MVP Cloud Unified Access Ecosystem Integrating Napco Software & Hardware

NAPCO's MVP Cloud Platform gives security dealers and locksmiths the power of a true all-in-one access solution.

Available in on-premises, hybrid, or mobile-first app-only versions, it connects every element of access control into one seamless, easy-to-manage ecosystem. From MVP-Ready Access Panels covering 1-16 doors to Trilogy Networx Electronic Locks and Marks Wireless Deadbolt Series, every product is natively integrated, engineered to install faster, configure easier, and deliver a consistent, professional-grade experience.

With MVP Cloud, system management, credential updates, and service expansion are just a tap away – whether from a phone, tablet, or desktop.

Users can mix Bluetooth, mobile, or MIFARE high-security credentials effortlessly while dealers gain new subscription-based RMR opportunities per door.

MVP Cloud delivers the intuitive simplicity today's customers expect with the profitability, flexibility and reliability professionals demand – a complete access control platform from curb to cloud.

For more information, visit the links below, contact your Alarm Lock, Continental, or Marks USA representative, or call 1.800.645.9445.

B150: Dual Voltage with Intelligence from LifeSafety Power

Turn single-voltage power systems into dual-voltage with remote management with LifeSafety Power's B150 Intelligent Step-Down Converter. Its intelligent design, remote management capabilities, and features make it a dependable choice for integrators seeking a flexible and efficient power conversion solution.

The B150 offers two output configurations: a fixed 12VDC output and a field-adjustable output ranging from 3 to 18VDC, both capable of delivering up to 6 amps of current. The LED display visually reports output voltage, current, and input power without additional tools. When installed with NetLink, power output and information on the LED display can also be remotely monitored, managed, and controlled.

2025 SIW SECURITY INFOWATCH.COM READERS' CHOICE AWARDS ★ TOP PRODUCT ★

Advanced protection features such as overcurrent, overvoltage, and thermal shutdown safeguards enhance system reliability and prevent potential damage to both the converter and connected components. The B150's compact design and cost-effective power conversion make it suitable for integration into space-constrained environments that require dual voltage systems. This Intelligent Step-Down Converter is uniquely equipped to support card readers, access control panels, video intercoms, CCTV cameras, IT modems/routers, low-voltage lighting, USB-powered equipment, and other electronics in commercial sectors.

Acoem ATD-300 Gun Detection Sensor

Acoem's ATD (Acoustic Threat Detection) System, recognized with an Honorable Mention in the Readers' Choice Awards, is redefining physical security by making advanced gunshot detection an affordable, practical addition to any security portfolio.

This single-sensor solution provides immediate, precise location alerts and instantly slews PTZ cameras toward the threat. This gives security teams real-time visual confirmation as a situation unfolds, boosting first responder situational awareness and capturing critical evidence.

2025 SIW SECURITY INFOWATCH.COM READERS' CHOICE AWARDS HONORABLE MENTION

Edge processing allows ATD sensors to be deployed anywhere, from fixed perimeters to temporary coverage zones on mobile trailers, and eliminates the need for remote servers or multi-sensor triangulation complexity. A single sensor covers a massive 500-foot radius – equal to 10 football fields – dramatically reducing deployment cost and complexity.

The technical foundation is Acoem's powerful edge-based AI neural network engineered to reject false positives like fireworks, car backfires, or construction noise.

The Acoem ATD-300 sensor just received its most advanced neural net update yet. Built on one of the world's largest acoustic libraries, the ATD AI engine is continually updated by Acoem's engineering team to ensure unmatched accuracy in complex environments. Acoem ATD answers security demands for both greater accuracy and greater deployment flexibility. Learn more and schedule a demo today!

Camden's Universal RIM Strikes with Preload

Camden has introduced a new ½-inch version of its award-winning surface mount RIM strike with preload.

The new CX-EPD1299L Universal series RIM strike doesn't compromise on performance and will operate where other strikes fail. The patented low-profile design enables it to operate with up to 15lbs of preload pressure, preventing the most common cause of strike failure caused by differences in air pressure common in stairwell doors.

Camden's 1299L series strikes also include 1/8" and ¼" spacer plates to accommodate up to ¾" latch projections.

Also available is the sleek CX-EPD1289L Universal series that delivers unsurpassed application flexibility and includes UL security and Grade 1 fire rating. Installation is quick and easy, as a convenient metal mounting jig is also included.

