

**Alarm.com Booth 411**

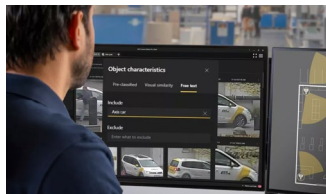

Alarm.com AI Deterrence (AID) combines innovative AI with video analytics to deliver AI-generated verbal responses when its cameras detect people. These responses identify an individual's clothing and location on the property, mimicking live operator responses at a lower cost and with less delay.

**Axis Communications Booth 217**

Axis Communications now features free text search in AXIS Camera Station Pro, a powerful video forensic tool that allows users to search using their own words. This enhances flexibility and accelerates investigations when searching for moving objects in large amounts of recorded video. The Smart Search 2 toolbox now includes both pre-classified objects and free text search capabilities.

**DMP Booth 501**

Digital Monitoring Products (DMP) has added DualSIM capabilities to several of its alarm communication products, which enables one communicator to transmit signals over Verizon and AT&T networks. This functionality is now available in its CellCom, DualCom, and PowerCom Fire

communicators. Dealers can choose to activate one provider or both, eliminating the customary service call needed to change carriers.

**IDIS America Booth 223**

IDIS Smart Privacy Mask is a patented, real-time privacy masking solution that protects individuals' identities while enabling more accurate, reliable, and responsive real-time video surveillance operations. It eliminates challenges such as the inability to detect people and the failure to apply masking and zone settings that can blur entire areas, making it more difficult to distinguish people from objects.

**March Networks Booth 428**

Searchlight Cloud integrates video surveillance with POS, ATM, and IoT data for proactive loss prevention and operational efficiency. It transforms raw data into meaningful insights, empowering smarter, faster decisions. Its interactive dashboards monitor key performance indicators (KPIs) like voids, refunds, and discounts, and creates customizable reports.

### WeSuite Booth 527

WeSuite has integrated its sales proposal software with the System Surveyor site survey and design solution. This integration enables WeSuite users to link one or multiple System Surveyor surveys directly to estimates within the WeSuite platform. The partnership enhances proposal documents by automatically incorporating layouts into specified proposal pages, ensuring consistent, professional presentations that showcase system designs with precision.
