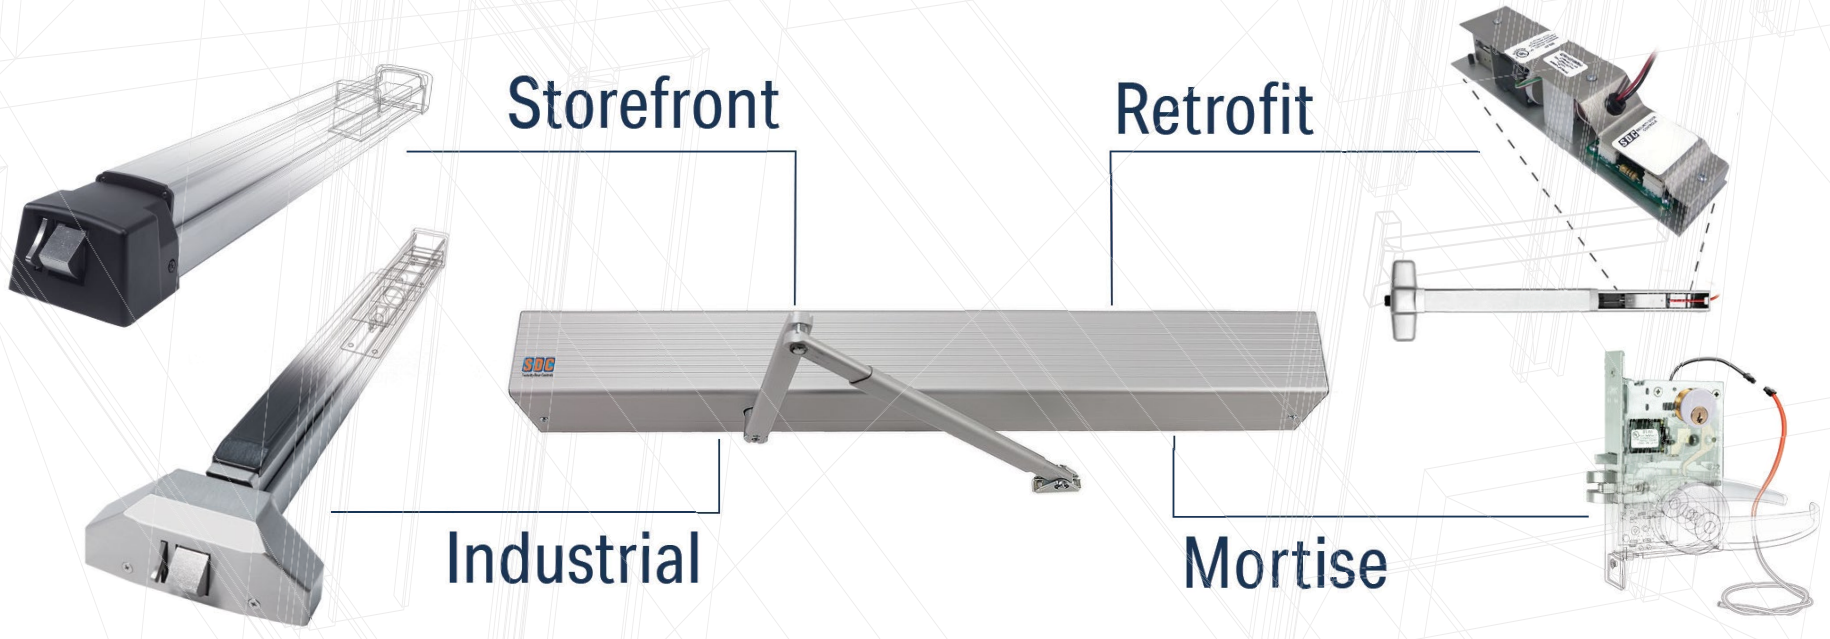
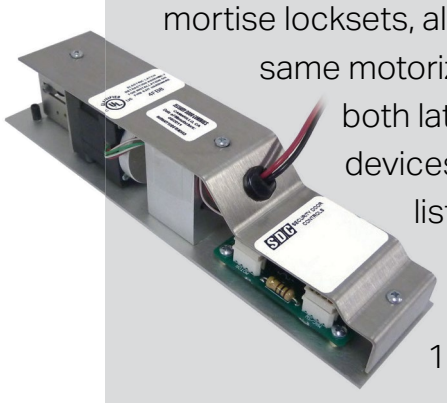
LEADERS IN ELECTRIC LATCH RETRACTION



Electric Latch Retraction (ELR)

Since 2012, when SDC launched **QuietDuo™** – the first Motorized ELR Kits to convert mechanical exit devices – we've been "quietly" leading in **electric latch retraction (ELR) upgrades for access control**. This includes retrofit solutions for most brands of exit devices, as well as innovative SDC exit devices & mortise lock-sets with **factory-installed ELR** and **automatic door operators** with a **built-in 1 Amp+ power supply** to power them. With advancements in electric motor technology, the use of a motor for electric latch retraction provides lower current draw, quieter operation, and greater durability over time vs. solenoids.

Why SDC's Motorized Electric Latch Retraction?



From retrofit ELR field kits, to exit devices and mortise locksets, all SDC ELR products use the same motorized technology to provide both latch retraction and dogging (exit devices). All models are grade 1 and UL listed. Because of their low current draw, SDC ELR products can be powered with the built-in 1 Amp+ power supply that comes standard in SDC's AUTO series low energy operators - eliminating the need for a separate power supply!

SDC's LR100 series retrofit ELR kits not only abolish the need for costly replacements of existing exit devices, but also deliver cost savings on installation of select exit device brands without removing the device from the door. Pushpad depression on select exit device models is also offered.