Both strikes feature field configured latch monitoring, selectable fail-safe, fail-secure operation, non-handed left or right, and dual voltage, so there's no need to stock a range of RIM strike models. Both are available in heavy-duty stainless-steel or sleek black finish and are backed by Camden's exclusive no-hassle five-year warranty.

For more information please visit the links below.

Intrusion and Life Safety Wireless Solutions
are designed with one specific purpose in mind –
to help ensure that your intrusion and life safety systems are always connected when you need them most.

That's why our ecosystem of wireless products continues to set new benchmarks in extended range, signal integrity, and virtually interference-free transmission.

And why Inovonics wireless systems are currently protecting many of the world's most prominent and sensitive venues.

It's the proven wireless performance and reliability
you can trust to keep your systems connected.
Only from Inovonics.

inovonics.com

The SecurityInfoWatch Readers' Choice Awards program recognizes the most impactful products introduced in the physical security industry over the past year (April 2024 through June 2025) in 20 different product categories. The program is the most democratic product awards program in the industry – judged and decided by the very people who use and install these products every day. Voting was open to any SecurityInfoWatch reader (one vote per IP address) during August and September. In all, nearly 2,300 security professionals participated in the voting.

Once the vendor submission period ended, voting was opened. Simply put, the product garnering the most votes in a particular category was named the winner. Honorable mention products received the next-most votes in a category (multiple honorable mentions were chosen in the larger or closely contested categories).

Here are the winning Readers' Choice Products of 2025:

CATEGORY: Access Control Hardware

BioEntry W3 from Suprema

BioEntry W3 is an innovative facial authentication access control device powered by Suprema's advanced AI technology. Its AI processor, optimized with deep learning (NPU), ensures high accuracy and lightning-fast facial processing speeds. Designed to withstand external impacts and extreme conditions in a slim and compact profile, its template on Mobile (ToM) enables mobile access.

CATEGORY: Alarm Systems

JamAlert from DMP

JamAlert by DMP detects cellular signal jamming, a growing problem, particularly for high-end retail businesses and financial institutions. Cellular jammers are used to defeat alarm system communications, disrupting cellular alarm signal transmission. Universally compatible with DMP and non-DMP panels, it addresses a critical security gap and offers a unique, easy-to-sell upgrade across a wide customer base.

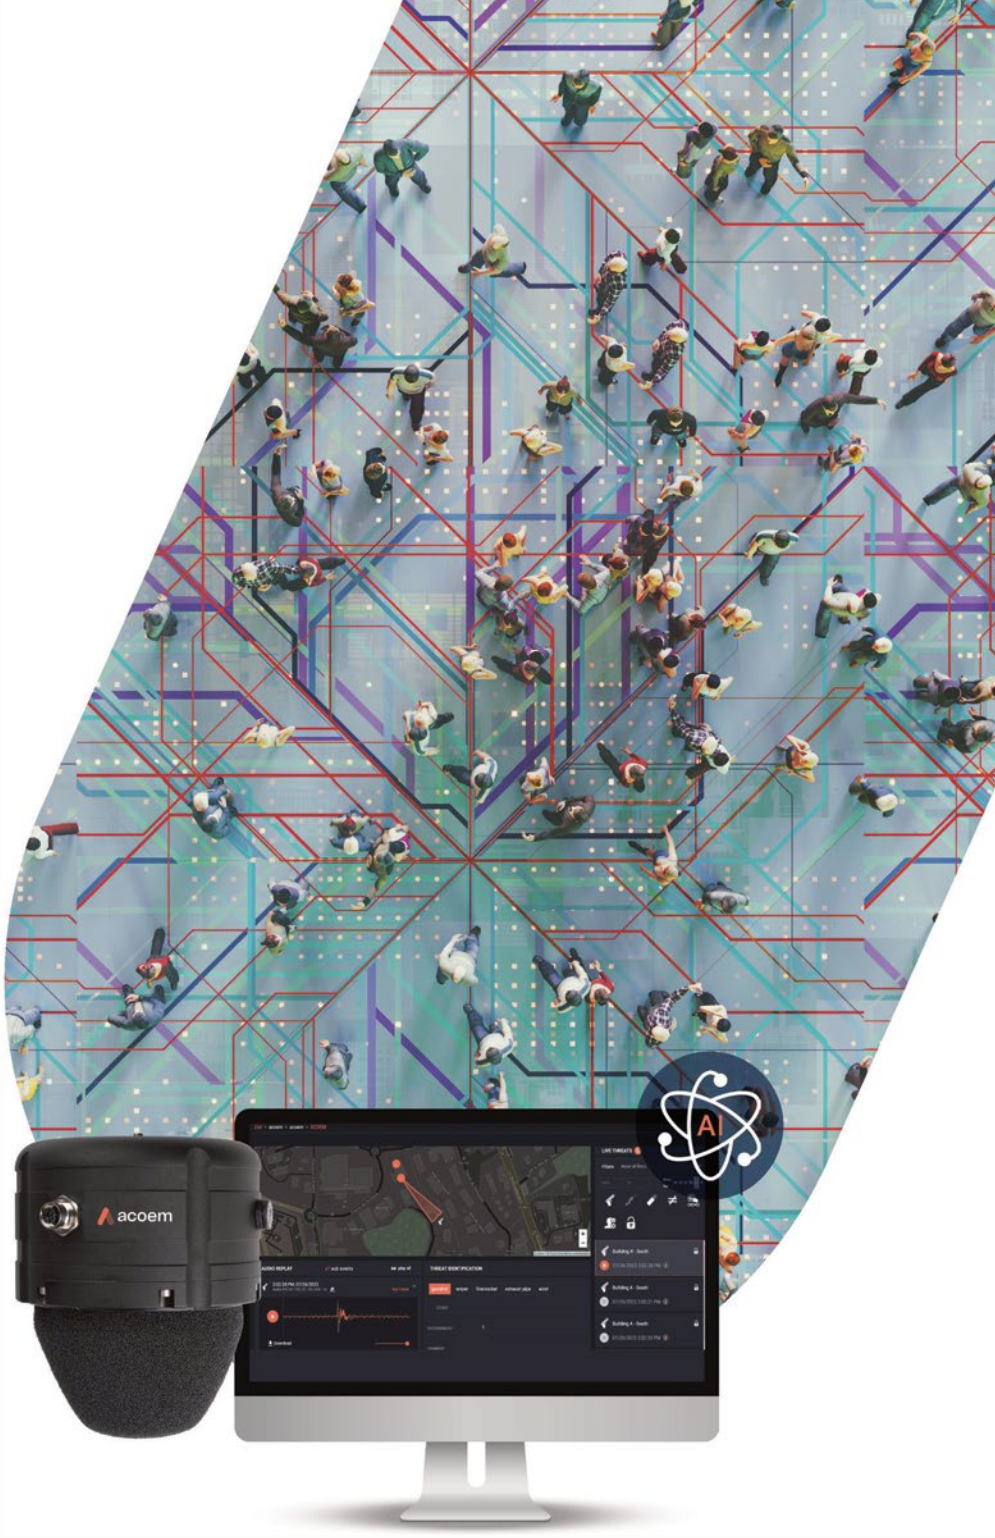
acoem
CREATING ENVIRONMENTS OF POSSIBILITY

Modern gunshot detection; a security essential.

Acoem's ATD (Acoustic Threat Detection) system is key to implementing a modern, layered physical security strategy with immediate threat confirmation.

The single-sensor, edge-based design provides **immediate location alerts** and instantly slews PTZ cameras for **real-time visual confirmation.**

Edge processing e**nables decentralized intelligence and flexible deployment** across all environments. A single sensor covers a 500-foot radius (10+ football fields), reducing deployment cost and complexity.



Instant Visual Confirmation
Automated slewing of PTZ cameras upon alert for immediate visual data, boosting first responder situational awareness.

Decentralized Intelligence
Edge processing eliminates the need for multi-sensor triangulation, servers or complex infrastructure.

Widespread Coverage
One sensor covers a 500-foot radius (10+ football fields), minimizing hardware and deployment costs.

Flexible Deployment
Portable, Edge processing and scalability allows us to deploy on portable trailers, or temporary applications to ensure coverage, when and where you need it.

FEATURED PRODUCT

Acoem ATD-300 Gun Detection Sensor

Acoem's ATD Gunshot Detection system is powered by edge-based AI and built on decades of battlefield-proven acoustic intelligence to detect and locate gunfire in under three seconds with no triangulation or server processing. Integrating with a range of VMS, the system instantly slews PTZ cameras to the threat for real-time visual confirmation.

SAFETY & SECURITY FOR HAZARDOUS LOCATIONS

Electromagnetic Locks and Components for Spark Prevention

Eliminate Spark and Arc Explosions

SDC's Explosion Proof Collection is a series of **door access & egress components** all specially designed and explosion proof rated to **National Fire Protection Association (NFPA)** standards. Additionally, these **Explosion Proof Collection** products also meet the temperature requirements of the specific application in which they are to be installed, per **National Electric Code (NEC®)** standards.

They provide **safety, security and risk management** in potentially hazardous location plants and facilities for the following industries:

- Agriculture
- Beverage
- Chemical
- Energy & Utilities
- Food Processing
- Manufacturing
- Mining
- Nuclear Power
- Oil & Gas Refining
- Pharmaceutical
- Printing

DESIGNED, ENGINEERED SINCE 1972 BUILT IN AMERICA

MVP Cloud Unified Access Ecosystem Integrating Napco Software & Hardware

NAPCO's MVP Cloud Platform gives security dealers and locksmiths the power of a true all-in-one access solution.

Available in on-premises, hybrid, or mobile-first app-only versions, it connects every element of access control into one seamless, easy-to-manage ecosystem. From MVP-Ready Access Panels covering 1-16 doors to Trilogy Networx Electronic Locks and Marks Wireless Deadbolt Series, every product is natively integrated, engineered to install faster, configure easier, and deliver a consistent, professional-grade experience.

With MVP Cloud, system management, credential updates, and service expansion are just a tap away – whether from a phone, tablet, or desktop.

Users can mix Bluetooth, mobile, or MIFARE high-security credentials effortlessly while dealers gain new subscription-based RMR opportunities per door.

MVP Cloud delivers the intuitive simplicity today's customers expect with the profitability, flexibility and reliability professionals demand – a complete access control platform from curb to cloud.

For more information, visit the links below, contact your Alarm Lock, Continental, or Marks USA representative, or call 1.800.645.9445.

IN100 Series Wireless Locks with Keypad from SARGENT and Corbin Russwin

The IN100 Series real-time wireless locks with Aperio technology from ASSA ABLOY brands SARGENT and Corbin Russwin deliver a flexible, reliable solution for extending access control deeper into any facility. Utilizing local wireless communication between each lock and a hub, it leverages existing access control and IT infrastructure to eliminate the cost and disruption of wiring at the door – providing a streamlined path to comprehensive security vs. traditional wired access control systems.

2025 SIW SECURITY INFOWATCH.COM READERS' CHOICE AWARDS HONORABLE MENTION

With real-time communication and remote control capabilities, openings can be locked or unlocked in under 10 seconds. A built-in privacy button enables local lockdowns, while HID OMNIKEY SE technology supports multiple credential types – including mobile. A keypad option allows for multi-factor authentication using PIN codes for added protection.

Corbin Russwin ASSA ABLOY

SARGENT ASSA ABLOY

The IN100 features Smart Credential Cache technology, allowing previously authorized credentials to maintain access during network outages. Designed for durability and versatility, the locks integrate with ANSI/BHMA Grade 1 mechanical hardware and are available in cylindrical lock, mortise lock, multi-point lock, and exit device configurations – combining strength and reliability with modern convenience.

BioEntry W3 Facial Authentication Device from Suprema

Suprema's BioEntry W3 is an innovative facial authentication access control device powered by Suprema's advanced AI technology. Its slim mullion-style form factor delivers strong authentication performance and durability for both indoor and outdoor use.

Its deep learning-optimized Neural Processing Unit (NPU) enables fast, accurate face matching in approximately 0.2 seconds at the edge, reducing latency and removing dependence on network connectivity.

The device is engineered for challenging environments, offering IK08 impact resistance to withstand physical force and IP67 protection against water and dust. This combination of rugged construction and edge processing makes the BioEntry W3 well-suited for high-traffic, high-security locations.

2025 SIW SECURITY INFOWATCH.COM READERS' CHOICE AWARDS ★ TOP PRODUCT ★

BioEntry W3 addresses data privacy concerns in biometric devices with its innovative security feature. Template on Mobile (ToM) lets users authenticate access through their mobile devices, ensuring that facial templates are never stored on any external systems.

The device holds key certifications, including ISO/IEC 27001, ISO/IEC 27701, which confirm its top-tier data protection.

2112 eVolve Video Telephone Entry System from DoorKing

The 2112 eVolve is DoorKing's most advanced and versatile residential video entry system, allowing users to program and control their system from virtually anywhere.

The 2112 control dashboard is browser-based, so all that's needed is an internet connection and a laptop, tablet, or smartphone to access the system settings.

With the DKS 2112 resident app (required for video calling), the system can be controlled right from a smartphone, enabling users to grant entry to guests even from thousands of miles away.

The 2112 features broadcast calling, which allows up to four phones to ring simultaneously when the call button is pushed. The 2112 can control up to three entry points and operates with either an internet (VoIP) or cellular connection.

Camden's Universal RIM Strikes with Preload

Camden has introduced a new ½-inch version of its award-winning surface mount RIM strike with preload.

The new CX-EPD1299L Universal series RIM strike doesn't compromise on performance and will operate where other strikes fail. The patented low-profile design enables it to operate with up to 15lbs of preload pressure, preventing the most common cause of strike failure caused by differences in air pressure common in stairwell doors.

Camden's 1299L series strikes also include 1/8" and ¼" spacer plates to accommodate up to ¾" latch projections.

Also available is the sleek CX-EPD1289L Universal series that delivers application flexibility and includes UL security and Grade 1 fire rating. Installation is quick and easy, as a convenient metal mounting jig is also included.

Both strikes feature field configured latch monitoring, selectable fail-safe, fail-secure operation, non-handed left or right, and dual voltage, so there's no need to stock a range of RIM strike models. Both are available in heavy-duty stainless-steel or sleek black finish and are backed by Camden's exclusive no-hassle five-year warranty.

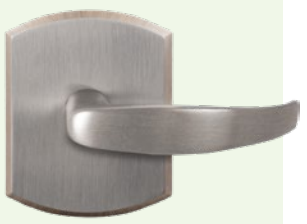
Marks USA Wireless Deadbolt Series: Ideal for Multifamily Access Control

The Marks Wireless Deadbolt Series combines the strength of a traditional deadbolt with advanced electronic access technology for today's multifamily, student housing, and mixed-use properties.

Designed for quick installation and code compliance, these locks provide both the durability property owners expect and the convenience residents demand.

Available as standalone or networked interconnected models, the series offers flexibility for any application. Systems can be managed through the mobile-friendly MVP EZ App or integrated with the MVP Access Cloud for centralized administration across multiple sites.



Installation is simple, requiring minimal door prep, making it ideal for new construction or retrofit projects.

Property managers can select from Bluetooth, mobile, proximity, or MIFARE high-security credentials to meet the desired balance of security and convenience. With a wide selection of hundreds of Marks architectural trims, finishes, and lever styles, the Marks Wireless Deadbolt Series delivers professional-grade protection and an enhanced user experience while providing locksmiths and dealers with an efficient, profitable solution for this fast-growing market.

POWER SUPPLIES

B150: Dual Voltage with Intelligence from LifeSafety Power

2025 SIW SECURITY INFOWATCH.COM READERS' CHOICE AWARDS ★ TOP PRODUCT ★

Turn single-voltage power systems into dual-voltage with remote management with LifeSafety Power's B150 Intelligent Step-Down Converter. Its intelligent design, remote management capabilities, and features make it a dependable choice for integrators seeking a flexible and efficient power conversion solution.

The B150 offers two output configurations: a fixed 12VDC output and a field-adjustable output ranging from 3 to 18VDC, both capable of delivering up to 6 amps of current. The LED display visually reports output voltage, current, and input power without additional tools. When installed with NetLink, power output and information on the LED display can also be remotely monitored, managed, and controlled.

Advanced protection features such as overcurrent, overvoltage, and thermal shutdown safeguards enhance system reliability and prevent potential damage to both the converter and connected components. The B150's compact design and cost-effective power conversion make it suitable for integration into space-constrained environments that require dual voltage systems. This Intelligent Step-Down Converter is uniquely equipped to support card readers, access control panels, video intercoms, CCTV cameras, IT modems/routers, low-voltage lighting, USB-powered equipment, and other electronics in commercial sectors.

Wolflok Key Lock Boxes

Wolflok key lock boxes deliver maximum security key storage and access control for professionals who demand absolute reliability.

Built with a patented multi-push keypad, each digit can be used up to four times in a code, allowing 9.7 million possible code combinations.

Independently tested and security-certified, Wolflok is engineered for real-world threats. It is designed to resist both brute-force and stealth attacks, with a patented anti-picking mechanism and enhanced features such as anti-saw nitride pins, coned anti-drill hinge pins, and heavy-duty zinc alloy construction. The result: robust, long-lasting, and reliable defense unlike anything else on the market.

Wolflok offers a seamless, secure way to manage property access - whether for real estate teams, facility managers, service providers, or homeowners. With Wolflok, sharing keys becomes effortless, access stays protected, and operations run smoothly.

Why choose anything less? Your customers deserve a Wolflok.

THREAT DETECTION

Acoem ATD-300 Gun Detection Sensor

Acoem's ATD (Acoustic Threat Detection) System, recognized with an Honorable Mention in the Readers' Choice Awards, is redefining physical security by making advanced gunshot detection an affordable, practical addition to any security portfolio.

This single-sensor solution provides immediate, precise location alerts and instantly slews PTZ cameras toward the threat. This gives security teams real-time visual confirmation as a situation unfolds, boosting situational awareness and capturing critical evidence.

2025 SIW SECURITY INFOWATCH.COM READERS' CHOICE AWARDS HONORABLE MENTION

Edge processing allows ATD sensors to be deployed anywhere, from fixed perimeters to temporary coverage zones on mobile trailers, and eliminates the need for remote servers or multi-sensor triangulation complexity. A single sensor covers a massive 500-foot radius – equal to 10 football fields – dramatically reducing deployment cost and complexity.

The technical foundation is Acoem's powerful edge-based AI neural network engineered to reject false positives like fireworks, car backfires, or construction noise. The Acoem ATD-300 sensor just received its most advanced neural net update yet. Built on one of the world's largest acoustic libraries, the ATD AI engine is continually updated by Acoem's engineering team to ensure unmatched accuracy in complex environments. Acoem ATD answers security demands for both greater accuracy and greater deployment flexibility. Learn more and schedule a demo today!

MailSecur MS400 T-ray Screening System from RaySecur

RaySecur's MailSecur MS400 T-ray security screening system is designed to combat the evolving threats posed by smaller, dangerous, and difficult-to-detect substances being sent through physical mail to government agencies, corporations, and high-profile individuals. The unit is a commercial terahertz (T-ray) security imaging system operating at 400 GHz, offering real-time 3-D video imaging with even higher resolution to detect the smallest threats, such as white powders, liquids, and chemically-laced papers that are sealed inside mail and often evade conventional detection. The system is sustainable and safe as it does not generate harmful radiation like X-ray machines.

ShotPoint Gunshot Detection System from Databuoy

Databuoy's ShotPoint gunfire detection and localization system senses gunfire, isolates the source, and instantly transmits shooter location alerts. Through the proprietary "Know When It Counts" application, shot locations are displayed onto maps and also floor plans with pinpoint accuracy. Each shot report can be annotated with imagery and video from nearby cameras. ShotPoint can also instantly transmit reports to inform responders and warn the public. Capable of tracing rifle shots to their source, it can locate an elevated shooter, even if rifle shots come from outside the local coverage area, by tracing the bullet path.

COMMUNICATIONS

Salto XS4 Com iGO Smart Door Intercom

The Salto XS4 Com is an innovative cloud-based door intercom solution that transforms building access and communication by integrating video intercom capabilities with advanced access control technology. This hardware-free solution leverages the user's own smartphone in combination with QR code and NFC technology to provide secure, convenient visitor access without complex installations or wiring. Key features include:

2025 SIW SECURITY INFOWATCH.COM READERS' CHOICE AWARDS HONORABLE MENTION

- Hassle-free installation and minimal setup and no complex wiring
- Real-time video/audio communication for visitors, tenants, or building staff
- Remote door unlocking capabilities from anywhere via smartphone
- Integration with Salto's access control platforms (Space, KS and Homelok)
- Geofencing technology for enhanced security

The XS4 Com iGO product line includes polycarbonate plates and stickers with QR code and NFC functionality. The system allows visitors to simply scan a QR code or tap their phone on the NFC plate to initiate an access request call, then tenants can verify visitors via secure video calls and grant access remotely through the XS4 Com app. Designed for versatility, XS4 Com is suitable for commercial buildings, multi-family, healthcare facilities, educational institutions, hospitality venues, and workspaces, enhancing security and streamlining access management across various environments.

Viking Electronics VoIP Emergency Phone Panic Button

The Viking PB-3-IP is a VoIP Emergency Phone Panic Button designed for discreet installation under a desk or countertop, providing a fast, reliable way to silently call for assistance. When activated, the called party can silently monitor the situation or press "#" to initiate two-way hands-free communication. Functioning as a SIP endpoint, the PB-3-IP connects with a single CAT 5/6 cable from a PoE switch and is easily programmed via PC on the same LAN or remotely using a static IP. The unit can dial up to five emergency numbers, deliver a digital voice message or DTMF location code, and features a bright red LED indicator that illuminates when an emergency call is active - delivering fast, reliable communication when it matters most.

Talkaphone Emergency Phone + Autonomous Drone Integration

The Talkaphone Emergency Phone + Autonomous Drone Integration merges Blue Light Emergency Phones with Sunflower Lab's Beehive autonomous drone-in-a-box system. This integration creates a powerful, scalable platform that redefines situational awareness, emergency response, and deterrence, without the need for major infrastructure overhauls. When a user presses the emergency button on a Talkaphone Blue Light Phone, a fully autonomous "Bee" drone is immediately deployed from the "Hive" base station. Within five seconds, the drone begins streaming live video to security personnel, offering rapid situational awareness while also reassuring the caller. The Blue Light Phone continues to serve as a reliable, hands-free communication point.

Cozaint ALICE1 Video Storage System

Cozaint's ALICE1 is a self-contained video surveillance recording and storage system that provides businesses with decades of secure, affordable video retention. By leveraging Linear Tape Open (LTO) technology with a cloud-based search platform, ALICE1 makes it possible for organizations to store unlimited video footage at a fraction of the cost of traditional hard-drive solutions. Each LTO8 tape costs under $70 and can record petabytes of video, lasting up to 30 years. Businesses can record at the highest resolution and at full frame rate continuously without any additional compression. It enables multi-location businesses to record video locally, send tapes securely to a central archive, and quickly retrieve footage.

IDIS Edge AI Plus Cameras

The new IDIS Edge AI Plus camera range is powered by the upgraded IDLA Pro analytics engine, boosting the cameras' efficiency with powerful functions such as crowd detection, abandoned/ removed object alerts, and fall detection. An innovative A-Cut feature speeds investigations by automatically cropping images and enabling intuitive attribute searches. Identify gender, age, eyewear, hats, masks, or carried bags with precision, and classify vehicle types and colors instantly. Built for reliability in any environment, Edge AI Plus empowers security teams to cut false alarms, accelerate response, and achieve next-level surveillance intelligence effortlessly.

Verkada History Player Search

With a single click, Verkada's History Player Search uses advanced computer vision analytics to generate a chronological playback of an individual or vehicle's movement across all cameras, making it easy to find key moments, jump to events, and share clips as part of a comprehensive Incident Report. Built on Verkada's cloud-based Command platform, History Player Search joins a suite of advanced tools, including face search, attribute search, and AI-powered search, to help teams find footage faster and act sooner. Whether securing a school, corporate campus, or retail store, teams can now conduct complex investigations in minutes.

Vaidio 9.1 AI Video Platform

Vaidio 9.1 gives enterprises AI-driven insights from visual data to boost safety, security, and operational efficiency. With enhanced natural language video search, powered by next-generation language models, users can now ask complex questions in plain English. With real-time capacity estimation and preview capabilities, the system's auto-configuration enhancements ensure optimized deployments without exceeding resource limits. It can also track vehicles as they move between cameras without losing continuity. Built for smart cities and transit systems, this feature boosts situational awareness and strengthens public safety operations. Other new features include a redesigned interface, expanded external integrations, advanced dwell time analytics, and more.

Ajax Hybrid Illumination Cameras

Ajax has introduced three hybrid light illumination cameras: the BulletCam HL, TurretCam HL, and DomeCam Mini HL. The cameras combine IR and white light illumination to deliver color footage even in low-light conditions, for better image quality, more precise object recognition, and visual intruder deterrence at residential and commercial sites. When motion or an object is detected, the devices switch from infrared (IR) to white light and deliver color footage instead of black-and-white. This helps identify vehicle details, clothing colors, and other visual cues that may be less distinct in the IR mode. The white light can also deter intruders, making it clear that they are exposed and being recorded.
